1.0 Executive Summary

The purpose of the Independent Verification and Validation (IV&V) role in the evaluation of the SAPHIRE (System Analysis Program for Hands-on Integrated Reliability Evaluation) version 8 software product is to assess the activities and practices that are being incorporated into the development of the software. The IV&V team began this endeavor after the software engineering and software development of SAPHIRE version 8 had already been in production. IV&V reviewed SAPHIRE version 8 documentation and evaluated the planned and systematic pattern of all actions necessary to provide adequate confidence that the SAPHIRE version 8 software product conforms to established technical requirements specified within the NUREG/BR-0167 Software Quality Assurance Program and Guidelines, and where applicable, the IEEE Std 1012-2004 Standard for Software Verification and Validation as a secondary reference.

The requirements for development of the SAPHIRE 8 Software Independent Verification and Validation Plan (INL/EXT-09-15649) were extracted primarily from the NUREG/BR-0167 Software Quality Assurance Program and Guidelines but also included an examination of best software engineering methods provided in the IEEE Std 1012-2004 Standard for Software Verification and Validation. Refer to APPENDIX B – IV&V Plan (INL/EXT-09-15649). IV&V developed checklists that mapped these requirements with these standards which were used in the evaluations. The checklists provide comprehensive coverage of the NUREG/BR-0167 Verification and Validation activities associated with Table 3-1 “*Verification and Validation Activities by Major Life Cycle Activity*”. Verification and Validation (V&V) activities associated with Requirements Definition, Design, Implementation, Qualification Testing, and Installation and Acceptance Testing are included in the checklists. Since SAPHIRE version 8 is not yet in maintenance or operations, the V&V activities are not yet applicable.

Traceability of requirements is the greatest of concerns. Requirements traceability is essential to all software development activities. The requirements define the functionality, performance, design constraints, attributes, and external interfaces the software product must satisfy. Without a well documented Requirements Traceability Matrix (RTM), design components may be overlooked, and test cases missed. The requirements form the basis for the software plans, products, and activities.

For IV&V to properly evaluate the original RTM at the beginning of the IV&V effort to assess the mapping of the test cases to design components and to requirements as documented in the SAPHIRE Version 8 Software Verification and Validation Plan (SVVP) Volume I (INL/EXT-05-00821) and SAPHIRE Version 8 Software Verification and Validation Plan Volume II (INL/EXT-05-00821), IV&V had to obtain requirements from the Nuclear Regulatory Commission (NRC) Form 189s, and develop an RTM used for the requirements traceability analysis (file: “*NRC Form 189 Requirements Table.xls*”). The intent of IV&V in developing the RTM used for the requirements traceability analysis is strictly for use in evaluation. The RTM used for the requirements traceability analysis will be included as documentary evidence in the IV&V report provided to the sponsor and the Idaho National Laboratory (INL) Project Manager.

Per the requirements and document outline provided in the SAPHIRE 8 Software Independent Verification and Validation Plan (INL/EXT-09-15649), this report and all subsequent reports will be included as attachments and/or background evidence of the evaluation as well as the results of the SAPHIRE version 8 assessments.

2.0 Background Information

NUREG/BR-0167, Software Quality Assurance Program and Guidelines, requires the development of a planned and systematic pattern of all actions necessary to provide adequate confidence that a software product conforms to established technical requirements and to ensure that the project manager incorporates the sponsor's contractual agreements. The actions necessary include verification and validation activities; documentation and deliverables; project management; configuration management, nonconformance reporting and corrective action; and quality assessment and improvement.

This report provides an evaluation of the SAPHIRE version 8 software product. SAPHIRE version 8 is being developed with a phased or cyclic iterative rapid application development methodology. Due to this approach, a similar approach has been taken for the IV&V activities on each vital software object. IV&V and Software Quality Assurance (SQA) activities occur throughout the entire development life cycle and therefore, will be required through the full development of SAPHIRE version 8. Later phases of the software life cycle, the operation and maintenance phases, are not applicable in this effort since the IV&V is being done prior to releasing Version 8.

The development of SAPHIRE version 8 includes new features and capabilities. These features and capabilities are related to working with larger, more complex models and improving the user-friendliness of the SAPHIRE interfaces while retaining key functionality of SAPHIRE version 7. SAPHIRE version 8 is being developed to support the Simplified Plant Analysis Risk (SPAR) models and to run them as an integrated model (e.g., Level 1 with external events). The graphical user interface has also improved from SAPHIRE version 7 to support NRC programs such as the Significance Determination Process (SDP) and the Accident Sequence Precursor (ASP). A tailored interface for the SDP and the ASP programs is being developed. An interface for general analyses and model construction is also being developed. The interfaces for the SDP, ASP, and general analysis introduce the concept of a “workspace” in which the analyst may run and save different analyses. The use of workspaces enables the user to separate the model construction from the model analysis.

Independent Verification and Validation evaluates and assesses the processes and products developed during each phase of the Software Development Life Cycle (SDLC). The software life cycle provides the basis for planning and implementing a software development or maintenance project. Each major activity is accompanied by verification actions that ensure that the products and processes of the major activity meet the requirements for those products and processes. The SAPHIRE version 8 development team is implementing a “spiral” rapid application approach to the product development. One of the roles that IV&V performs, regardless of the development methodology, is to analyze products developed throughout the development process. The intent is to provide a level of confidence to the sponsor that the quality of the software product and supporting documentation is built into the software, not tested in. Evaluating the supporting documentation for each product is one aspect of providing this level of confidence.

IV&V supports and is complementary to the Quality Assurance, Project Management, and product development activities. To achieve this support, IV&V must also evaluate the processes identified in the documentation to ensure that the development team is implementing the processes and methodology that ensures a high-level software product.

To provide direction in the evaluation process, IV&V has developed checklists to support the requirements for the SDLC. These checklists are included in the SAPHIRE 8 Software Independent Verification and Validation Plan (INL/EXT-09-15649).

3.0 Project Summary

The Nuclear Regulatory Commission (NRC) developed the SAPHIRE computer code for performing probabilistic risk assessments (PRAs) using a personal computer (PC) at the INL under Job Code Number (JCN) L1429. SAPHIRE started out as a feasibility study for a PRA code to be run on a desktop personal PC and evolved through several phases into a state-of-the-art PRA code. The developmental activity of SAPHIRE was the result of two concurrent important events: The tremendous expansion of PC software and hardware capability of the 90s and the onset of a risk-informed regulation era.

Three SAPHIRE versions have been released to date. Version 5 was a DOS version that became a production code a number of years ago. Version 6 was a Windows NT version that became a production code in 1998. Version 7 is also a Windows NT (or above) version that is currently the standard that is being used by the NRC.

Work began on a new version of SAPHIRE, version 8, under JCN Y6394, “*Maintenance and User Support for SAPHIRE Code and Library of PRAs*”. Version 8 is being designed to meet current NRC program needs such as those related to Simplified Plant Analysis Risk (SPAR) model development, the Significance Determination Process (SDP) program, the Risk Assessment Standardization Project (RASP), as well as the Accident Sequence Precursor (ASP) Program. Development of version 8 continued under JCN N6203, “*Maintain and Support SAPHIRE Code and Library*”. JCN N6423 “*SAPHIRE version 8*” will support the beta and final version 8, testing, verification, and validation.

The organizational structure of the SAPHIRE version 8 software development team influences and controls the software quality. Roles and responsibilities within the organizational structure provide the development team with the freedom, flexibility and objectivity to evaluate and monitor the software quality as well as verify problem resolutions. This structure enables the development team to tailor the maintenance and development activities, techniques, and methodologies for problem identification, reporting and resolution, testing, records retention, and configuration management.

The SAPHIRE 8 Software Independent Verification and Validation Plan (INL/EXT-09-15649) is structured around NUREG/BR-0167, Software Quality Assurance Program and Guidelines, February 1993. The Nuclear Regulatory Research Office Instruction No.: PRM-12, Software Quality Assurance for Office of Research (RES) Sponsored Codes, March 26, 2007 specifies that RES-sponsored software is to be evaluated against NUREG/BR-0167. Per the guidance in NUREG/BR-0167, SAPHIRE is classified as “Level 1.” Level 1 software corresponds to technical application software used in a safety decision. SAPHIRE version 8 will follow the requirements for Level 1 software defined in Section 1.2 of NUREG/BR-0167. The NRC will perform an audit of the software Quality Assurance (QA) implementation once a year against the requirement of NUREG/BR-0167.

The required software activities and contractual commitments; planning process and details of managing the SAPHIRE version 8 project along with project tracking and oversight; risk management; nonconformance reporting and corrective action; the developer’s approach to quality assessment and improvement; design completion criteria; and the overall verification and validation plan are explained in the Software Project Plan (INL/EXT-09-15853) for SAPHIRE version 8.

The software quality assurance activities that include both management and technical aspects of software development and maintenance are specified in the Software Quality Assurance Plan (INL/EXT-09-16697) for SAPHIRE version 8.

The required activities associated with configuration management such as; Identifying and defining project baselines, including or referencing procedures for: change control; determining status of baselines, proposed changes, and implemented changes; release control; the software development library; and code, access, and media control are specified in the Software Configuration Management Plan (INL/EXT-09-16696) for SAPHIRE version 8, the Software Quality Assurance Plan (INL/EXT-09-16697) for SAPHIRE version 8 and the Software Project Plan (INL/EXT-09-15853) for SAPHIRE version 8.

The software requirements describing functionality, performance, design constraints, attributes, and external interfaces from the NRC Form 189s that the SAPHIRE version 8 software must satisfy are listed in the SAPHIRE Version 8 Software Verification and Validation Plan – Volume I, section 2 Software Requirements and section 3 Interface Requirements Specification (INL/EXT-05-00821).

Design components specifying the overall structure of the software so that it can be translated into code and meet the requirements defined in the software requirements documentation, are in the SAPHIRE Version 8 Software Verification and Validation Plan – Volume I, section 4, Design Specification (INL/EXT-05-00821).

The test specification, test methodologies, test phases; and development and test environment for acceptance tests that will be used to demonstrate that SAPHIRE version 8 is ready for official release are listed in the SAPHIRE Version 8 Software Verification and Validation Plan Volume II (INL/EXT-05-00821). Included in Appendix D of this document is the requirements traceability matrix. This matrix when complete will provide the mapping of the test cases to design components and to requirements. Appendix C contains the Modula-2 and Delphi coding standards.

Information prescribing the approach to be taken for intended testing activities is specified in the System Test Plan (INL/EXT-09-16455) for SAPHIRE version 8.

The acceptance tests and test acceptance criteria that will be used to formally test the implemented software and reviewing and analyzing the test results to ensure that the implemented software meets requirements and that the software produces correct results for all test cases executed and demonstrate that SAPHIRE version 8 is ready for official release are listed in the Software Acceptance Test Plan (INL/EXT-09-16236) for SAPHIRE version 8.

NUREG/BR-0167 section 2.4 Implementation and section 4.5 Software Implementation Documentation require documentation that includes unit designs (Usually presented as a commentary prologue to the unit's source code) and the unit code itself. This process is the set of activities that results in software that has been constructed in accordance with the design documentation and coding standards; and undergone informal unit and integration testing. The SAPHIRE version 8 coding standard used for spot check evaluations of the Modula-2 and Delphi code is located in the SAPHIRE Version 8 Software Verification and Validation Plan – Volume II, Appendix C Coding Standards (INL/EXT-05-00821). More rigorous reviews may be considered at higher levels for life cycle activities such as “Implementation” and/or “Test” if the schedule and budget permit. The software evaluation tools for evaluating the SAPHIRE version 8 software are Coverage Validator, Memory Validator, Performance Validator and Thread Validator. Another source code analysis and verification tool, CodeHealer, is used to detect mistakes and inconsistencies in the SAPHIRE version 8 software.

It is the insight of the Independent Verification and Validation after performing the SAPHIRE version 8 assessment that the SAPHIRE version 8 software project development team, according to the requirements specified in NUREG/BR-0167 Software Quality Assurance Program and Guidelines for Level 1 software defined in Section 1.2 of NUREG/BR-0167, are implementing

and currently following all actions necessary to provide adequate confidence that the SAPHIRE version 8 software product conforms to established technical requirements.

4.0 Summary of Findings

NUREG/BR-0167, Software Quality Assurance Program and Guidelines, requires the development of a planned and systematic pattern of all actions necessary to provide adequate confidence that a software product conforms to established technical requirements. The software life cycle provides the basis for planning and implementing a software development or maintenance project. Each major activity leads to specific products that can be measured, evaluated, approved, and controlled. Each major activity is accompanied by verification actions that ensure that the products and processes of the major activity meet the requirements for those products and processes; and meet the contractual commitments prepared by the sponsor; the Nuclear Regulatory Commission. The following sections present the verification and validation findings of the SAPHIRE version 8 product.

The requirements for IV&V review were extracted primarily from the NUREG/BR-0167 Software Quality Assurance Program and Guidelines, but also included an examination of best software engineering methods provided in the IEEE Standard for Software Verification and Validation. IV&V developed checklists that mapped these requirements with these standards which were used in the evaluations.

The IV&V team began this endeavor after the software engineering and software development of SAPHIRE version 8 had already been in production.

4.1 Software Project Plan including Project Tracking and Oversight

The purpose of the Independent Verification and Validation role in the evaluation of the SAPHIRE 8 Software Project Plan is to assess the activities and practices that will be incorporated in the development of the software. The IV&V team reviewed the plan to evaluate the development team's methods to integrate the project management, quality assurance practices, and development methodology against the requirements specified in NUREG/BR-0167 as well as IEEE-1012-98.

NUREG/BR-0167, Software Quality Assurance Program and Guidelines, requires the development of a Software Project Plan that details the process for managing the software project and to ensure that the project manager incorporates the sponsor's contractual agreements. The Software Project Plan activities that must be performed include Project Planning and Organization as well as Project Tracking and Oversight.

The Software Project Plan is intended to provide the high-level direction that documents the required software activities to meet the contractual commitments.

Independent Verification and Validation Of SAPHIRE 8 Software Project Plan Document ID: INL/EXT-09-17022 Revision 0 Effective Date: October 13, 2009.

An Independent Verification and Validation evaluation of the Software Project Plan Document ID: INL/EXT-09-15853 for SAPHIRE 8 was performed. The checklist containing the criteria for the requirements of the Project Plan as well as the Project Tracking and Oversight was extracted from the SAPHIRE IV&V Plan for use in evaluating the SOFTWARE PROJECT PLAN for SAPHIRE Version 8 N6423, INL/EXT-09-15853. There were thirty-nine criteria identified for the assessment. Although IV&V failed eleven of the criteria (28%), many of these failures can be corrected easily as many were minor. One criterion (#32) could not be assessed as there was insufficient information to assess the criteria at this time. Also, one criterion (#26) was considered to be not applicable as IV&V will observe acceptance testing and will not perform separate acceptance testing activities. Finally, IV&V passed some of the criteria but also

requested/included in these criteria, suggestions for improvement and/or where additional detail would have been helpful.

Independent Verification and Validation Of SAPHIRE 8 Software Project Plan Document ID: INL/EXT-09-17022 Revision 1 Effective Date: December 15, 2009.

An Independent Verification and Validation evaluation of the Software Project Plan Document ID: INL/EXT-09-15853 for SAPHIRE 8 was performed. The checklist containing the criteria for the requirements of the Software Project Plan as well as the Project Tracking and Oversight was extracted from the SAPHIRE IV&V Plan for use in evaluating the SOFTWARE PROJECT PLAN for SAPHIRE Version 8 N6423, INL/EXT-09-15853. There were thirty-eight criteria identified for the assessment. Although IV&V failed four of the criteria (11%), many of these failures can be corrected easily as they are minor. One criterion (#31) could not be assessed as there was insufficient information to assess the criteria at this time.

Independent Verification and Validation Of SAPHIRE 8 Software Project Plan Document ID: INL/EXT-09-17022 Revision 2 Effective Date: March 09, 2010.

An Independent Verification and Validation evaluation of the Software Project Plan Document ID: INL/EXT-09-15853 for SAPHIRE 8 was performed. The checklist containing the criteria for the requirements of the Software Project Plan as well as the Project Tracking and Oversight was extracted from the SAPHIRE IV&V Plan for use in evaluating the SOFTWARE PROJECT PLAN for SAPHIRE Version 8 N6423, INL/EXT-09-15853. Of the thirty-eight criteria listed for the required information to be provided within the SAPHIRE 8 Software Project Plan all criteria were satisfied.

4.2 Risk Management Plan

The purpose of the Independent Verification and Validation role in the evaluation of the SAPHIRE risk management is to assess the activities that results in the process to identify, assess, document, and rank technical, cost, resource, and schedule risks associated with the SAPHIRE software product.

NUREG/BR-0167, Software Quality Assurance Program and Guidelines, requires the development of risk management activities that:

1. Identify, assess, document, and rank technical, cost, resource, and schedule risks.
2. Develop a risk mitigation plan.
3. Formalize the risk management program.
4. Review the risk management program regularly.

Risk management is intended to ensure a methodology for conducting risk management planning, identification, analysis, responses, and monitoring and control activities associated with the SAPHIRE project work.

