Disposition of Stockpiled Soil  
Bing-106-83

Mr. F. E. Hicks  
Morrison-Knudsen Co., Inc.  
P. O. Box 1745  
Idaho Falls, ID 83401

Reference: F. E. Hicks, Letter MK-83-E-1792, to G. E. Bingham,  
"Disposition of Stockpiled Low Level Contaminated Soil  
Excavated During the Low Level Waste Project Phase I at  
ICPP - M-K Project S-2258, ICWA 83-49," dated November 28,  
1983.

Dear Mr. Hicks:

The referenced letter requested guidance on handling and disposition of the soil stockpiled from the WL-102 excavation. We would request that you do the following:

1. If you are still wetting the pile, discontinue this practice until next spring. Do not cover with canvas or plastic.
2. Continue to use the stack excavation material for WL-102 backfill.
3. When the stack excavation is complete, use the stockpiled soil for WL-102 backfill. Guidance on the amount of material that can be used in this manner will be provided by M. Cukurs. That is, he will indicate the depth of clean soil that must cover the contaminated backfill.
4. As warmer, dryer weather prevails next spring, resume wetting of the stockpile as directed by M. Cukurs.
5. Dispose of any unused stockpiled contaminated soil as directed by M. Cukurs. Present plans indicate burial in a common pit located between the security fences on the south side of ICPP.

Attached per your request is a copy of Parsons' response on the soil covering the base of the stack and its effect on preventing overturning.

Should you have additional questions on either of these items, please let us know.

Very truly yours,

G. E. Bingham, Manager  
FPFU/FPR Projects
