**HAZARDOUS WASTE DETERMINATION
Waste Area Group 4, OU 4-05, Sites CFA-17/-47
CFA 1997 Non-time Critical Removal Action**

I. WASTE STREAM

The waste streams included in this Hazardous waste determination (HWD) include concrete rubble from a gate formerly located at the entrance to the Fire Station Training Area, concrete parking blocks, scrap metal (gate, hydrant, and metal storage cabinet), and railroad ties.

II. WASTE DESCRIPTION

These wastes were generated as a result of "housekeeping" activities after the CFA Non-Time Critical Removal at the Operable Unit 4-05, CFA-17/-47 1997 Non-time Critical Removal Action. The wastes are ancillary materials and equipment at the site, are not contaminated, and were not in contact with contaminated soil at the site. The quantity is approximately 2 cubic yards of solid waste. The waste will not be stored.

III. HAZARDOUS WASTE DETERMINATION

1. Is the material a solid waste?

These materials are solid waste under the definition of 40 CFR 261.2.

2. Is the waste excluded under 40 CFR 261.4?

This waste does not meet the exclusion requirements under 40 CFR 261.4.

3. Is the waste listed under 40 CFR 261 SUBPART D?

No, the waste is not listed under 40 CFR 261 Subpart D and was not exposed to listed wastes.

Is the waste identified under 40 CFR 261 SUBPART C?

These materials do not meet the requirements of RCRA characteristic waste under 40 CFR 261 Subpart C. Process knowledge indicates that these materials are not characteristically hazardous and were not exposed to known contaminants.

4. Is the waste identified under 40 CFR 761?

There is no reason to believe that these wastes are contaminated with PCB.

IV. WASTE TREATMENT/DISPOSAL DETERMINATION

The waste will be disposed as follows:

- concrete rubble – CFA bulky waste landfill
- railroad ties – excess property (#9809872)
- concrete parking blocks - excess property (#9809783)
- scrap metal – excess property (#9809862 and #9809863)