Independent Verification and Validation Of SAPHIRE 8 Risk Management Document ID: INL/EXT-09-17207 Revision 0 Effective Date: November 13, 2009.

An Independent Verification and Validation evaluation of risk management within the Software Project Plan Document ID: INL/EXT-09-15853 for SAPHIRE 8 was performed. The checklist containing the criteria for the requirements of the SAPHIRE 8 risk management was extracted from the SAPHIRE 8 Software Independent Verification and Validation Plan Document ID: INL/EXT-09-15649. Of the three criteria listed for the required information to be provided within the SAPHIRE 8 risk management all criteria were satisfied. It is the recommendation of IV&V that a Risk Management and Risk Mitigation plan be developed for the SAPHIRE 8 software development.

4.3 Software Quality Assurance Plan

The purpose of the Independent Verification and Validation role in the evaluation of the SAPHIRE Software Quality Assurance Plan is to assess the planned and systematic pattern of all actions necessary to provide adequate confidence that a software product conforms to established technical requirements.

NUREG/BR-0167, Software Quality Assurance Program and Guidelines, requires the development of software quality assurance activities that includes both management and technical aspects of software development and maintenance.

The Software Quality Assurance Plan is intended to ensure all actions necessary for the software life cycle; verification and validation activities; documentation and deliverables; project management; configuration management, nonconformance reporting and corrective action; and quality assessment and improvement have been planned and a systematic pattern of all actions necessary to provide adequate confidence that a software product conforms to established technical requirements.

**Independent Verification and Validation Of SAPHIRE 8 Software Quality Assurance Plan
Document ID: INL/EXT-10-17828 Revision 0 Effective Date: February 08, 2010.**

An Independent Verification and Validation evaluation of the Software Quality Assurance Plan Document ID: INL/EXT-09-16697 for SAPHIRE 8 was performed. The evaluation criteria were extracted from the guidance specified in NUREG/BR-0167, Software Quality Assurance Program and Guidelines. Of the criteria listed for the required information to be provided within the Software Quality Assurance Plan all criteria were satisfied. Minor corrections for the Software Quality Assurance Plan are listed.

**Independent Verification and Validation Of SAPHIRE 8 Software Quality Assurance Plan
Document ID: INL/EXT-10-17828 Revision 1 Effective Date: March 01, 2010.**

An Independent Verification and Validation evaluation of the Software Quality Assurance Plan Document ID: INL/EXT-09-16697 for SAPHIRE 8 was performed. The evaluation criteria were extracted from the guidance specified in NUREG/BR-0167, Software Quality Assurance Program and Guidelines. Of the criteria listed for the required information to be provided within the Software Quality Assurance Plan all criteria were satisfied.

4.4 Software Configuration Management Plan

The purpose of the Independent Verification and Validation role in the evaluation of the SAPHIRE configuration management is to assess the activities that results in the process of identifying and defining the baselines associated with the SAPHIRE software product; controlling the changes to baselines and release of baselines throughout the life cycle; recording and reporting the status of baselines and the proposed and actual changes to the baselines; and verifying the correctness and completeness of baselines.

NUREG/BR-0167, Software Quality Assurance Program and Guidelines, requires the development of configuration management activities that establish and maintain integrity of the software and its documentation as they evolve throughout the life cycle. The four major functions of configuration management include:

1. The identification and establishment of baselines.
2. Controlling both changes to baselines and the release of baselines.

3. Recording and reporting the status of baselines, change requests, and implemented changes.
4. Verifying, through auditing, the correctness and completeness of baselines prior to release.

The Software Configuration Management Plan is intended to ensure the content and status of the software and documentation baselines are known at all times; the developer follows a written configuration management policy that has the following characteristics: (a) Responsibility for configuration management for each project is explicitly assigned. (b) Configuration management is implemented on products throughout the product's life cycle. (c) Configuration management is implemented for externally-deliverable products and for appropriate products used inside the organization. (d) All projects have a repository for storing key software engineering elements and associated configuration management records. (e) The software baselines and configuration management activities are audited on a regular basis; a group that is responsible for coordinating and implementing configuration management for the project exists or is established; adequate resources and budget for performing configuration management activities are provided; members of the configuration management group are trained in the objectives, procedures, and methods for performing their assigned activities; the configuration management activities are reviewed with the project manager on a regular basis.

Independent Verification and Validation Of SAPHIRE 8 Software Configuration Management Plan Document ID: INL/EXT-09-17141 Revision 0 Effective Date: October 20, 2009.

An Independent Verification and Validation evaluation of the Software Configuration Management Plan Document ID: INL/EXT-09-16696 for SAPHIRE 8 was performed. The checklist containing the criteria for the requirements of the SAPHIRE 8 Software Configuration Management Plan was extracted from the SAPHIRE 8 Software Independent Verification and Validation Plan Document ID: INL/EXT-09-15649. Of the twelve criteria listed for the required information to be provided within the Software Configuration Management Plan two failed. Minor corrections for the Software Configuration Management Plan are listed.

Independent Verification and Validation Of SAPHIRE 8 Software Configuration Management Plan Document ID: INL/EXT-09-17141 Revision 1 Effective Date: February 01, 2010.

An Independent Verification and Validation evaluation of the Software Configuration Management Plan Document ID: INL/EXT-09-16696 for SAPHIRE 8 was performed. The checklist containing the criteria for the requirements of the SAPHIRE 8 Software Configuration Management Plan was extracted from the SAPHIRE 8 Software Independent Verification and Validation Plan Document ID: INL/EXT-09-15649. Of the twelve criteria listed for the required information to be provided within the SAPHIRE 8 Software Configuration Management Plan all criteria were satisfied. Documentation and procedures required to be included within configuration management are currently being implemented.

4.5 Software Requirements

The purpose of the Independent Verification and Validation role in the evaluation of the SAPHIRE version 8 requirements definition is to assess the activities that results in the specification, documentation, and review of the requirements that the software product must satisfy, including functionality, performance, design constraints, attributes and external interfaces. IV&V reviewed the requirements specified in the NRC Form 189s to verify these

requirements were included in the SAPHIRE Version 8 Software Verification and Validation Plan (SVVP) Volume I (INL/EXT-05-00821).

NUREG/BR-0167, Software Quality Assurance Program and Guidelines, requires the development of Software Requirements Documentation that specifies the requirements that the software to be developed/maintained must meet. An item can be called a software requirement only if its achievement can be verified and validated. It is important that each software requirement be traceable throughout the stages of the software life cycle.

The Software Requirements Documentation is intended to provide the specification, documentation, and review of the requirements.

Independent Verification and Validation Of SAPHIRE 8 Software Requirements Document ID: INL/EXT-09-16789 Revision 0 Effective Date: September 30, 2009.

An Independent Verification and Validation evaluation of the Software Verification and Validation Plan – Volume I, section 2 Software Requirements and section 3 Interface Requirements Specification, Document ID: INL/EXT-05-00821 for SAPHIRE 8 was performed. The requirements are included in section 2 Software Requirements and section 3 Interface Requirements Specification within the SAPHIRE Version 8 Software Verification and Validation Plan Volume I Document ID: INL/EXT-05-00821. Section 2 Software Requirements, states “*The requirements are briefly described in NRC Form 189, Y6394, Revision 11 and NRC Form 189 N6203, Revision 3*”. Section 2.1 Graphical User Interface Requirements, states “*The graphical user interface (GUI) requirements are described in NRC Form 189, Revision 10, subtasks 9.5 and 9.6*”. Requirements are also found in:

- NRC Form 189, Y6394, Revision 7,
- NRC Form 189, N6423, Revision 0 and
- NRC Form 189, N6423, Revision 5.

There is no Software Requirements Documentation containing all requirements.

The requirements are not all documented or uniquely identified, but requirements that are documented are specified in paragraphs and referenced in the Requirements Traceability Matrix as section numbers within the SAPHIRE Version 8 Software Verification and Validation Plan Volume I. Sentences within paragraphs containing the words “shall” and “will” are assumed requirements. Other sentences containing the words “is”, “must”, “can be” and “are” were assumed requirements. Since multiple requirements are specified within paragraphs and not uniquely identified, traceability and testability of individual requirements will be difficult and violates sound software engineering practices. Of the twenty-one criteria listed for the required information to be provided within the Software Requirements Documentation twenty failed.

Independent Verification and Validation Of SAPHIRE 8 Software Requirements Document ID: INL/EXT-09-16789 Revision 1 Effective Date: March 25, 2010.

An Independent Verification and Validation evaluation of the Software Verification and Validation Plan – Volume I, section 2 Software Requirements and section 3 Interface Requirements Specification, Document ID: INL/EXT-05-00821 for SAPHIRE 8 was performed. The checklist containing the criteria for the requirements of the SAPHIRE 8 requirements definition was extracted from the SAPHIRE 8 Software Independent Verification and Validation Plan Document ID: INL/EXT-09-15649. Of the twenty-one criteria listed for the required information to be provided within the Software Requirements Documentation six failed. In order for these criteria to pass, the requirements in section 2 Software Requirements and section 3 Interface Requirements Specification within the Software Verification and Validation Plan – Volume I need to be uniquely identified. Minor corrections for the Software Verification and

Validation Plan – Volume I sections 2 Software Requirements and 3 Interface Requirements Specification are listed.

SAPHIRE 8 Requirements Traceability Matrix (RTM) Dated: April 20, 2010.

The Requirements Traceability Matrix dated April 20, 2010 was reviewed by IV&V. The information provided within this RTM shows the traceability of requirements to design components and test cases. The requirements are uniquely identified as functional, performance, design constraints, attributes and external interface requirements and have been updated in the Software Verification and Validation Plan – Volume I sections 2 Software Requirements and 3 Interface Requirements Specification. Design components have been uniquely identified and are currently being updated in section 4 Design Specification within the SAPHIRE Version 8 Software Verification and Validation Plan Volume I (INL/EXT-05-00821). Test case identifiers are currently being updated to show the testability of the requirements.

4.6 Software Design and Interface Design

The purpose of the Independent Verification and Validation role in the evaluation of the SAPHIRE 8 software design and interface design is to assess the activities that results in the development, documentation, and review of a software design that meets the requirements defined in the software requirements documentation. IV&V reviewed the requirements specified in the NRC Form 189s to verify these requirements were included in the SAPHIRE Version 8 Software Verification and Validation Plan (SVVP) Volume I (INL/EXT-05-00821) section 4 Design Specification.

NUREG/BR-0167, Software Quality Assurance Program and Guidelines, requires the development of Software Design Documentation that specifies the overall structure of the software so that it can be translated into code. The Software Design Documentation includes a description of the major elements of the software as they relate to the requirements; a description of the theoretical basis, physical model, mathematical model, control flow, data flow, control logic, and data structure; and an identification and detailed definition of the software units and data elements of the software architecture.

The Software Design Documentation is intended to provide the development, documentation, and review of the software design that meets the requirements defined in the Software Requirements Documentation.

Independent Verification and Validation Of SAPHIRE 8 Software Design and Interface Design Document ID: INL/EXT-09-17069 Revision 0 Effective Date: October 20, 2009.

An Independent Verification and Validation evaluation of the Software Verification and Validation Plan – Volume I, section 4 Design Specification, Document ID: INL/EXT-05-00821 and the Software Verification and Validation Plan – Volume II, Document ID: INL/EXT-05-00821 for SAPHIRE 8 was performed. The design is included in section 4 Design Specification within the SAPHIRE Version 8 Software Verification and Validation Plan Volume I. A requirements traceability analysis was performed to trace design components to requirements, and requirements and design components to test cases. The results of the requirements traceability analysis is in attachment NRC Form 189 Requirements Table.xls.

There is no Software Design Documentation containing all design components that meet the requirements.

The software design does not completely meet the requirements defined in the SAPHIRE Version 8 Software Verification and Validation Plan Volume I section 2 Software Requirements and section 3 Interface Requirements Specification. The software design needs to specify the

overall structure of the software so that it can be translated into code. The consistency of detail between design components and software requirements varies.

The design components are not all documented or uniquely identified, but design components that are documented are specified in paragraphs and referenced in the Requirements Traceability Matrix as section numbers within the SAPHIRE Version 8 Software Verification and Validation Plan Volume I. Of the fifteen criteria listed for the required information to be provided within the Software Design Documentation thirteen failed.

Independent Verification and Validation Of SAPHIRE 8 Software Design and Interface Design Document ID: INL/EXT-09-17069 Revision 1 Effective Date: March 24, 2010.

An Independent Verification and Validation evaluation of the Software Verification and Validation Plan – Volume I, section 4 Design Specification, Document ID: INL/EXT-05-00821 and the Software Verification and Validation Plan – Volume II, Document ID: INL/EXT-05-00821 for SAPHIRE 8 was performed. The checklist containing the criteria for the requirements of the SAPHIRE 8 design was extracted from the SAPHIRE 8 Software Independent Verification and Validation Plan Document ID: INL/EXT-09-15649. A requirements traceability analysis was performed to trace design components to requirements, and requirements and design components to test cases. The results of the requirements traceability analysis is in attachment NRC Form 189 Requirements Table.xls. Of the fifteen criteria listed for the required information to be provided within the Software Design Documentation four failed. Minor corrections for the Software Verification and Validation Plan – Volume I section 4 Design Specification and the Software Verification and Validation Plan – Volume II are listed.

4.7 System Test Plan

The purpose of the Independent Verification and Validation role in the evaluation of the SAPHIRE System Test Plan is to assess the approach to be taken for intended testing activities associated with the SAPHIRE software product.

NUREG/BR-0167, Software Quality Assurance Program and Guidelines, requires the development of a document prescribing the approach to be taken for intended testing activities.

Testing is the process of exercising or evaluating a software product or part of a software product by manual or automated means to verify that it satisfies specified requirements or to identify differences between expected and actual results.

The System Test Plan is intended to identify the items to be tested, the requirements being tested, the testing to be performed, test schedules, personnel requirements, reporting requirements, evaluation criteria, and any risks requiring contingency planning.

Independent Verification and Validation Of SAPHIRE 8 System Test Plan Document ID: INL/EXT-10-17816 Revision 0 Effective Date: February 05, 2010.

An Independent Verification and Validation evaluation of the System Test Plan Document ID: INL/EXT-09-16455 for SAPHIRE 8 was performed. The checklist containing the criteria for the requirements of the SAPHIRE 8 System Test Plan was extracted from the SAPHIRE 8 Software Independent Verification and Validation Plan Document ID: INL/EXT-09-15649. Of the three criteria listed for the required information to be provided within the SAPHIRE 8 System Test Plan all criteria were satisfied.

4.8 Software Acceptance Test Plan

The purpose of the Independent Verification and Validation role in the evaluation of the SAPHIRE 8 Software Acceptance Test Plan is to assess the approach to be taken for intended testing activities. The plan typically identifies the items to be tested, the requirements being tested, the testing to be performed, test schedules, personnel requirements, reporting requirements, evaluation criteria, and any risks requiring contingency planning.

NUREG/BR-0167, Software Quality Assurance Program and Guidelines, requires the development of a testing process of exercising or evaluating a software product or part of a software product by manual or automated means to verify that it satisfies specified requirements or to identify differences between expected and actual results. Testing approaches depend on the number of levels of testing. For most cases, four levels of testing are sufficient: (1) Unit testing, (2) Integration testing, (3) Qualification testing, and (4) Acceptance testing.

The Software Acceptance Test Plan is intended to ensure the SAPHIRE software product testing activities and reporting results in accordance with an approved test plan satisfies the specified requirements.

**Independent Verification and Validation Of SAPHIRE 8 Software Acceptance Test Plan
Document ID: INL/EXT-10-18081 Revision 0 Effective Date: March 10, 2010.**

An Independent Verification and Validation evaluation of the Software Acceptance Test Plan Document ID: INL/EXT-09-16236 for SAPHIRE 8 was performed. The evaluation criteria were extracted from the guidance specified in NUREG/BR-0167, Software Quality Assurance Program and Guidelines. All requirements from NUREG/BR-0167, Software Quality Assurance Program and Guidelines were satisfied. Minor corrections for the Software Acceptance Test Plan are listed.

4.9 Volume 3 Users' Guide

The purpose of the Independent Verification and Validation role in the evaluation of the SAPHIRE 8 Volume 3 Users' Guide is to assess the user documentation for its completeness, correctness, and consistency with respect to requirements for user interface and for any functionality that can be invoked by the user.

NUREG/BR-0167, Software Quality Assurance Program and Guidelines, requires the development of user documentation with respect to requirements for user interface and for any functionality that can be invoked by the user and in planning an acceptance test that is representative of the operational environment. User documentation includes:

1. A description of the user's interaction with the software, and a description of any required training necessary to use the software.
2. Input and output specifications and formats, including sample cases.
3. A description of the limitations of the software.
4. A description of anticipated errors and how the user can respond.
5. For each error message, provide the message, an explanation of the message, how the message may have come about, and actions that may or should be taken.
6. Information about obtaining user and sustaining engineering support.

The SAPHIRE 8 Volume 3 Users' Guide is intended to provide readability and effectiveness to end users.

