I read in the Major Projects Monthly report that the HLWTF Project completed in August a subsurface mapping effort using EG+6 & a "military robotic vehicle" & that Carnegie Mellon U. is using a portable "pipe locator". Are you aware? Can you illuminate me?

INEL QUALITY MONTH 1991

Yes, the HLWTF Project is using these devices to try and locate underground utilities in the areas they are planning to characterize. Unfortunately, due to the size of the EG+6 vehicle and the fact that Carnegie Mellon did not have Rad Worker training, no data was collected inside the Tank Farm Area. The report on the other areas has not been received by the HLWTF Group. The HLWTF Group is considering bringing back Carnegie Mellon.