**Independent Verification and Validation Of SAPHIRE 8 Volume 3 Users' Guide Document
ID: INL/EXT-10-18081 Revision 0 Effective Date: March 10, 2010.**

An Independent Verification and Validation evaluation of the Volume 3 Users' Guide for SAPHIRE 8 was performed. The checklist containing the criteria for the requirements of the SAPHIRE 8 Volume 3 Users' Guide was extracted from the SAPHIRE 8 Software Independent Verification and Validation Plan Document ID: INL/EXT-09-15649. Of the five criteria listed for the required information to be provided within the SAPHIRE 8 Volume 3 Users' Guide three failed. Minor corrections for the SAPHIRE 8 Volume 3 Users' Guide are listed.

5.0 Summary of Analysis

The Software Project Plan Document ID: INL/EXT-09-15853 for SAPHIRE 8 is intended to provide the high-level direction that documents the required software activities to meet the contractual commitments prepared by the sponsor; the Nuclear Regulatory Commission. Of the thirty-eight criteria listed for the required information to be provided within the SAPHIRE 8 Software Project Plan all criteria were satisfied.

Risk management within the Software Project Plan Document ID: INL/EXT-09-15853 for SAPHIRE 8 is intended to ensure a methodology for conducting risk management planning, identification, analysis, responses, and monitoring and control activities associated with the SAPHIRE project work, and to meet the contractual commitments prepared by the sponsor; the Nuclear Regulatory Commission. Of the three criteria listed for the required risk management information to be provided within the SAPHIRE 8 Software Project Plan all criteria were satisfied. It is the recommendation of IV&V that a Risk Management and Risk Mitigation plan be developed for the SAPHIRE 8 software development.

The Software Quality Assurance Plan Document ID: INL/EXT-09-16697 for SAPHIRE 8 is intended to ensure all actions necessary for the software life cycle; verification and validation activities; documentation and deliverables; project management; configuration management, nonconformance reporting and corrective action; and quality assessment and improvement have been planned and a systematic pattern of all actions necessary to provide adequate confidence that a software product conforms to established technical requirements; and to meet the contractual commitments prepared by the sponsor; the Nuclear Regulatory Commission. Of the criteria listed for the required information to be provided within the SAPHIRE 8 Software Quality Assurance Plan all criteria were satisfied.

The Software Configuration Management Plan Document ID: INL/EXT-09-16696 for SAPHIRE 8 is intended to ensure the content and status of the software and documentation baselines are known at all times; the developer follows a written configuration management policy that has the following characteristics: (a) Responsibility for configuration management for each project is explicitly assigned. (b) Configuration management is implemented on products throughout the product's life cycle. (c) Configuration management is implemented for externally-deliverable products and for appropriate products used inside the organization. (d) All projects have a repository for storing key software engineering elements and associated configuration management records. (e) The software baselines and configuration management activities are audited on a regular basis; a group that is responsible for coordinating and implementing configuration management for the project exists or is established; adequate resources and budget for performing configuration management activities are provided; members of the configuration management group are trained in the objectives, procedures, and methods for performing their assigned activities; the configuration management activities are reviewed with the project manager on a regular basis, and to meet the contractual commitments prepared by the sponsor; the Nuclear Regulatory Commission. Of the twelve criteria listed for the required information to be provided within the SAPHIRE 8 Software Configuration Management Plan all criteria were satisfied.

The Software Verification and Validation Plan – Volume I, section 2 Software Requirements and section 3 Interface Requirements Specification, Document ID: INL/EXT-05-00821 for SAPHIRE 8 is intended to provide the specification, documentation, and review of the requirements to meet the contractual commitments prepared by the sponsor; the Nuclear Regulatory Commission. Of the 21 criteria listed for the required information to be provided within section 2 Software Requirements and section 3 Interface Requirements Specification 6

failed. Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Requirements Revision 1 Document ID: INL/EXT-09-16789.

The Software Verification and Validation Plan – Volume I, section 4 Design Specification, Document ID: INL/EXT-05-00821 for SAPHIRE 8 is intended to provide the development, documentation, and review of the software design that meets the requirements defined in section 2 Software Requirements and section 3 Interface Requirements Specification and to meet the contractual commitments prepared by the sponsor; the Nuclear Regulatory Commission. Of the 15 criteria listed for the required information to be provided within section 4 Design Specification 4 failed. Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Design and Interface Design Revision 1 Document ID: INL/EXT-09-17069.

The Software Verification and Validation Plan – Volume II, Document ID: INL/EXT-05-00821 for SAPHIRE 8 is intended to address the Test Plan and Test Suite for validating the software along with the acceptance criteria for specifying how to determine the validity of the software given the results of the test cases and to meet the contractual commitments prepared by the sponsor; the Nuclear Regulatory Commission. The criteria listed for the required information to be provided was evaluated with the Software Verification and Validation Plan – Volume I, section 4 Design Specification, Document ID: INL/EXT-05-00821 for SAPHIRE 8. Of the criteria listed for the required information to be provided within the Software Verification and Validation Plan – Volume II all criteria were satisfied. Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Design and Interface Design Revision 1 Document ID: INL/EXT-09-17069 for minor corrections for the Software Verification and Validation Plan – Volume II.

The Requirements Traceability Matrix for SAPHIRE 8 is intended to provide traceability from requirements to design components to test cases and to meet the contractual commitments prepared by the sponsor; the Nuclear Regulatory Commission. The criteria listed for the required information to be provided was evaluated with the Software Verification and Validation Plan – Volume I, section 2 Software Requirements, section 3 Interface Requirements Specification and section 4 Design Specification, Document ID: INL/EXT-05-00821 for SAPHIRE 8. Of the criteria listed for the required information to be provided within the Requirements Traceability Matrix most failed. Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Requirements Revision 1 Document ID: INL/EXT-09-16789 and the Independent Verification and Validation Of SAPHIRE 8 Software Design and Interface Design Revision 1 Document ID: INL/EXT-09-17069.

The Data Dictionary, file “saphire-data-dictionary.html” for SAPHIRE 8 is intended to provide items computed in the code, what they are and what they do and to meet the contractual commitments prepared by the sponsor; the Nuclear Regulatory Commission. Currently the Data Dictionary contains only database table names, descriptions of the database tables and data types, data lengths and key information. The criteria listed for the required information to be provided was evaluated with the Software Verification and Validation Plan – Volume I, section 4 Design Specification, Document ID: INL/EXT-05-00821 for SAPHIRE 8. IV&V passed this criterion based on *“the Data Dictionary has been developed”*. It is the recommended by IV&V that the Data Dictionary also contain items computed in the code, what they are and what they do. Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Design and Interface Design Revision 1 Document ID: INL/EXT-09-17069.

The System Test Plan Document ID: INL/EXT-09-16455 for SAPHIRE 8 is intended to identify the items to be tested, the requirements being tested, the testing to be performed, test schedules, personnel requirements, reporting requirements, evaluation criteria, and any risks requiring contingency planning and to meet the contractual commitments prepared by the sponsor; the

Nuclear Regulatory Commission. Of the three criteria listed for the required information to be provided within the SAPHIRE 8 System Test Plan all criteria were satisfied.

The Software Acceptance Test Plan Document ID: INL/EXT-09-16236 for SAPHIRE 8 is intended to ensure the SAPHIRE software product testing activities and reporting results in accordance with an approved test plan satisfies the specified requirements and to meet the contractual commitments prepared by the sponsor; the Nuclear Regulatory Commission. Of the seventeen criteria listed for the required information to be provided within the SAPHIRE 8 Software Acceptance Test Plan all criteria were satisfied. Minor corrections for the SAPHIRE 8 Software Acceptance Test Plan are provided in the Independent Verification and Validation Of SAPHIRE 8 Software Acceptance Test Plan Revision 0 Document ID: INL/EXT-10-18081.

The Volume 3 Users' Guide for SAPHIRE 8 is intended to provide readability and effectiveness to end users, and to meet the contractual commitments prepared by the sponsor; the Nuclear Regulatory Commission. Of the five criteria listed for the required information to be provided within the Volume 3 Users' Guide for SAPHIRE 8 three failed. Refer to the Independent Verification and Validation Of SAPHIRE 8 Volume 3 Users' Guide Revision 0 Document ID: INL/EXT-10-18028.

Code Walkthroughs are intended to verify that various naming and coding conventions documented in the Software Verification and Validation Plan – Volume II Appendix C Coding Standards, Document ID: INL/EXT-05-00821 for SAPHIRE 8 are being implemented. Common mistakes are in headers, commenting, indenting, and some use of the “with” statements. Suggestions for the checklist used for the code walkthroughs and the coding standard are pending.

6.0 Summary of Recommendations

The Software Project Plan Document ID: INL/EXT-09-15853 for SAPHIRE 8. Of the thirty-eight criteria listed for the required information to be provided within the SAPHIRE 8 Software Project Plan all criteria were satisfied.

Risk management within the Software Project Plan Document ID: INL/EXT-09-15853 for SAPHIRE 8. Of the three criteria listed for the required risk management information to be provided within the SAPHIRE 8 Software Project Plan all criteria were satisfied. It is the recommendation of IV&V that a Risk Management and Risk Mitigation plan be developed for the SAPHIRE 8 software development. NUREG/BR-0167 Software Quality Assurance Program and Guidelines section 5.8 Risk Management bullet 1 specifies “*The following activities are typical of a risk management program: Identify, assess, document, and rank technical, cost, resource, and schedule risks*”.

The Software Quality Assurance Plan Document ID: INL/EXT-09-16697 for SAPHIRE 8. Of the criteria listed for the required information to be provided within the SAPHIRE 8 Software Quality Assurance Plan all criteria were satisfied.

The Software Configuration Management Plan Document ID: INL/EXT-09-16696 for SAPHIRE 8. Of the twelve criteria listed for the required information to be provided within the SAPHIRE 8 Software Configuration Management Plan all criteria were satisfied. IV&V recommends referring to NUREG-BR-0167 Software Quality Assurance Program and Guidelines, section 6.2 Baselines for reference to all required information to be included in baselines. Section 1.3 does not specifically address the items included in the baselines; referring to NUREG-BR-0167 Software Quality Assurance Program and Guidelines, section 6.3 Change Control for reference to all required information to be included in the change control procedure; referring to NUREG-BR-0167 Software Quality Assurance Program and Guidelines, section 6.6 Software, Access, and Media Control for reference to all required information to be included in the software, access, and media control procedure.

The Software Verification and Validation Plan – Volume I, section 2 Software Requirements and section 3 Interface Requirements Specification, Document ID: INL/EXT-05-00821 for SAPHIRE 8. Of the 21 criteria listed for the required information to be provided within section 2 Software Requirements and section 3 Interface Requirements Specification 6 failed. Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Requirements Revision 1 Document ID: INL/EXT-09-16789 for the specific parts of the NUREG/BR-0167 Software Quality Assurance Program and Guidelines requirements the SAPHIRE 8 Software Verification and Validation Plan – Volume I sections 2 and 3 failed to satisfy and minor corrections for the Software Verification and Validation Plan – Volume I sections 2 Software Requirements and 3 Interface Requirements Specification.

The Software Verification and Validation Plan – Volume I, section 4 Design Specification, Document ID: INL/EXT-05-00821 for SAPHIRE 8. Of the 15 criteria listed for the required information to be provided within section 4 Design Specification 4 failed. Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Design and Interface Design Revision 1 Document ID: INL/EXT-09-17069 for the specific parts of the NUREG/BR-0167 Software Quality Assurance Program and Guidelines requirements the SAPHIRE 8 Software Verification and Validation Plan – Volume I section 4 Design Specification failed to satisfy and minor corrections for the Software Verification and Validation Plan – Volume I section 4 Design Specification.

The Software Verification and Validation Plan – Volume II, Document ID: INL/EXT-05-00821 for SAPHIRE 8. Of the criteria listed for the required information to be provided within the Software Verification and Validation Plan – Volume II all criteria were satisfied. Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Design and Interface Design Revision 1 Document ID: INL/EXT-09-17069 for minor corrections for the Software Verification and Validation Plan – Volume II.

The Requirements Traceability Matrix for SAPHIRE 8. Of the criteria listed for the required information to be provided within the Requirements Traceability Matrix most failed. Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Requirements Revision 1 Document ID: INL/EXT-09-16789 and the Independent Verification and Validation Of SAPHIRE 8 Software Design and Interface Design Revision 1 Document ID: INL/EXT-09-17069 for the specific parts of the NUREG/BR-0167 Software Quality Assurance Program and Guidelines requirements the SAPHIRE 8 Requirements Traceability Matrix failed to satisfy and minor corrections for the Requirements Traceability Matrix.

The Data Dictionary, file “saphire-data-dictionary.html” for SAPHIRE 8. The criteria listed for the required information to be provided was evaluated with the Software Verification and Validation Plan – Volume I, section 4 Design Specification, Document ID: INL/EXT-05-00821 for SAPHIRE 8. IV&V passed this criterion based on “*the Data Dictionary has been developed*”. It is the recommended by IV&V that the Data Dictionary also contain items computed in the code, what they are and what they do. Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Design and Interface Design Revision 1 Document ID: INL/EXT-09-17069.

The System Test Plan Document ID: INL/EXT-09-16455 for SAPHIRE 8. Of the three criteria listed for the required information to be provided within the SAPHIRE 8 System Test Plan all criteria were satisfied.

The Software Acceptance Test Plan Document ID: INL/EXT-09-16236 for SAPHIRE 8. Of the seventeen criteria listed for the required information to be provided within the SAPHIRE 8 Software Acceptance Test Plan all criteria were satisfied. Minor corrections for the SAPHIRE 8 Software Acceptance Test Plan are provided in the Independent Verification and Validation Of SAPHIRE 8 Software Acceptance Test Plan Revision 0 Document ID: INL/EXT-10-18081.

The Volume 3 Users’ Guide for SAPHIRE 8. Of the five criteria listed for the required information to be provided within the Volume 3 Users’ Guide for SAPHIRE 8 three failed. Refer to the Independent Verification and Validation Of SAPHIRE 8 Volume 3 Users’ Guide Revision 0 Document ID: INL/EXT-10-18028 for the specific parts of the NUREG/BR-0167 Software Quality Assurance Program and Guidelines requirements the Volume 3 Users’ Guide for SAPHIRE 8 failed to satisfy and minor corrections for the Volume 3 Users’ Guide for SAPHIRE 8.

The Software Verification and Validation Plan – Volume II Appendix C Coding Standards, Document ID: INL/EXT-05-00821 for SAPHIRE 8. Suggestions for the checklist used for the code walkthroughs and the coding standard are currently being implemented.

7.0 Summary of Best Practices

- The SAPHIRE team is improving the software development process by conducting Independent Verification and Validation activities.
- The SAPHIRE Independent Verification and Validation activities are being conducted by a team that is both technically and managerially separate from the organization responsible for developing the product.
- The SAPHIRE product is implementing and following the requirements for Level 1 software defined in Section 1.2 of NUREG/BR-0167 Software Quality Assurance Program and Guidelines.
- The NRC will perform an audit of the software Quality Assurance implementation once a year against the requirements of NUREG/BR-0167 Software Quality Assurance Program and Guidelines.
- SAPHIRE configuration management for version control, source code and documentation uses the Revision Control System (RCS).
- The organization, tasks, roles and responsibilities within the SAPHIRE team are defined.
- Peer reviews and Code Walkthroughs are being implemented.
- SAPHIRE has a defined quality assessment and improvement approach.

8.0 Summary of Lessons Learned

- Ensure that all software requirements are documented.
- Ensure that all software requirements are uniquely defined as functional, performance, design constraints, attributes and external interface.
- Ensure that all software requirements are testable. If a software requirement is not testable, then it is not a software requirement.
- Conduct the Software Requirements Review at the end of the requirements definition to assure the intent, completeness, verifiability, consistency and technical feasibility of the requirements.
- Ensure that all software design components are documented.
- Ensure that all software design components are uniquely defined.
- Conduct the Preliminary Design Review when the preliminary design has been designed.
- Conduct the Critical Design Review when the design is complete.
- Ensure that the Requirements Traceability Matrix shows all software requirements are mapped to design components and test cases.
- Conduct formal peer inspections in order to find errors.
- Ensure that documentation is maintained.

- Volume 3 Users' Guide for SAPHIRE Version 8 - DRAFT

Attachment 3: List of Software Test Tools and Tool Descriptions

- *CodeHealer for Delphi* © Version 2.5.0 – CodeHealer is an efficient, powerful and easy to use program source code analysis and verification tool that will help find and fix a significant number of programming bugs, mistakes and inconsistencies in programs before they are released. The information provided by CodeHealer will also help developers understand and improve existing code that they have not written.
- *Coverage Validator* © Version 4.10 – Coverage Validator automatically detects which lines of your program have been executed, provides visit counts for each line and calculates visit percentages for files that are visited. Coverage Validator can also be used for unit testing and as part of a regression testing strategy used by Quality Assurance teams.
- *Memory Validator* © Version 4.86 – Memory Validator detects memory leaks, handle leaks, memory corruptions, uninitialized memory, buffer over runs and buffer under runs. Memory Validator can also be used to detect performance problems related to memory and resource allocation and deallocation, and performance problems related to fragmented memory heaps.
- *Performance Validator* © Version 2.63 – Performance Validator automatically calculated performance data for your application as it executes. Performance Validator can also be used for unit testing and as part of a regression testing strategy used by Quality Assurance teams.
- *Thread Validator* Version 1.52 – Thread Validator detects deadlocks, potential deadlocks, bad lock strategies, and performs deadlock postmortem analysis.

Attachment 4: Detailed Findings and Recommendations Tables

Table 4-1 Software Project Plan

Software Project Plan			
Criteria	Source	Findings	Recommendations
Has the developer created a software Project Plan?	NUREG/BR-0167 Section 4.2 and 5.2.4	<p>Revision 0 IV&V Review The project plan has been developed and assigned Document ID: INL/EXT-09-15853.</p> <p>Revision 1 IV&V Review The Software Project Plan has been developed and details how the developer will manage the SAPHIRE 8 software project. The Software Project Plan is assigned Document ID: INL/EXT-09-15853. The Software Project Plan includes the table of contents suggested by NUREG/BR-0167. Once all approvals have been made, then an effective date can be assigned with a date AFTER the last signature date on the signature page.</p> <p>Revision 2 IV&V Review Criteria satisfied.</p>	<p>Revision 0 IV&V Review An effective date should not be assigned until approval from the Project Sponsor, Project Manager, and Department Manager has been obtained. Please modify the plan to have an effective date of TBD. Once all approvals have been made, then an effective date can be assigned with a date AFTER the last signature date on the signature page.</p> <p>Revision 1 IV&V Review None.</p> <p>Revision 2 IV&V Review None.</p>
Does the Project Plan provide project background and objectives?	NUREG/BR-0167 Section 5.2.4	<p>Revision 0 IV&V Review The plan provides an excellent background and includes objectives for the forthcoming version (SAPHIRE 8). IV&V recognizes that development began prior to the issue of the project plan and therefore, accepts activities that have already been completed although this is a plan for what will be done.</p> <p>Revision 1 IV&V Review Section 1.1 of the Software Project Plan provides the Project Background and Objectives for SAPHIRE 8. The plan provides an excellent background and includes objectives for the forthcoming version (SAPHIRE 8). IV&V recognizes that development began prior to the issue of the project plan and therefore, accepts</p>	<p>Revision 0 IV&V Review None.</p> <p>Revision 1 IV&V Review Minor EDITORIAL comments: Paragraph 1 uses the acronym “INL” for the first time. IV&V suggests providing the definition in front of the acronym and then enclosing the acronym in parentheses (INL). Paragraph 5 uses the acronym “SPAR” for the first time. IV&V suggests providing the definition in front of the acronym and then enclosing the acronym in parentheses (SPAR).</p>

Software Project Plan			
Criteria	Source	Findings	Recommendations
Does the Project Plan address plan scope and organization?	NUREG/BR-0167 Section 5.2.4	activities that have already been completed although this is a plan for what will be done.	Revision 2 IV&V Review Criteria satisfied. Revision 0 IV&V Review Section 1.2 of the Project Plan provides the Project Scope and Organization for SAPHIRE 8. The author of this section should be commended on the extent of the process for the review implemented regarding DOE O 414.1C, 10 CFR 830 Subpart A, 10 CFR 835, the DEAR Integrated Safety Management System (DEAR clause), NQA-1, and the process used to determine the INL Software Quality Level/Analysis.
			Revision 1 IV&V Review Section 1.2 of the Software Project Plan provides the Project Scope and Organization for SAPHIRE 8. The author of this section should be commended on the extent of the process for the review implemented regarding DOE O 414.1C, 10 CFR 830 Subpart A, 10 CFR 835, the DEAR Integrated Safety Management System (DEAR clause), NQA-1, and the process used to determine the INL Software Quality Level/Analysis.
			Revision 2 IV&V Review Criteria satisfied. Revision 0 IV&V Review The Plan Maintenance is identified in section 1.3 of the plan. This section states that the plan is updated as required by the NRC Project Management. Section 5.2.4 states that consideration should require the developer to modify the plan and submitted with the monthly progress reports.
Does the Project Plan address plan maintenance (i.e., Project Plan updates)?	NUREG/BR-0167 Section 5.2.4		Revision 1 IV&V Review Section 1.3 of the Software Project Plan provides the Plan Maintenance for SAPHIRE 8. This section states " <i>The SPP will be updated as needed as required by the NRC Project Management</i> ". Section 5.2.4 The Software Project Plan of NUREG/BR-0167 paragraph 2 states " <i>Because the</i>
			Revision 0 IV&V Review However, IV&V has a couple of questions. Discussion regarding the effective date of the INL SQA Program. The plan states "When the revised INL SQA Program becomes effective (3/29/2007)." The wording is confusing. Should it be became effective? Minor EDITORIAL comment: The last sentence of section 1.2 states that the NRC will perform an audit of the software QA implementation "one year". I believe this should be "once a year". Revision 1 IV&V Review Minor EDITORIAL comments: Paragraph 6 refers to "10 CFR 830 Subpart A, Nuclear Safety Management", 10 CFR 830 Subpart A is "Quality Assurance Requirements". Paragraph 8 starts "Per LWP-13610". I believe this should be "PDD-13610". Paragraph 19 uses the acronym "RES" for the first time. IV&V suggests providing the definition in front of the acronym and then enclosing the acronym in parentheses (RES). Revision 2 IV&V Review None. Revision 0 IV&V Review IV&V's concern is that the NRC Project Management will not be aware of modifications that the INL has found that reflect a need for a change to the plan unless the NRC Project Management obtains an updated copy with the monthly status reports. Please consider adding (or replacing) a statement that indicates that updates will be provided to the NRC Project Management for approval in the monthly status reports, as needed. Revision 1 IV&V Review IV&V's concern is that the NRC Project Management will not be aware of modifications that the INL has found that reflect a need for a change to the plan unless the NRC Project Management obtains an updated copy with the monthly status reports. Please consider adding (or replacing) a statement that indicates that updates will be

Software Project Plan			
Criteria	Source	Findings	Recommendations
Has the Project Plan been approved by the NRC sponsor?	NUREG/BR-0167 Section 5.2.4	<i>plan should be kept up to date, consider requiring the developer to submit any changes to the plan with the monthly progress reports.</i>	provided to the NRC Project Management for approval in the monthly status reports, as needed. Revision 2 IV&V Review Criteria satisfied.
		Revision 0 IV&V Review The Project Plan states, “The signed NRC Form 173 authorizes the transfer of funds from the NRC to DOE-ID and serves as the official authorization to commence work...”. This approves the funding authorization, not the approval of the Project Plan.	Revision 2 IV&V Review None. Revision 0 IV&V Review It is recommended that a signature page containing the sponsor approval signature as well as the INL project manager and INL Department Manager be included in the document. This is required by the INL PEP format.
		Revision 1 IV&V Review The Software Project Plan Section 2.1 Planning Approach last paragraph states, “ <i>The signed NRC Form 173 authorizes the transfer of funds from the NRC to DOE-ID and serves as the official authorization to commence work...</i> ”. This approves the funding authorization, not the approval of the Project Plan. The Software Project Plan as of this review has not been approved by the NRC sponsor.	Revision 1 IV&V Review None. Revision 2 IV&V Review The Software Project Plan has been approved by the NRC sponsor. Signature date of 2/25/10. Criteria satisfied.
Does the Project Plan describe the approach used to plan the project?	NUREG/BR-0167 Section 5.2.4.1	Revision 0 IV&V Review Section 2.1 of the Project Plan provides the information required by Section 5.2.4.1 of the NUREG.	Revision 0 IV&V Review None. Revision 1 IV&V Review Section 2.1 Planning Approach of the Software Project Plan provides the information required by Section 5.2.4.1 of the NUREG.
			Revision 1 IV&V Review Minor EDITORIAL comments: Section 2.1 Planning Approach first paragraph uses the acronym “OCOI” for the first time. IV&V suggests providing the definition in front of the acronym and then enclosing the acronym in parentheses (OCOI). Section 2.1 Planning Approach, and various other sections, uses the acronyms “PCFS” and “PFCS”. IV&V suggests clarification on the acronym and providing the definition in front of the first occurrence of the acronym and then enclosing the acronym in parentheses. Revision 2 IV&V Review None. Revision 2 IV&V Review Criteria satisfied.

Software Project Plan			
Criteria	Source	Findings	Recommendations
Does the Project Plan describe the approach used to track technical progress?	NUREG/BR-0167 Section 5.2.4.2	Revision 0 IV&V Review Sections 2.1, 2.2, and 2.3 of the Project Plan provide the information required by Section 5.2.4.2 of the NUREG.	Revision 0 IV&V Review None.
		Revision 1 IV&V Review Sections 1.2 Project Scope and Organization, 1.5 Security, 2.1 Planning Approach, 2.2 Risk Management, 2.3 Tracking and Oversight Approach, 2.5 Scheduling, 3.1 Implementing the Life cycle Tasks of the Statement of Work and 3.6 Use of Project Metrics of the Software Project Plan provide the information required by Section 5.2.4.2 of the NUREG.	Revision 1 IV&V Review Minor EDITORIAL comments: Section 2.2 Risk Management uses the acronym RCS for the first time. IV&V suggests providing the definition in front of the acronym and then enclosing the acronym in parentheses (RCS).
		Revision 2 IV&V Review Criteria satisfied.	Revision 2 IV&V Review None.
Does the Project Plan describe the approach used to track conformance to the planned schedule?	NUREG/BR-0167 Section 5.2.4.2	Revision 0 IV&V Review Sections 2.1, 2.2, and 2.3 of the Project Plan provide the information required by Section 5.2.4.2 of the NUREG.	Revision 0 IV&V Review None.
		Revision 1 IV&V Review Sections 1.4 Schedule, 2.1 Planning Approach, 2.3 Tracking and Oversight Approach and 2.5 Scheduling of the Software Project Plan provides the information required by Section 5.2.4.2 of the NUREG.	Revision 1 IV&V Review None.
		Revision 2 IV&V Review Criteria satisfied.	Revision 2 IV&V Review None.
Does the Project Plan describe the approach used to track costs as related to actual work performed?	NUREG/BR-0167 Section 5.2.4.2	Revision 0 IV&V Review Sections 2.1, 2.2, and 2.3 of the Project Plan provide the information required by Section 5.2.4.2 of the NUREG.	Revision 0 IV&V Review None.
		Revision 1 IV&V Review Sections 2.1 Planning Approach, 2.3 Tracking and Oversight Approach, 2.6 Resources and 3.6 Use of Project Metrics of the Software Project Plan provides the information required by Section 5.2.4.2 of the NUREG.	Revision 1 IV&V Review None.
		Revision 2 IV&V Review Criteria satisfied.	Revision 2 IV&V Review None.
Does the Project Plan describe the approach used to track metrics?	NUREG/BR-0167 Section 5.2.4.2	Revision 0 IV&V Review The plan discusses metrics in only one location – a section regarding the Integrity Level on page 36.	Revision 0 IV&V Review IV&V believes that metrics are not only performed routinely, and metrics can be established per the

Software Project Plan			
Criteria	Source	Findings	Recommendations
		<p>It states, “Furthermore, no metrics to support an IEEE-1012 classification higher than a “1” currently exist.” The NUREG requires that metrics be part of the Tracking and Oversight function in Section 5.2.4.</p>	<p>requirements of the NUREG. For example, Earned Value can be used as a “routine” metric to track cost and schedule variances. Another metric can be used to obtain a percentage of anomalies (errors) discovered by developers as opposed to those errors discovered by IV&V. A recent example of the “error tracking” metric is the errors discovered by IV&V while evaluating the Significance Determination Process (SDP). However, to enable this metric, the development team must track coding errors (for example) that can be used for comparisons. McCabe’s complexity measure is another useful metric that can be applied to modules (objects) within the code. This metric should not exceed a value of 10 but IV&V has identified several modules with complexity measures greater than 50. High complexity measures indicate the potential difficulty to perform code maintenance and hence, difficult to understand without comments in the code. As such, IV&V does not believe the code is “self documenting” as stated by the development team. Therefore, an additional metric would be (and should be) the number of comments per 100 lines of code, for example.</p>
			<p>Revision 1 IV&V Review Section 3.6 Use of Project Metrics of the Software Project Plan provides the information required by Section 5.2.4.2 of the NUREG.</p> <p>Revision 2 IV&V Review Criteria satisfied.</p>
Does the Project Plan describe the approach used to track security?	NUREG/BR-0167 Section 5.2.4.2	<p>IV&V could find one instance in which security was addressed – in the table for IEEE definitions of consequences.</p>	<p>Revision 0 IV&V Review If security has been determined to as not applicable for this software, please provide a statement in the document as well as a defensible reason why security should not be discussed.</p> <p>Revision 1 IV&V Review Section 1.5 Security of the Software Project Plan provides the information required by Section 5.2.4.2 of the NUREG.</p> <p>Revision 2 IV&V Review Criteria satisfied.</p>
Does the Project Plan describe the approach to track risk?	NUREG/BR-0167 Section 5.2.4.2	<p>IV&V is aware that a Risk Assessment for the software (INL’s PREPS requirement) was performed but no evidence could be found</p>	<p>Revision 0 IV&V Review No evidence could be found regarding this requirement in the Project Plan.</p> <p>Revision 1 IV&V Review None.</p> <p>Revision 2 IV&V Review None.</p>

Software Project Plan			
Criteria	Source	Findings	Recommendations
Does the Project Plan address the organization, tasks, and responsibilities (i.e., Show how the tasks in the SOW are assigned to responsible elements of the project organization?)	NUREG/BR-0167 Section 5.2.4.3	<p>regarding this requirement could be found in the Project Plan.</p> <p>Revision 1 IV&V Review Section 2.2 Risk Management of the Software Project Plan provides the information required by Section 5.2.4.2 of the NUREG.</p> <p>Revision 2 IV&V Review Criteria satisfied.</p>	<p>Revision 1 IV&V Review None.</p> <p>Revision 2 IV&V Review None.</p>
Does the Project Plan provide the initial, top-level project schedule and the rationale for arriving at this schedule?	NUREG/BR-0167 Section 5.2.4.3	<p>Revision 0 IV&V Review Section 2.3 of the plan provides a discussion of the Organization, Tasks, and Responsibilities. There is a discussion indicating that the PI “makes all technical and administrative work assignments”. It is assumed that the PI makes these assignments based upon the requirements in the SOW and Requirements Specification. Therefore, IV&V will Pass this requirement at this time.</p> <p>Revision 1 IV&V Review Section 2.4 Organization, Tasks, and Responsibilities of the Software Project Plan provides a discussion of the Organization, Tasks, and Responsibilities. There is a discussion indicating that the PI “makes all technical and administrative work assignments”. It is assumed that the PI makes these assignments based upon the requirements in the SOW and Requirements Specification. Therefore, IV&V will Pass this requirement at this time.</p>	<p>Revision 0 IV&V Review Code walkthroughs and Peer Reviews would assist in making this determination apparent but IV&V has not identified evidence that these requirements/reviews have been performed (they are not under Configuration Control). IV&V has been directed to attend these reviews but it does not appear that these reviews are being performed.</p> <p>Revision 1 IV&V Review Code walkthroughs and Peer Reviews would assist in making this determination apparent but IV&V has not identified evidence that these requirements/reviews have been performed (they are not under Configuration Control). IV&V has been directed to attend these reviews but it does not appear that these reviews are being performed.</p>
Does the Project Plan	NUREG/BR-0167 Section 5.2.4.4	<p>Revision 0 IV&V Review A high level schedule is provided in Section 2.4 of the plan. It provides the schedule for the Beta release dates and final version release date.</p> <p>Revision 1 IV&V Review A high level schedule is provided in Section 2.5 Scheduling of the Software Project Plan. It provides the schedule for the Beta release dates and final version release date.</p> <p>Revision 2 IV&V Review Criteria satisfied.</p>	<p>Revision 0 IV&V Review None.</p> <p>Revision 1 IV&V Review None.</p> <p>Revision 2 IV&V Review None.</p>
Does the Project Plan	NUREG/BR-0167	Revision 0 IV&V Review	Revision 0 IV&V Review

Software Project Plan			
Criteria	Source	Findings	Recommendations
Identify project resources including staffing, software engineering environment, and support tools?	Section 5.2.4.5	Section 2.5 of the plan provides an excellent breakout of the various project resources, including processes for status reporting of funding, Estimate at Completion, responsibilities of higher level management, software engineering requirements for staff and PIs, overall staffing levels and team resumes. It also includes the process for obtaining subcontractors, if needed.	Revision 1 IV&V Review Section 2.6 Resources of the Software Project Plan provides an excellent breakout of the various project resources; including processes for status reporting of funding, Estimate at Completion, responsibilities of higher level management, software engineering requirements for staff and PIs, overall staffing levels and team resumes. It also includes the process for obtaining subcontractors, if needed.
			Revision 2 IV&V Review None.
			Revision 0 IV&V Review IV&V must be involved with the SQA reviews of configuration management and control processes. (Due to the loss of two personnel, IV&V may need to assume some of the SQA responsibilities). As of this review of this plan, a Configuration Control Plan has not been reviewed by IV&V and therefore, cannot be approved. Finally, since development has started and beta release(s) have been issued, IV&V should have reviewed (and the plan stating that IV&V will review) testing, documentation, etc. prior to release and baseline. There is no mention in the plan regarding a change control board and as such, the role (charter) of a change control board. Version control is not sufficient as a substitute for a change control board.
			Revision 2 IV&V Review Refer to the SAPHIRE 8 Software Independent Verification and Validation Plan Document ID: INL/EXT-09-15649 for the substitution of Peer Review in place of Configuration Control Board (CCB).
			Revision 1 IV&V Review Minor EDITORIAL comment: Paragraph 8, the sentence “Prior to check-in, programmers must explain...” IV&V suggest changing “explain” to “document” to be consistent
			Revision 1 IV&V Review Section 2.7 Configuration Management of the Software Project Plan provides the information required by Section 5.2.4.6 of the NUREG.
			Page 32

Software Project Plan			
Criteria	Source	Findings	Recommendations
specifically, project baselines, change control, baseline status, proposed changes, implemented changes, software development library, and documentation and code?	Configuration Management and Change Control processes are described in detail in Section 2.7 of the plan.	Criteria satisfied.	with the sentence in paragraph 5 “Prior to check-in, programmers must document...”.
Has the Change Control Process/Procedure been identified?			Revision 2 IV&V Review None.
Does the Project Plan describe how each major life-cycle task of the SOW work will be implemented?	NUREG/BR-0167 Section 5.2.4	Revision 0 IV&V Review The SAPHIRE team has developed an internal Work Development Plan and is provided in Appendix A of the Project Plan. The Work Development provides an excellent description of the tasks and subtask breakdown, and an estimated level-of-effort. Section 3.1 of the plan states, “an extensive discussion of the Software Requirements[s] have been specified in the ... SVVP document” which was developed by SQA prior to IV&V involvement. IV&V is reviewing the Form 189s, SOW, and SVVP to evaluate the RTM. The RTM has failed to map requirements to design components to test cases, etc. It has major problems. A separate IV&V report will be issued that includes the evaluation of the RTM issues. Section 3.2 of the project plan also discusses the SVVP and how it will ensure that ALL requirements are implemented and that it is a consolidated document used for tracking software development, testing, and implementation. The Project Plan does a good job in identifying how the SVVP should be used, however.	Revision 0 IV&V Review A separate IV&V report will be issued that includes the evaluation of the RTM issues.
			Revision 1 IV&V Review None.
			Revision 1 IV&V Review Sections 3.1 Implementing the Life Cycle Tasks of the Statement of Work, 3.2 Verification and Validation Approach and Appendix A SAPPHIRE 8 Work Development Plan provides the information required by Section 5.2.4 of the NUREG. Section 3.1 of the plan states, “an extensive discussion of the Software Requirement[s] have been specified in the ... SVVP document” which was developed

Software Project Plan			
Criteria	Source	Findings	Recommendations
		<p>by SQA prior to IV&V involvement. Section 3.2 of the project plan also discusses the SVVP and how it will ensure that ALL requirements are implemented and that it is a consolidated document used for tracking software development, testing, and implementation. The Project Plan does a good job in identifying how the SVVP should be used. The SAPHIRE team has developed an internal Work Development Plan and is provided in Appendix A of the Project Plan. The Work Development provides an excellent description of the tasks and subtask breakdown, and an estimated level-of-effort.</p>	<p>Revision 2 IV&V Review Criteria satisfied. None.</p>
Does the Project Plan describe the nonconformance reporting and corrective action process, including nonconformance detection and reporting, impact assessment and corrective action and tracking, and tracking and management reports?	NUREG/BR-0167 Section 5.2.4	<p>Revision 0 IV&V Review Nonconformance Reporting and Corrective Action is identified in Section 3.3 of the Project Plan. Details are defined in the second paragraph.</p>	<p>Revision 0 IV&V Review IV&V's only concern is the issue regarding what will be done vs. what has been done. For example, the first sentence of the second paragraph states "...corrective actions should be reported to the NRC". Instead of should be, it should state will be. Please review this paragraph to correct this "editorial" issue.</p>
Does the Project Plan identify all deliverables and the dates they are due?	NUREG/BR-0167 Section 5.2.4	<p>Revision 1 IV&V Review Section 3.3 Nonconformance Reporting and Corrective Action of the Software Project Plan provide the information required by Section 5.2.4 of the NUREG.</p>	<p>Revision 1 IV&V Review Criteria satisfied. None.</p>
		<p>Revision 0 IV&V Review The NUREG states "Provide the initial, top-level project schedule and the rationale for arriving at this schedule". Per section 1.4 of the plan, it is stated that each JCN has its own start and end dates on Form 189 and Form 173. No rationale is provided but it is assumed that the rationale is contained in these NRC forms. However, Appendix A, the SAPHIRE 8 Work Development Plan dated almost 2 years ago has 6 subtasks that are described as well as a schedule, level of effort, etc. that has preliminary dates for beta releases. As this is a plan, there is no issue with these dates</p>	<p>Revision 2 IV&V Review None.</p>

Software Project Plan				
Criteria	Source	Findings	Recommendations	
		as they are expected to change as work progresses and updates to the Project Plan are made.	Revision 1 IV&V Review The NUREG states “Provide the initial, top-level project schedule and the rationale for arriving at this schedule”. Per section 1.4 Schedule of the plan, it is stated that each JCN has its own start and end dates on Form 189 and Form 173. No rationale is provided but it is assumed that the rationale is contained in these NRC forms. However, Appendix A, the SAPHIRE 8 Work Development Plan dated almost 2 years ago has 6 subtasks that are described as well as a schedule, level of effort, etc. that has preliminary dates for beta releases. As this is a plan, there is no issue with these dates as they are expected to change as work progresses and updates to the Project Plan are made.	Revision 1 IV&V Review None.
			Revision 2 IV&V Review Criteria satisfied.	
Does the Project Plan address standards, procedures, conventions and metrics to be used? This includes product standards, such as documentation standards and coding standards and process standards, including inspection and review procedures.	NUREG/BR-0167 Section 5.2.4 – Software Best Practices	Revision 0 IV&V Review Metrics are required by the NUREG and examples of value-added metrics that could (and should) be performed were provided in one of the criteria provided above. However, the development group has provided a link to the CodeGear Object Pascal Style Guide. The only reference IV&V could find in the plan was reviews performed by external (non-INL) entities, i.e., NRC. This is unacceptable.	Revision 0 IV&V Review Information regarding the elements of the style guide that will be used should be in the Project Plan to comply with the NUREG. Inspections and review procedures by the developers with the development team and IV&V in attendance must include code walkthroughs and peer reviews.	
			Revision 1 IV&V Review Section 1.2 Project Scope and Organization references: NRC Directive 11.7 NRC Procedures for Placement and Monitoring of Work with the Department of Energy. NRC Directive 11.7 establishes a controlled and monitored process for requesting services of a national lab, work planning, work authorization and initiation, work progress monitoring, reporting, work termination and project closeout; DOE Order 414.1C Quality Assurance, 10 CFR 830 Subpart A Quality Assurance Requirements, ASME NQA-1-200 Quality Assurance Requirements for Nuclear

Criteria	Source	Findings	Recommendations
		<p>NUREG-0650, Revision 2, Preparing NUREG Series Publications.</p> <p>Section 3.2 Verification and Validation Approach specifies the SAPHIRE product development team uses the SVVP to track, verify and validate requirements to ensure that all requirements are implemented and that all requirements are included in the automated test scripts and test results.</p> <p>Section 3.3 Nonconformance Reporting and Corrective Action specifies project-level nonconformance and associated corrective actions will be reported to the NRC via the MLSR.</p> <p>Section 3.4 Peer Reviews and Code Walkthroughs specifies the team will perform and document, as appropriate, periodic peer reviews and code walkthroughs, including reviews of preliminary and critical designs proposals. This section also specifies the guidance for external peer reviews is found in the NRC's office instruction, PRM-10, Revision 0, Peer Review of RES Projects, dated March 19, 2007.</p> <p>Section 3.5 Quality Assessment (QA) and Improvement Approach specifies each JCN will have a quality level determination made by a Quality Level Analyst in accordance with LWP-13014 and documented on INL Form 414.A89.</p> <p>Section 3.7 Deliverables specifies software releases are managed via the SAPHIRE Release Management process. Section 3.7 also specifies project closure will be accomplished in accordance with NRC Directive 11.7.</p>	<p>Revision 2 IV&V Review None.</p> <p>Revision 0 IV&V Review Details pertaining to the compliance requirements are provided in evaluation criteria provided below.</p> <p>Revision 1 IV&V Review None.</p> <p>Revision 2 IV&V Review None.</p>
Does the Software Project Plan provide information on tracking and oversight?	NUREG/BR-0167 Figure 5-1 and Section 5.3	<p>Revision 0 IV&V Review Tracking and Oversight is discussed in Section 2.2 of the Plan.</p> <p>Revision 1 IV&V Review Section 2.3 Tracking and Oversight Approach of the Software Project Plan provide the information required by NUREG.</p> <p>Revision 2 IV&V Review Criteria satisfied.</p>	<p>Revision 2 IV&V Review None.</p>

Software Project Plan			
Criteria	Source	Findings	Recommendations
Does the schedule include milestones for life-cycle reviews, such as requirements reviews, preliminary design reviews, and critical design reviews for IV&V review?	NUREG/BR-0167 Section 3.	<p>Revision 0 IV&V Review Life cycle reviews, PDRs, CDRs, and Test Readiness Reviews are required by the NUREG. Internal INL procedures (LWP-13620) referenced for QL-3 software do not require these types of reviews. It is IV&V's understanding that a NUREG "rule" supersedes any procedure "Order".</p>	<p>Revision 0 IV&V Review IV&V agrees that if requirements and processes not specifically addressed by the NRC, NUREG procedures should follow the INL processes to ensure product quality and address those items that do not provide direction when they are not found in the NUREG. NUREG/BR-0167 addresses the need for these reviews and therefore must be performed internally. Also, due to the complexity of the migration of the code, these reviews are essential to the quality of the software. It is also IV&V's understanding that reviews are required by the NRC. IV&V also has a commitment to ensure that the quality is built-in to the software and not tested-in as being done primarily by the Beta Testing efforts. IV&V cannot provide assistance and recommendations if these reviews are not performed.</p>
		<p>Revision 1 IV&V Review Section 3.4 Peer Reviews and Code Walkthroughs states "As part of the SAPPHIRE 8 development, the team will perform and document, as appropriate, periodic peer reviews and code walkthroughs, including reviews of preliminary and critical designs proposals.", and "Peer reviews and code walkthroughs will be reviewed independently when possible by IV&V members.</p>	<p>Revision 1 IV&V Review The guidance for external peer reviews is found in the NRC's office instruction, PRM-10, Revision 0, Peer Review of RES Projects, dated March 19, 2007." Appendix A, Quality Assurance Recommendations of the Software Project Plan b) discuss products associated with each formal review, c) V&V activities to be performed by a functionally independent V&V person and the time frame for performing independent V&V activities. Table 3-2 of NUREG/BR-0167 summarizes the formal major life cycle reviews and audits by major life-cycle activities. IV&V could not determine if milestones for life-cycle reviews exist in the schedules contained within the Software Project Plan.</p>
		<p>Revision 2 IV&V Review Section 3.4 Peer Reviews and Code Walkthroughs states "As part of the SAPPHIRE 8 development, the team will perform and document, as appropriate, periodic peer reviews and code walkthroughs, including reviews of preliminary and critical designs proposals.", and "Peer reviews and code walkthroughs will be reviewed independently when possible by IV&V members. The guidance for external peer reviews is found in the NRC's office instruction, PRM-10, Revision 0, Peer Review of RES Projects, dated March 19, 2007." Appendix A, Quality Assurance Recommendations of the Software Project Plan b)</p>	<p>Revision 2 IV&V Review None.</p>

Software Project Plan			
Criteria	Source	Findings	Recommendations
Does the Software Project Plan map the tasks in the SOW to elements in the WBS? Has the WBS been developed and under CM control?	NUREG/BR-0167 Section 1.4, Section 5.2, Software Best Practices	<p>discuss products associated with each formal review, c) V&V activities to be performed by a functionally independent V&V person and the time frame for performing independent V&V activities. Table 3-2 of NUREG/BR-0167 summarizes the formal major life cycle reviews and audits by major life-cycle activities. Section 3.4 Peer Reviews and Code Walkthroughs Table 1 Summary of Major Life Cycle Reviews and Audits provides schedule milestones.</p> <p>Criteria satisfied.</p>	<p>Revision 0 IV&V Review A report regarding the RTM is under development.</p>
		<p>Revision 0 IV&V Review This requirement can be addressed by evaluating the RTM as the RTM must identify each requirement, design component, and test case(s) to ensure the requirements meet the design and that all requirements identified in the NRC documents (SOW) are adequately, completely, and correctly implemented. The results must also be repeatable and defensible. IV&V is evaluating the RTM identified in the SVVP and mapping the RTM to the NRC requirements, etc. The results of the RTM evaluation (to date) are failing miserably. In fact, IV&V is essentially developing the RTM for the development team which puts into question the IV&V's role of independence – the developers should have generated the RTM and IV&V evaluate it. But for IV&V to evaluate the RTM and provide results, IV&V has had to generate the RTM.</p>	<p>Revision 1 IV&V Review None.</p>
		<p>Revision 1 IV&V Review Section 2.1 Planning Approach addresses the Statement of Work (SOW) which “provides all the pertinent information required for the PI to prepare an NRC Form 189 proposal: Project Title, JCN, Budget and Reporting number, NRC issuing office, NRC Project Manager’s name and contact information, NRC Technical Monitor’s name and contact information, project background, project objectives, scope of work, deliverables and schedules, period of performance, reporting requirements, and so on.”</p> <p>Section 2.5 Scheduling addresses the Work</p>	<p>Revision 1 IV&V Review Page 40</p>

Software Project Plan			
Criteria	Source	Findings	Recommendations
Does the Software Project Plan provide a project schedule, such as a GANTT chart, and rationale for tasks identified in the project schedule?	NUREG/BR-0167 Figure 5-1	<p>Breakdown Structure (WBS) which provides the budgetary control for the schedule. Supporting the WBS is a budget Basis of Estimate document that reflects the level of effort specified in the NRC Form 189 for the project.</p> <p>Appendix A Work Development plan in the Software Project Plan contains the Detailed Task/SubTask Breakdown. This includes information related to technical activities for the tasks and subtasks to finish the beta and general-released version of SAPHIRE 8.</p>	Revision 2 IV&V Review Criteria satisfied. Revision 0 IV&V Review None.
Does the Software Project Plan identify resources needed (equipment, personnel, tools)?	NUREG/BR-0167 Section 5.2.4	<p>The Work Development Plan contains a high level schedule.</p> <p>Revision 1 IV&V Review Appendix A SAPHIRE 8 Work Development Plan contains a high level schedule.</p> <p>Revision 2 IV&V Review Criteria satisfied.</p>	Revision 1 IV&V Review None. Revision 2 IV&V Review None.
Does the Software Project Plan discuss resources in Section 2.5. It provides information on funding, management direction, staffing levels and staff requirements needed to be part of the development team, and developer requirements/qualifications. Section 3.5 discusses project closeout and the identification (and return) of remaining fund and NRC owned equipment?		<p>The Project Plan discusses resources in Section 2.5. It provides information on funding, management direction, staffing levels and staff requirements needed to be part of the development team, and developer requirements/qualifications. Section 3.5 discusses project closeout and the identification (and return) of remaining fund and NRC owned equipment.</p>	Revision 0 IV&V Review None. Revision 1 IV&V Review Section 2.6 Resources provides information on funding, management direction, staffing levels and staff requirements needed to be part of the development team, and developer requirements/qualifications. Section 3.7 Deliverables discusses project closeout and the identification (and return) of remaining fund and NRC owned equipment.
Does the Software	None specified.	<p>Revision 2 IV&V Review Criteria satisfied.</p> <p>Revision 0 IV&V Review</p>	Revision 2 IV&V Review None. Revision 0 IV&V Review

Software Project Plan			
Criteria	Source	Findings	Recommendations
Project Plan map to the SVVP approach?		N/A (NOTE: IV&V will only examine test cases and observe developer testing per NRC sponsor direction)	None.
		Revision 1 IV&V Review This criteria not included in this review.	Revision 1 IV&V Review None.
		Revision 2 IV&V Review This criteria not included in this review.	Revision 2 IV&V Review None.
Does the Software Project Plan describe nonconformance reporting and corrective action processes (nonconformance detection and reporting)?	NUREG/BR-0167 Figure 5-1 and Section 3 of Figure 5-1 of the NUREG for PMP “outline”.	Revision 0 IV&V Review Section 3.3 of the Project Plan addresses Nonconformance Reporting and Corrective Action. A discussion on <i>an impact assessment</i> is not discussed directly (but may be part of the MLSR and/or the SVVP). If it is the MLSR, for example, the paragraph should state as such. The SVVP, as stated earlier is incomplete and inadequate at this time. An excellent discussion on test processes and corrective actions on testing is very good.	Revision 0 IV&V Review An important “editorial” correction needs to be addressed. In the second paragraph, first sentence, it states that “corrective actions <i>should be</i> reported to the NRC. IV&V believes that corrective actions <i>will be</i> reported to NRC. Either they are reported or they are not. If there are instances in which they are not to be reported to NRC, the paragraph should state as such and provide examples when NRC would not be provided this information.
		Revision 1 IV&V Review Section 3.3 Nonconformance Reporting and Corrective Action of the Software Project Plan provide the information required by the NUREG.	Revision 1 IV&V Review None.
		Revision 2 IV&V Review Criteria satisfied.	Revision 2 IV&V Review None.
		Revision 0 IV&V Review As stated above, it is IV&V’s position that an impact assessment is not directly addressed.	Revision 0 IV&V Review Stated above.
Is an impact assessment performed on nonconformance items and corrective actions identified?	NUREG/BR-0167 Section 7	Revision 1 IV&V Review Section 3.3 Nonconformance Reporting and Corrective Action of the Software Project Plan provide the information required by the NUREG.	Revision 1 IV&V Review None.
		Revision 2 IV&V Review Criteria satisfied.	Revision 2 IV&V Review None.
How are nonconformance items, their related reports, and corrective actions tracked (e.g., DBMS, Excel Spreadsheet, etc.)?	NUREG/BR-0167 Section 7	Revision 0 IV&V Review This information is reported as being inserted into the Change Request tracking system – Is this the same as RCs?	Revision 0 IV&V Review None.
		Revision 1 IV&V Review Section 3.3 Nonconformance Reporting and Corrective Action specify “Testing- and QA-related nonconformances are reported through the SVVP and the Change Request tracking systems.”	Revision 1 IV&V Review None.

Software Project Plan			
Criteria	Source	Findings	Recommendations
		Revision 2 IV&V Review Criteria satisfied.	Revision 2 IV&V Review
Has the quality assessment approach and improvement approach been described?	NUREG/BR-0167 Section 5.2, Section 8	<p>Revision 0 IV&V Review</p> <p>This is described in Section 3.4 of the plan. The section provides an excellent discussion on how the developers, etc. will implement a quality approach and process improvement strategy. This is implicitly stated as being in a forthcoming QA Plan. A good discussion on bug fixes is also discussed where the developer obtains information regarding the severity of the bug and actions taken for bug correction/workaround/future release.</p>	<p>Revision 0 IV&V Review</p> <p>Further discussion on bug reporting should be implemented. Bugs should be part of the anomaly reporting process, which includes recording the bug on an anomaly report/form (template), to “document” information and the actions taken for the bug “correction”. Each form should be placed under configuration control. Metrics regarding these bug corrections (such as a trending report or a Pareto diagram) should be implemented to determine areas of the code, etc. where issues continually appear. For example, if bugs are found and corrected continually in one or two modules/objects, there is an indication that a module(s) is very complex and should be modified and tested to avoid the category of bug reoccurring.</p>
		<p>Revision 1 IV&V Review</p> <p>This is described in Section 3.5 of the plan. The section provides an excellent discussion on how the developers, etc. will implement a quality approach and process improvement strategy. This is implicitly stated as being in a forthcoming QA Plan. A good discussion on bug fixes is also discussed where the developer obtains information regarding the severity of the bug and actions taken for bug correction/workaround/future release.</p>	<p>Revision 1 IV&V Review</p> <p>However, further discussion on bug reporting should be implemented. Bugs should be part of the anomaly reporting process, which includes recording the bug on an anomaly report/form (template), to “document” information and the actions taken for the bug “correction”. Each form should be placed under configuration control. Metrics regarding these bug corrections (such as a trending report or a Pareto diagram) should be implemented to determine areas of the code, etc. where issues continually appear. For example, if bugs are found and corrected continually in one or two modules/objects, there is an indication that a module(s) is very complex and should be modified and tested to avoid the category of bug reoccurring.</p>
		<p>Revision 2 IV&V Review</p> <p>Criteria satisfied.</p>	<p>Revision 2 IV&V Review</p> <p>None.</p>
Are deliverables and dates due identified? (Also in the project schedule)?	Good Programming Practice	<p>Revision 0 IV&V Review</p> <p>Section 2.4 provides the discussion on deliverables (documented in NRC Form 189 and Form 173). The anticipated schedule is also documented in a table at the end of the section.</p>	<p>Revision 0 IV&V Review</p> <p>None.</p>
		<p>Revision 1 IV&V Review</p> <p>Section 2.5 Scheduling and 3.7 Deliverables provides the discussion on deliverables</p>	<p>Revision 1 IV&V Review</p> <p>None.</p>

		(documented in NRC Form 189 and Form 173). The anticipated schedule is also documented in a table at the end of section 2.5.	
		Revision 2 IV&V Review Section 2.5 Scheduling and 3.7 Deliverables provides the discussion on deliverables (documented in NRC Form 189 and Form 173). The anticipated schedule is also documented in a table at the end of section 2.5. Refer to section 3.4 Peer Reviews and Code Walkthroughs, Table 1 Summary of Major Life Cycle Reviews and Audits. Criteria satisfied.	Revision 2 IV&V Review None.
Are standards used for documentation identified and adhered to?	NUREG/BR-0167 Section 5.2.1	Revision 0 IV&V Review Standards for documentation are stated that they will be compliant to INL internal procedures unless specifically stated to conform to an external standard, such as an IEEE standard. As most of the documents have yet to be developed or updated, (the QAPP, SVVP for example), IV&V cannot determine at this time if the “adherence” to the standards are correctly implemented.	Revision 0 IV&V Review IV&V can neither pass nor fail this criterion until provided the required documents. Please note, that IV&V has already stated that the SVVP, RTM, and Users/Training manuals need substantial improvement.
		Revision 1 IV&V Review Section 3.1 Implementing the Life Cycle Tasks of the Statement of Work last paragraph specifies “ <i>QA-related documentation for the project should adhere to standards identified in NUREG/BR-0167, Software Quality Assurance Program and Guidelines.</i> ” Technical documentation to be published as a NUREG/CR follows guidance in NUREG-0650, Revision 2, Preparing NUREG-Series Publications.”	Revision 1 IV&V Review As the documents have yet to be developed or updated, IV&V cannot determine at this time if the “adherence” to the standards are correctly implemented. Therefore, IV&V can neither pass nor fail this criterion until provided the developed/updated documents.
		Revision 2 IV&V Review Section 3.1 Implementing the Life Cycle Tasks of the Statement of Work last paragraph specifies “ <i>QA-related documentation for the project should adhere to standards identified in NUREG/BR-0167, Software Quality Assurance Program and Guidelines.</i> ” Technical documentation to be published as a NUREG/CR follows guidance in NUREG-0650, Revision 2, Preparing NUREG-Series Publications.” Standards required to be included within documentation are currently being	Revision 2 IV&V Review None.

Software Project Plan			
Criteria	Source	Findings	Recommendations
Are coding conventions standards identified and adhered to?	NUREG/BR-0167 Section 5.2.1	<p>implemented. Refer to section 3.4 Peer Reviews and Code Walkthroughs, Table 1 Summary of Major Life Cycle Reviews and Audits.</p> <p>Revision 0 IV&V Review As stated above, “the development group has provided a link to the CodeGear Object Pascal Style Guide”.</p> <p>Revision 1 IV&V Review Section 2.6 Resources paragraph 5 specifies “<i>Developers of the SAPPHIRE team need to be familiar with DELPHI © Version 7 IDE, Modula-2 IDE, DOS batch files and scripting, and use of the Microsoft Windows platforms to support the interface upgrade and the functional improvement development and testing effort.</i>”</p>	<p>Revision 0 IV&V Review Without peer reviews and especially code walkthroughs to assist in determining if the use of the coding standards is implemented appropriately, IV&V must fail this criterion. In addition, Section 5.2.1, Required Inputs to the Contract specifically states that the list of deliverables should contain not only the software end products but also presentation materials and minutes from formal reviews. It also states that identification of applicable standards must be identified, which include programming language standards, coding standards, and documentation standards.</p> <p>Revision 1 IV&V Review However, without peer reviews and especially code walkthroughs to assist in determining if the use of the coding standards is implemented appropriately, IV&V must fail this criterion. In addition, the NUREG/BR-0167 Section 5.2.1, Required Inputs to the Contract specifically states that the list of deliverables should contain not only the software end products but also presentation materials and minutes from formal reviews. It also states that identification of applicable standards must be identified, which include programming language standards, coding standards, and documentation standards.</p> <p>Revision 2 IV&V Review Section 2.6 Resources paragraph 5 specifies “<i>Developers of the SAPPHIRE team need to be familiar with DELPHI © Version 7 IDE, Modula-2 IDE, DOS batch files and scripting, and use of the Microsoft Windows platforms to support the interface upgrade and the functional improvement development and testing effort.</i>” In addition, the NUREG/BR-0167 Section 5.2.1, Required Inputs to the Contract specifically states that the list of deliverables should contain not only the software end products but also presentation materials and minutes from formal reviews. Refer to section 3.4 Peer Reviews and Code Walkthroughs, Table 1 Summary of Major Life Cycle Reviews and Audits. Criteria satisfied.</p>

Software Project Plan			
Criteria	Source	Findings	Recommendations
Are code and documentation inspections and reviews identified, recorded, and under CM Control?	None specified.	<p>Revision 0 IV&V Review As stated above, code inspections via code walkthroughs and peer reviews are not occurring per NRC Sponsor request/requirement.</p> <p>Revision 1 IV&V Review Code inspections via code walkthroughs and peer reviews are not occurring per NRC Sponsor request/requirement.</p> <p>Revision 2 IV&V Review Refer to section 3.4 Peer Reviews and Code Walkthroughs, Table 1 Summary of Major Life Cycle Reviews and Audits. Criteria satisfied.</p>	<p>Revision 0 IV&V Review Presentation materials and minutes from these formal reviews are required by the NUREG. Documentation on how to use the code (such as the User's Guide and Workbook) are incomplete and incorrect (steps are absent).</p> <p>Revision 1 IV&V Review Presentation materials and minutes from these formal reviews are required by the NUREG.</p> <p>Revision 2 IV&V Review None.</p>

Table 4-2 Project Tracking and Oversight

		Project Tracking and Oversight		
Criteria	Source	Findings		Recommendations
Is monitoring, assessing, and reporting technical progress performed and actual results and performance tracked against the Software Project Plan?	NUREG/BR-0167 Section 5.3	Revision 0 IV&V Review Information on monitoring, assessing and reporting performance is discussed in Section 2.2 of the Project Plan.	Revision 0 IV&V Review None.	Revision 0 IV&V Review None.
		Revision 1 IV&V Review Information on monitoring, assessing and reporting performance is discussed in Section 2.3 Tracking and Oversight Approach of the Software Project Plan.	Revision 1 IV&V Review None.	Revision 1 IV&V Review None.
		Revision 2 IV&V Review Criteria satisfied.	Revision 2 IV&V Review None.	Revision 2 IV&V Review None.
		Revision 0 IV&V Review Section 5.3 of the NUREG states ‘Implementation of planned verification and validation, configuration management , and quality assessment and implementation activities are part of the ordinary tracking and oversight functions’. CM is not found in this section. However, it is discussed in Section 2.3.	Revision 0 IV&V Review None.	Revision 0 IV&V Review None.
		Revision 1 IV&V Review Section 5.3 Project Tracking and Oversight of the NUREG states “Implementation of planned verification and validation, configuration management , and quality assessment and implementation activities are part of the ordinary tracking and oversight functions”. Configuration Management is not discussed in section 2.3 Tracking and Oversight Approach. However, it is discussed in Section 2.7 Configuration Management.	Revision 1 IV&V Review None.	Revision 1 IV&V Review None.
		Revision 2 IV&V Review Criteria satisfied.	Revision 2 IV&V Review None.	Revision 2 IV&V Review None.
Are technical progress, costs, critical target computing resources, schedule, and risks tracked quantitatively?	NUREG/BR-0167 Section 5.3	Revision 0 IV&V Review Technical progress, costs and schedule variances, etc. are reported in Section 2.2 of the plan. The CV and SV identify schedule and costs quantitatively. Section 2.5 of the Project Plan states, “Personnel from the INL’s Risk, Reliability, and NRC Programs Department shall be responsible for risk assessment support and for	Revision 0 IV&V Review None.	Revision 0 IV&V Review None.

Project Tracking and Oversight			
Criteria	Source	Findings	Recommendations
		development and maintenance of the SAPHIRE software”.	Revision 1 IV&V Review Technical progress, costs and schedule variances, etc. are reported in Section 2.3 Tracking and Oversight Approach of the plan. Section 2.6 Resources of the Project Plan states, “Personnel from the INL’s Risk, Reliability, and NRC Programs Department shall be responsible for risk assessment support and for development and maintenance of the SAPHIRE software”.
			Revision 2 IV&V Review Criteria satisfied.
Does the PM determine and report schedule, cost status of variances from the baseline plan? (Is there a Baseline Plan(s) and is it under CM Control?)	NUREG/BR-0167 Section 5.3	Revision 0 IV&V Review Baselines are discussed in Section 2.1 and also discussed in Section 2.2 as follows. “The task-oriented schedule and budget for each project is established by the PI in conjunction with the financial controls person. The PI will determine if there is a need to re-baseline the schedule and/or budget”. Baselines are identified in Section 2.3 as follows. “Configuration Management and Change Control to monitor and uniquely identify baselines, changes that are requested, evaluated, approved, and tested, as well as backup and recovery actions”.	Revision 1 IV&V Review None.
		Revision 2 IV&V Review Criteria satisfied.	Revision 1 IV&V Review Baselines are discussed in Section 2.1 Planning Approach and also discussed in Section 2.3 Tracking and Oversight Approach as follows: “The task-oriented schedule and budget for each project is established by the PI in conjunction with the financial controls person. The PI will determine if there is a need to re-baseline the schedule and/or budget”. Baselines are identified in Section 2.4 Organization, Tasks, and Responsibilities as follows: “Configuration Management and Change Control to monitor and uniquely identify baselines, changes that are requested, evaluated, approved, and tested, as well as backup and recovery actions”.
			Revision 2 IV&V Review

Project Tracking and Oversight			
Criteria	Source	Findings	Recommendations
Are corrective actions taken when actual results and performance taken if significant deviations occur between the Software Project Plan and current schedule, including but not limited to adding staff, extending work week, and or changing the skill mix?	NUREG/BR-0167 Section 5.3	<p>Criteria satisfied.</p> <p>Revision 0 IV&V Review This information is found in section 2.2 of the plan.</p> <p>Revision 1 IV&V Review This information is found in section 2.3 Tackling and Oversight Approach of the Software Project plan.</p> <p>Revision 2 IV&V Review Criteria satisfied.</p>	<p>None.</p> <p>Revision 0 IV&V Review None.</p> <p>Revision 1 IV&V Review None.</p> <p>Revision 2 IV&V Review None.</p>

Table 4-3 Risk Management

Criteria	Source	Findings	Risk Management	Recommendations
Is a Risk Management Plan established?	NUREG/BR-167, Section 5.8	Revision 0 IV&V Review Risk Management is addressed in section 2.2 of the Software Project Plan, Project Number: N6423, for U.S. Nuclear Regulatory Commission (NRC) Project: SAPHIRE 8, Document ID: INL/EXT-09-15853. Criteria satisfied.	Revision 0 IV&V Review It is the recommendation of IV&V that a Risk Management and Risk Mitigation plan be developed for the SAPHIRE 8 software development.	Revision 0 IV&V Review
Does the Risk Management Plan identify, assess, document, and rank resources and schedule risks?	NUREG/BR-167, Section 5.8.1	Revision 0 IV&V Review An INL Proposal Risk and Evaluation Preparation System (PREPS) entry was created (PREPS ID: 0807-C.C-41-000454). Criteria satisfied.	Revision 0 IV&V Review	None.
Has a Risk Mitigation Plan been developed (or incorporated into a Risk management Plan) and is it under CM Control?	NUREG/BR-167, Section 5.8.2	Revision 0 IV&V Review Risk mitigation activities are stipulated in the NRC Form 189, as deemed appropriate. Criteria satisfied.	Revision 0 IV&V Review	None.

Table 4-4 Software Quality Assurance Plan

Software Quality Assurance Plan				
Criteria	Source	Findings	Recommendations	
Software quality assurance is the planned and systematic pattern of all actions necessary to provide adequate confidence that a software product conforms to established technical requirements.	NUREG/BR-0167, Software Quality Assurance Program and Guidelines, section 1.2 Scope and Applicability.	<p>Revision 0 IV&V Review</p> <p>Section 1.1 Project Background and Objectives first sentence states “This Quality Assurance (QA) Plan documents the QA activities that will be managed by the INL related to JCN N6423”.</p> <p>JCN N6423 Revision 5, Date: 04/20/09, I. Task 9: Quality Assurance specifies that “INL will support a variety of verification and validation (V&V) activities, including support of a NRC peer review, audits, testing, maintenance, and modifications of the SAPHIRE 8 software”</p> <p>Section 1.2 Project Scope and Organization last paragraph states “INL will follow NRC Management Directive 11.7 “Procedures for Placement and Monitoring of Work with the Department of Energy” related to software development. This directive suggests that “all software development, modification, or maintenance tasks shall follow general guidance provided in NUREG/BR-0167 “Software Quality Assurance Program and Guidance.” SAPHIRE 8 will follow the requirements for Level 1 software defined in Section 1.2 of NUREG/BR-0167. The NRC will perform an audit of the software QA implementation once a year against the requirement of NUREG/BR-0167”.</p> <p>Criteria satisfied.</p>	<p>Revision 0 IV&V Review</p> <p>Minor corrections for the Software Quality Assurance Plan.</p>	
		<p>Revision 1 IV&V Review</p> <p>Criteria satisfied.</p>	<p>Revision 0 IV&V Review</p> <p>None.</p>	

Table 4-5 Software Configuration Management Plan

Software Configuration Management Plan				
Criteria	Source	Findings	Recommendations	
Does the Configuration Management approach/methodology identify, define and reference procedures used for establishing and maintaining project baselines?	NUREG/BR-0167 Sections 2.5, 6.2, 6.4	<p>Revision 0 IV&V Review Section 1.2 Project Scope and Organization reference DOE Order 414.1C Quality Assurance, 10 CFR 830 Subpart A, Nuclear Safety Management, ASME NQA-1-2000 Quality Assurance Requirements for Nuclear Facility Applications, PDD-13610 Software Quality Assurance Program, LRD-13600 Software Quality Assurance, LWP-13620 Software Quality Assurance and NUREG/BR-0167 Software Quality Assurance Program and Guidelines.</p> <p>Section 1.2 Project Scope and Organization, last paragraph, last sentence states “<i>SAPHIRE 8 will follow the requirements for Level 1 software defined in Section 1.2 of NUREG/BR-0167</i>”.</p>	<p>Revision 0 IV&V Review Suggest referring to NUREG-BR-0167 Software Quality Assurance Program and Guidelines, section 6.2 Baselines for reference to all required information to be included in baselines. Section 1.3 does not specifically address the items included in the baselines.</p>	
Does the Configuration Management approach/methodology identify, define and reference procedures used for establishing and performing change control?	NUREG/BR-0167 Section 6	<p>Revision 1 IV&V Review Criteria satisfied.</p>	<p>Revision 1 IV&V Review None.</p>	
Does the Configuration Management approach/methodology identify, define and reference procedures used for establishing and performing change control?	NUREG/BR-0167 Section 6	<p>Revision 0 IV&V Review Section 1.2 Project Scope and Organization reference DOE Order 414.1C Quality Assurance, 10 CFR 830 Subpart A, Nuclear Safety Management, ASME NQA-1-2000 Quality Assurance Requirements for Nuclear Facility Applications, PDD-13610 Software Quality Assurance Program, LRD-13600 Software Quality Assurance, LWP-13620 Software Quality Assurance and NUREG/BR-0167 Software Quality Assurance Program and Guidelines.</p> <p>Section 1.2 Project Scope and Organization, last paragraph, last sentence states “<i>SAPHIRE 8 will follow the requirements for Level 1 software defined in Section 1.2 of NUREG/BR-0167</i>”.</p>	<p>Revision 0 IV&V Review Suggest referring to NUREG-BR-0167 Software Quality Assurance Program and Guidelines, section 6.3 Change Control for reference to all required information to be included in the change control procedure.</p>	
Does the Configuration Management approach/methodology identify, define and reference procedures used for establishing and performing change control?	NUREG/BR-0167 Section 6	<p>Revision 1 IV&V Review Criteria satisfied.</p>	<p>Revision 1 IV&V Review None.</p>

Items under CM Control?	Section 6 and 7	Section 1.3 Configuration Management Approaching paragraph 8 states “ <i>Bug fixes and all supporting documentation are placed under configuration control</i> ”.	Suggest referring to NUREG-BR-0167 Software Quality Assurance Program and Guidelines, section 6.2 Baselines for reference to all required information to be included in baselines.
		Revision 1 IV&V Review Section 1.3 Configuration Management Approaching paragraph 8 states “ <i>Bug fixes and all supporting documentation are placed under configuration control</i> ”. Criteria satisfied.	Revision 1 IV&V Review None.
Are the monthly progress reports under configuration management control?	NUREG/BR-0167 Section 6	Revision 0 IV&V Review Monthly progress reports currently are not in the SAPHIRE Revision Control System (RCS). Criteria satisfied.	Revision 0 IV&V Review Suggest referring to NUREG-BR-0167 Software Quality Assurance Program and Guidelines, section 6.2 Baselines for reference to all required information to be included in baselines.
		Revision 1 IV&V Review Monthly progress reports are being added into the SAPHIRE Revision Control System (RCS). Criteria satisfied.	Revision 1 IV&V Review None.
Are peer reviews and structured walkthrough documents/completed forms under configuration control?	NUREG/BR-0167 Section 3.2.3	Revision 0 IV&V Review Code walkthroughs and Peer Reviews would assist in making this determination apparent but IV&V has not identified evidence that these requirements/reviews have been performed. Criteria satisfied.	Revision 0 IV&V Review Suggest referring to NUREG-BR-0167 Software Quality Assurance Program and Guidelines, section 6.2 Baselines for reference to all required information to be included in baselines.
		Revision 1 IV&V Review Section 1.3 Configuration Management Approach, paragraph 6 states “ <i>Quality assurance reviews configuration management and control processes to ensure that only authorized changes are made to the software. All software modules that have been tested, documented, and approved for inclusion into the next release of the software are baselined</i> ”. Paragraph 7 states “ <i>SAPHIRE uses a configuration management database as a control library for all information related to the development of software fixes, enhances, baselines, and subsequent releases. Processes are in place to uniquely identify all components, modules, documentation, error reports, test suites, and test results through the establishment of a configuration control tracking number</i> ”. Criteria satisfied.	Revision 1 IV&V Review None.

Criteria	Source	Findings	Recommendations
Has the “Test Plan” and “Test Suite” for validating the software (by the development team) been addressed?	NUREG/BR-0167 Appendix B	<p>Design, section 4.5 Core Analysis Design.</p> <p>Revision 0 IV&V Review Section 4.6 Embedded Macro Design references the previously used Microsoft Visual Test suite, but no reference to the hardware platform used for testing. Section 5 Test Specification lists the features to be tested and features not tested. No reference is made to address the actual Test Plan and Test Suite for validating the software in section 4 Design Specification.</p>	<p>Revision 0 IV&V Review Provide information addressing the Test Plan and Test Suite for validating the software.</p>
		<p>Revision 1 IV&V Review Refer to section 4.6 Embedded Macro Design. The SAPHIRE Version 8 Software Verification and Validation Plan – Volume II (INL/EXT-05-00821), sections 6 Test Specification, 7 Test Methodologies, 8 Test Phases and 9 Development and Test Environment address these criteria.</p>	<p>Revision 1 IV&V Review Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Design and Interface Design Revision 1 Document ID: INL/EXT-09-17069.</p>
Has the RTM been updated to map the design components back to the defined requirements and are the design components/requirement s mapped to test cases?	NUREG/BR-0167 Section 4.3	<p>The Requirements Traceability Matrix is incomplete. Section numbers specified in the RTM do not match section numbers within section 4 Design Specification. There are no individual test cases mapped to requirements and design components.</p>	<p>Revision 0 IV&V Review Update the RTM to map design components back to the defined requirements and test cases.</p>
		<p>Revision 1 IV&V Review The Requirements Traceability Matrix (RTM) as presented in the SAPHIRE Version 8 Software Verification and Validation Plan – Volume II, Appendix D Requirements Traceability Matrix, (INL/EXT-05-00821) is incomplete and currently does not show the traceability between software design components and software requirements. The RTM does not list design components that map to requirements. The test cases as listed in the RTM are incomplete (“NA”, “None”, “To be determined”).</p>	<p>Revision 1 IV&V Review Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Design and Interface Design Revision 1 Document ID: INL/EXT-09-17069.</p>
Has the acceptance criteria for specifying how to determine the validity of the software provided, given the results of the test cases?	NUREG/BR-0167 Section 2.6	<p>Section 6.3 Test Data and section 7.3 Sources of Data refer to acceptance criteria in general for all tests. Specific acceptance criteria given the results of each test case are not found.</p>	<p>Revision 0 IV&V Review Specify how to determine the validity of the software provided, given the results of the test cases.</p>
		<p>Revision 1 IV&V Review</p>	<p>Revision 1 IV&V Review</p>

Software Design and Interface Design			
Criteria	Source	Findings	Recommendations
	The following sections presented in the SAPHIRE Version 8 Software Verification and Validation Plan – Volume II (INL/EXT-05-00821) specifies how to determine the validity of the software given the results of the test cases.	<p>Section 7.1.1.2 PRA Elements Embodied within SAPHIRE 8.0 specifies “<i>The success criteria are a specification of the compliment of equipment that must successfully operate to achieve functional success for each branch point or top event. This specification is developed analytically. The success criteria are used to define the boundary conditions for the failure modeling embodied within the corresponding fault tree.</i>”</p> <p>Section 7.2.1 Test Descriptions provides test results verification criteria.</p> <p>Section 3.4 Test Data specifies “<i>The test acceptance criteria ranged from a single value (e.g., total core damage frequency) to hundreds of similar values (e.g., core damage frequency) from individual accident sequences to a set of dissimilar values (e.g., different importance measures for fault trees, moments, and percentiles from uncertainty sampling). In all cases, though, knowledgeable PRA personnel or statisticians at INL obtained and verified the results.</i>”</p> <p>Section 8.3 Sources of Data specifies “<i>For each test, criteria are developed to determine if SAPHIRE accomplished a task. This generation of acceptance criteria results in a significant amount of information, since a test may use multiple PRA models. For example, the first test (Test-01) is performed using 82 different databases. Also, where applicable, the test evaluated the different mechanisms in SAPHIRE to accomplish the same task. An example of this aspect is the ability to generate end state cut sets using either the predefined end state categories (on the event tree) or using the end state partition rules.</i>”</p>	Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Design and Interface Design Revision 1 Document ID: INL/EXT-09-17069.

Software Design and Interface Design			
Criteria	Source	Findings	Recommendations
		<p>Section 8.4 Entrance and Exit Criteria specifies <i>“The entrance criteria for testing are to obtain the stored test repository and associated project databases from the revision control system. The test scripts will be exercised as noted in the script. The exit criteria for testing are to check the suite test output results file for any failed tests. Note that one test has been designed to always fail and is used as a “false positive” results to ensure functionality of the designed comparison against the QA benchmarked results.”</i></p>	<p>Revision 0 IV&V Review None.</p>
Are the test case identifiers unique/unambiguous?	NUREG/BR-0167 Section 6.2, 2.6.2	<p>Revision 0 IV&V Review Test case identifiers are Test-01 through Test-66.</p> <p>Revision 1 IV&V Review Test case identifiers are listed in the SAPHIRE Version 8 Software Verification and Validation Plan – Volume II (INL/EXT-05-00821), section 7.2.1 Test Descriptions.</p>	<p>Revision 1 IV&V Review Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Design and Interface Design Revision 1 Document ID: INL/EXT-09-17069.</p>
Has a data dictionary been developed?	Software Engineering Practices	<p>Revision 0 IV&V Review Develop the Data Dictionary defining items computed in the code. What they are and what they do.</p> <p>Revision 1 IV&V Review The Data Dictionary has been developed. The Data Dictionary contains database table names, descriptions of the database tables and data types, data lengths and key information. The Data Dictionary does not contain information that defines items computed in the code, what they are and what they do. Define in the Data Dictionary items computed in the code, what they are and what they do.</p>	<p>Revision 0 IV&V Review Define in the Data Dictionary items computed in the code, what they are and what they do.</p> <p>Revision 1 IV&V Review Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Design and Interface Design Revision 1 Document ID: INL/EXT-09-17069.</p>
If the SRS is found to require an update, has the SRS been updated, information represented correctly, completely, and accurately in the SRS?	NUREG/BR-0167 Section 4.3, Section 6	<p>Revision 0 IV&V Review Refer to document Independent Verification and Validation Of SAPHIRE 8 Software Requirements Project Number: N6423 U.S. Nuclear Regulatory Commission, Document ID: INL/EXT-09-16789.</p> <p>Revision 1 IV&V Review Refer to document Independent Verification and Validation Of SAPHIRE 8 Software Requirements Project Number: N6423 U.S. Nuclear Regulatory Commission, Document ID: INL/EXT-09-16789.</p>	<p>Revision 0 IV&V Review Refer to document Independent Verification and Validation Of SAPHIRE 8 Software Requirements Project Number: N6423 U.S. Nuclear Regulatory Commission, Document ID: INL/EXT-09-16789.</p> <p>Revision 1 IV&V Review Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Design and Interface Design Revision 1 Document ID: INL/EXT-09-17069.</p>

Software Design and Interface Design			
Criteria	Source	Findings	Recommendations
Have all documents, including revised documents from the Requirements phase, been placed under Configuration Control and were Configuration Control procedures been performed completely and accurately?	NUREG/BR-0167 Section 6	<p>Commission, Document ID: INL/EXT-09-16789 Revision 1.</p> <p>Revision 0 IV&V Review The requirements are included in section 2 Software Requirements and section 3 Interface Requirements Specification, the design is in section 4 Design Specification and section 5 Test Specification is within the SAPHIRE Version 8 Software Verification and Validation Plan Volume I. Section 6 Test Methodologies is within the SAPHIRE Version 8 Software Verification and Validation Plan Volume II.</p> <p>Revision 1 IV&V Review SAPHIRE Version 8 Software Verification and Validation Plan Volume I (INL/EXT-05-00821) and SAPHIRE Version 8 Software Verification and Validation Plan Volume II (INL/EXT-05-00821) are baselined using the revision control system (RCS) described in the Software Configuration Management Plan (INL/EXT-09-16696).</p>	<p>Revision 0 IV&V Review None.</p> <p>Revision 1 IV&V Review Code walkthroughs and Peer Reviews would assist in making this determination apparent but IV&V has not identified evidence that these requirements/reviews have been performed (they are not under Configuration Control). IV&V has been directed to attend these reviews but it does not appear that these reviews are being performed.</p>
Have Peer Reviews, Software Requirements Reviews, Preliminary Design Reviews, Critical Design Reviews and Qualification Readiness Reviews been performed, with recorded results (usually via checklist or pre-approved form), and placed under configuration control?	NUREG/BR-0167 Section 3.1 and 3.2.2, 3.2.3	<p>Revision 0 IV&V Review Peer reviews are not occurring per NRC Sponsor request/requirement.</p>	<p>Revision 1 IV&V Review Previous reviews, SAPHIRE 8 Build Alpha Preliminary Design Review April 25, 2006, SAPHIRE 8 Design Review from Audit August 9, 2007, Design Review Comments On SDP Interface NRC April 23 2008, SAPHIRE 8.0.3.31 Design Review Modifications to Cut Set Viewer April 24, 2008, Design Review From Audit December 3, 2008, current code reviews using the SAPHIRE Version 8 Software Verification and Validation Plan – Volume II (INL/EXT-05-00821), Appendix C Coding Standards are baselined using the revision control system (RCS) described in the Software Configuration</p>

		Management Plan (INL/EXT-09-16696).	

Table 4-8 System Test Plan

		System Test Plan			
Criteria	Source	Findings		Recommendations	
Has a System Test Plan been initiated?	NUREG/BR-0167 Section 4.9.1	Revision 0 IV&V Review Refer to the SAPHIRE Version 8 System Test Plan Document ID: INL/EXT-09-16455. Criteria satisfied.		Revision 0 IV&V Review None.	
Does the System Test Plan identify WHAT test activities will be performed?	Appendix B, Glossary (Test Plan)	Revision 0 IV&V Review Section 1.2 Beta Testing states “Beta testing is following a beta test plan.” Section 3 Independent Verification and Validation (IV&V) states “For the high level areas, the IV&V team will be reviewing and testing as described in the NUREG/BR-0167 and IEEE STD 101202004...” . Section 4 Software Acceptance Test Plan states “The Software Acceptance Test Plan documents the acceptance tests that the INL will use to demonstrate that SAPHIRE 8 is ready for official release.” Criteria satisfied.		Revision 0 IV&V Review None.	
Does the System Test Plan identify the resources, team responsibilities, and techniques to plan, develop, and implement test activities through the life-cycle, and identify testing techniques and test phases?	NUREG/BR-0167 Section 5.2.4	Revision 0 IV&V Review Section 1.1 Introduction, paragraph 2 states ‘The SAPHIRE System Test Plan (STP) plan is structured around NUREG/BR-0167, Software Quality Assurance Program and Guidelines, (February 1993).’ The criterion is also satisfied in section 1.2 Beta Testing, section 3 Independent Verification and Validation (IV&V), section 4 Software Acceptance Test Plan and Life cycle Phase listed in Table 1 IV&V Tasks Based on NUREG/BR-0167. Criteria satisfied.		Revision 0 IV&V Review None.	

Table 4-9 Software Acceptance Test Plan

Software Acceptance Test Plan			
Criteria	Source	Findings	Recommendations
Does the test plan exercise or evaluate the software product or part of the software product by manual or automated means to verify that it satisfies specified requirements or to identify differences between expected and actual results?	NUREG/BR-0167 Section 3.2.4	<p>Revision 0 IV&V Review</p> <p>Section 2 Testing Approach specifies “The test approach used for SAPHIRE Version 8 will be based upon the test approach for previous releases of the SAPHIRE tool. Taking into consideration lessons learned from the SV&V efforts, where applicable, actual tests and test specifications from the older testing were used in the SV&V.</p> <p>Additional tests were developed specifically for the newer SV&V process, primarily due to the fact that the test could be automated. This <i>automation aspect of testing allows the testing team to rerun a battery of calculations as many times as they wish, regardless of the complexity of the test.</i>”</p> <p>Section 2.3 User-Interface Testing specifies “The software development team is investigating a way to test the user interface with a updated scripting technology. This testing approach would allow the team to build scripts with a tool that can simulate user keystrokes and actions. This approach would allow INL to perform automated testing on the user interface and allow INL to do memory leak checking on repetitive user activities without devoting a user to do it.”</p> <p>Section 3.2 Plant Models Available In SAPHIRE 8.0 specifies “Originally, the set of written procedures developed for manually testing the ten lead plant models were obtained. These procedures were translated into an automated test script, initially for the Byron (BYRN) and Peach Bottom (PBOT) models. Once these were completed, the automated test scripts for the other lead plant models were easily developed by changing only the inputs and the result tables associated with the script. These changes were subsequently checked to ensure that the proper analysis steps were being applied.”</p>	<p>Revision 0 IV&V Review</p> <p>Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Acceptance Test Plan Document ID: INL/EXT-10-18081.</p>

Software Acceptance Test Plan			
Criteria	Source	Findings	Recommendations
Is each software unit being separately tested?	NUREG/BR-0167 Section 3.2.4	<p>Section 3.6 Requirements Validation specifies <i>“The entire automated test suite is performed on the application. The test scenarios validate requirements at the system level. A PRA Analyst reviews test data collected from the test scenarios to ensure consistency with predicted results.”</i></p> <p>Revision 0 IV&V Review Section 3.6 Requirements Validation specifies <i>“Additionally, prototype testing, unit testing and integration testing will be performed on the areas of code affected by the interface upgrade.</i></p> <p><i>Prototype testing is the testing of a new feature to see if it has been implemented correctly and if the design of that feature was adequate. This would be done to give the developer a confirmation of that the feature as designed meets the needs of the user. Unit testing is the testing of individual functional units of the code. The main difference between unit testing and prototype testing is that the prototype testing helps set the requirements while unit testing ensures that the unit meets the requirements.</i></p> <p><i>Integration testing is the testing of the entire code. It is mainly the testing of how all the individual units work together to ensure that the units interact properly and according to requirements.”</i></p>	<p>Revision 0 IV&V Review Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Acceptance Test Plan Document ID: INL/EXT-10-18081.</p>
Is integration testing being carried out?	NUREG/BR-0167 Section 3.2.4	<p>Revision 0 IV&V Review Section 3.6 Requirements Validation specifies <i>“Additionally, prototype testing, unit testing and integration testing will be performed on the areas of code affected by the interface upgrade.</i></p> <p><i>Prototype testing is the testing of a new feature to see if it has been implemented correctly and if the design of that feature was adequate. This would be done to give the developer a confirmation of that the feature as designed meets the needs of the user. Unit testing is the testing of individual functional units of the code. The main difference between unit testing and prototype testing is that the prototype testing helps set the requirements while unit testing ensures that the unit meets the requirements.</i></p>	<p>Revision 0 IV&V Review Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Acceptance Test Plan Document ID: INL/EXT-10-18081.</p>

Software Acceptance Test Plan			
Criteria	Source	Findings	Recommendations
Are the test descriptions within the test plan sponsor-approved?	NUREG/BR-0167 Section 3.2.4.3	<p><i>Integration testing is the testing of the entire code. It is mainly the testing of how all the individual units work together to ensure that the units interact properly and according to requirements.”</i></p> <p>Revision 0 IV&V Review Refer to the REVISION LOG page 1. Multiple updates have been made based upon NRC comments.</p>	<p>Revision 0 IV&V Review Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Acceptance Test Plan Document ID: INL/EXT-10-1808.</p> <p>Revision 0 IV&V Review Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Acceptance Test Plan Document ID: INL/EXT-10-1808.</p>
Does the test plan require test witnesses?	NUREG/BR-0167 Section 3.2.4.3	<p>Revision 0 IV&V Review Section 4.2 Participants specifies “A member of the software development team starts the test run and examines the test results. A member of the SV&V team should be present at the start of the test and when the software team member checks the overall result of the test run.”</p>	<p>Revision 0 IV&V Review Section 1.2 Project Scope and Organization specifies “The organizational structure of the SAPHIRE software development team influences and controls the software quality. Roles and responsibilities within the organizational structure provide the development team with the freedom, flexibility and objectivity to evaluate and monitor the software quality as well as verify problem resolutions. This structure enables the development team to tailor the maintenance and development activities, techniques, and methodologies for problem identification, reporting and resolution, testing, records retention, and configuration management.”</p>
Does the test plan require a record of all nonconformances?	NUREG/BR-0167 Section 3.2.4.3	<p>Revision 0 IV&V Review Section 3.5 Test Documents specifies “All product documentation is in accordance with Customer procedures documented in the NRC Form 189, Revision 7.” NRC Form 189, JCN Y6394, Revision 7, Section 8 Reporting Requirements and Schedule, Section A Technical Reports, third bullet “The testing and validation efforts and results”.</p>	<p>Revision 0 IV&V Review Section 3.5 Test Documents specifies “All product documentation is in accordance with Customer procedures documented in the NRC Form 189, Revision 7.” NRC Form 189, JCN Y6394, Revision 7, Section 8 Reporting Requirements and Schedule, Section A Technical Reports, third bullet “The testing and validation efforts and results”.</p>
Does the test plan provide regression	NUREG/BR-0167 Section 3.2.4.3	<p>Revision 0 IV&V Review Section 2.2 Features Not Tested specifies</p>	<p>Revision 0 IV&V Review Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Acceptance Test Plan Document ID: INL/EXT-10-1808.</p>

Software Acceptance Test Plan			
Criteria	Source	Findings	Recommendations
testing to ensure that changes did not introduce errors into previously accepted software?		<p><i>“However, if a modification is made to SAPPHIRE, for example, to update the recovery rule algorithm, the existing test suite will ensure the modification did not change test results through regression testing. But the test suite does test the most commonly used mechanisms of performing tasks in SAPPHIRE.”</i></p>	<p>Revision 0 IV&V Review Refer to the Independent Verification and Validation Of SAPPHIRE 8 Software Acceptance Test Plan Document ID: INL/EXT-10-1808.</p>
Does the test plan prescribe the approach to be taken for intended testing activities?	NUREG/BR-0167 Appendix B	<p>Revision 0 IV&V Review Section 2 Testing Approach provides the information required.</p>	<p>Revision 0 IV&V Review Refer to the Independent Verification and Validation Of SAPPHIRE 8 Software Acceptance Test Plan Document ID: INL/EXT-10-1808.</p>

Does the test plan identify any risks requiring contingency planning?	NUREG/BR-0167 Appendix B	<p><i>one test has been designed to always fail and is used as a "false positive" results to ensure functionality of the designed comparison against the QA benchmarked results.</i></p> <p>Revision 0 IV&V Review Section 1.2 Project Scope and Organization provide the quality level designator that identifies the relative risk associated with the failure of items or activities.</p> <p><i>"For the SAPHIRE 8 development project, the INL-derived QA program (LWP-13620) quality level has been set at Quality Level 3."</i></p> <p>Quality Level 3 software is software whose failure creates "low" risk. This software requires a low degree of rigor during the software life cycle.</p>	<p>Revision 0 IV&V Review Refer to the Independent Verification and Validation Of SAPHIRE 8 Software Acceptance Test Plan Document ID: INL/EXT-10-18081.</p>

Table 4-10 Volume 3 Users' Guide

Criteria	Source	Findings	Recommendations
Is the User Manual complete, including: A description of User's interaction with the software, description of required training necessary to use the software, input and output specifications and formats with sample cases, limitations of the software, anticipated errors and user response to errors, error messages with workarounds (when applicable), information about user support?	NUREG/BR-0167 Section 4.7	Revision 0 IV&V Review The information presented within the Volume 3 Users' Guide provides a complete description of the user's interaction with the software, limitations and input and output specifications showing formats with sample cases. References to the description of required training necessary to use the software, anticipated errors and user response to errors, error messages with workarounds and information about user support were not found.	Revision 0 IV&V Review Refer to the Independent Verification and Validation Of SAPHIRE 8 Volume 3 Users' Guide Document ID: INL/EXT-10-18028.
Does the User Manual provide instructions on how to install, setup, and access the application?	NUREG/BR-0167 Section 2.6	Revision 0 IV&V Review Installation instructions are provided in section 1.4 Installation of SAPHIRE along with un-installation instructions in section 1.5 Un-installation of SAPHIRE. Setup instructions are given in section 1.6 SAPHIRE Project Settings and the sub-sections in section 1.7 SAPHIRE User Settings. Specific instructions for accessing the SAPHIRE 8 application were not found. The ABSTRACT states “ <i>This reference guide will introduce the SAPHIRE Version 8.0 software. A brief discussion of the purpose and history of the software is included along with general information such as installation instructions, starting and stopping the program, and some pointers on how to get around inside the program.</i> ” Next, database concepts and structure are discussed. Following that discussion are nine sections, one for each of the menu options on the SAPHIRE main menu, wherein the purpose and general capabilities for each option are furnished. Next, the capabilities and limitations of the software are provided.” The following	Revision 0 IV&V Review Refer to the Independent Verification and Validation Of SAPHIRE 8 Volume 3 Users' Guide Document ID: INL/EXT-10-18028.

Volume 3 Users' Guide			
Criteria	Source	Findings	Recommendations
Does the User Manual provide a complete, consistent, correct, and adequate coverage of software functionality and is it presented in a ‘logical’ and hierarchical order?	NUREG/BR-0167 Section 2.2, Section 4.3	Revision 0 IV&V Review The information presented within the Volume 3 Users' Guide provides a complete, consistent, correct, and adequate coverage of software functionality and is presented in a logical and hierarchical order.	Revision 0 IV&V Review Refer to the Independent Verification and Validation Of SAPHIRE 8 Volume 3 Users' Guide Document ID: INL/EXT-10-18028.
Does the User Manual provide screen shots, reports, examples etc. to provide end users' with typical/example outputs (for reference, help, etc.)?	NUREG/BR-0167 Section 4.7	Revision 0 IV&V Review Multiple screen shots, reports and examples are provided within the Volume 3 Users' Guide for reference.	Revision 0 IV&V Review Refer to the Independent Verification and Validation Of SAPHIRE 8 Volume 3 Users' Guide Document ID: INL/EXT-10-18028.
Does the User Manual provide instructions on accessing on-line help features (including User Support)?	NUREG/BR-0167 Section 4.7	Revision 0 IV&V Review The Volume 3 Users' Guide does not provide instructions for accessing the on-line help features or User Support. Information is provided on page v within the FOREWORD section referencing the seven volumes that address the use and capabilities of SAPHIRE Version 8. “This NUREG-series report comprises seven volumes, which address use and capabilities of SAPHIRE Version 8. Volume 1, “Overview/Summary,” gives an overview of the functions available in SAPHIRE and presents general instructions for using the software. Volume 2, “Technical Reference,” discusses the theoretical background behind the SAPHIRE functions. Volume 3, “SAPHIRE Users Guide,” provides installation instructions and a step-by-step approach to using the program’s features. Volume 4, “SAPHIRE Tutorial,” provides an example of the overall process of constructing a	Revision 0 IV&V Review Refer to the Independent Verification and Validation Of SAPHIRE 8 Volume 3 Users' Guide Document ID: INL/EXT-10-18028.

Criteria	Source	Findings	Recommendations
		<p>PRA database. Volume 5, "SAPHIRE Workspace Reference Guide," discusses the use of analysis Workspaces. Volume 6, "SAPHIRE Quality Assurance," discusses QA methods and tests.</p> <p>Lastly, Volume 7, "SAPHIRE Data Loading," assists the user in entering PRA data into SAPHIRE using the built-in MAR-D ASCH-text file data transfer process."</p>	

Attachment 5: Project Best Practices

The SAPHIRE team is improving the software development process by conducting Independent Verification and Validation activities to provide a process to support the Nuclear Regulatory Commission in ensuring a high-quality software development process and product through a formal process.

The SAPHIRE Independent Verification and Validation activities are being conducted by a team that is both technically and managerially separate from the organization responsible for developing the product. The verification process ensures that the products and processes of each major activity of the life cycle meet the standards for the products and the objectives of that major activity. The validation process demonstrates that the software meets its requirements. Testing is the process of detecting errors and verifying performance.

The SAPHIRE product is implementing and following the requirements for Level 1 software defined in Section 1.2 of NUREG/BR-0167 Software Quality Assurance Program and Guidelines, technical application software used in a safety decision.

The Nuclear Regulatory Commission will perform an audit of the software Quality Assurance implementation once a year against the requirements of NUREG/BR-0167 Software Quality Assurance Program and Guidelines.

SAPHIRE configuration management for version control, source code and documentation uses the Revision Control System to maintain the integrity of the software and its documentation. The Idaho National Laboratory software developers use version control for both the formally released SAPHIRE versions, as well as for source code. For each formal release of the software, the developers perform an acceptance test: the software must pass a suite of automated tests prior to official release. Independent verification and validation tests and test observations are also being performed as given in the Independent Verification and Validation Plan (INL/EXT-09-15649) to support the first general release version of SAPHIRE 8.

The organization, tasks, roles and responsibilities within the SAPHIRE team are defined. The organizational structure of the SAPHIRE software development team influences and controls the software quality. Roles and responsibilities within the organizational structure provide the development team with the freedom, flexibility and objectivity to evaluate and monitor the software quality as well as verify problem resolutions. This structure enables the development team to tailor the maintenance and development activities, techniques, and methodologies for problem identification, reporting and resolution, testing, records retention, and configuration management.

Peer reviews and Code Walkthroughs are being implemented. As part of the SAPHIRE 8 development, the team will perform and document, as appropriate, periodic peer reviews and code walkthroughs, including reviews of preliminary and critical designs proposals.

SAPHIRE has a defined quality assessment and improvement approach. Product quality is a key component of SAPHIRE. The SAPHIRE Quality Assurance processes documented in the report provides the basis for setting quality objectives, progress, and the necessary framework for quality improvements.

Attachment 6: Project Lessons Learned

Ensure that all software requirements are documented. The requirements form the basis for the software plans, products, and activities. Ensure that the documented requirements define the response of the software to anticipated classes of input data (including erroneous data) and provide the information and detail necessary to design the software (e.g., mathematical models, equations, data requirements). Because requirements inevitably change as a project evolves, manage the requirements throughout the development and maintenance efforts in accordance with well defined change control procedures

Ensure that all software requirements are uniquely defined as functional, performance, design constraints, attributes and external interface.

Ensure that all software requirements are testable. If a software requirement is not testable, then it is not a software requirement.

Conduct the Software Requirements Review at the end of the requirements definition to assure the intent, completeness, verifiability, consistency and technical feasibility of the requirements.

Ensure that all software design components are documented and meet the requirements defined in the software requirements documentation.

Ensure that all software design components are uniquely defined and specify the overall structure of the software so that it can be translated into code.

Conduct the Preliminary Design Review when the preliminary design (software architecture) has been designed to assure that the preliminary design is complete (meets all the requirements), verifiable (through testing or other means), consistent, and technically feasible.

Conduct the Critical Design Review when the design is complete to assure that the design is complete (meets all the requirements and meets design completion criteria), verifiable (through testing or other means), consistent, and technically feasible.

Ensure that the Requirements Traceability Matrix shows all software requirements are mapped to design components and test cases.

Conduct formal peer inspections in order to find errors.

Ensure that the documentation is maintained.

Attachment 7: CodeHealer Analysis

Table 7-1 provides an overview of the basic constructs used in the SAPHIRE version 8 source code using the source code analysis and verification tool *CodeHealer for Delphi* © Version 2.5.0. Any and all extra characters after the terminating “end.” of a program, unit or project file are ignored, and any extra lines are always treated as blank lines, regardless of what they contain. It is possible for the total number of lines to be greater than the sum of the number of blank lines, the number of code lines and the number of comment lines if one or more lines contain a number of spaces or tab characters and nothing else, since these lines do not fit in any of the counted categories.

The majority of the metrics values are self explanatory from their name, such as the number of characters, lines, units or other basic item, so are not defined further here. Certain metrics values, however, justify further explanation, and these are listed below.

Note that because the metric values are displayed on a module basis, the **Branches**, **Loops** and **Cyclomatic complexity** metrics values are calculated and shown as an **average** of the values for each function, procedure and (class) method in the module, rather than as a **total** for the module.

Branches – This metric value is the average number of branches per function or procedure that occur within the source code of the selected items. A branch in the source code is an “**if**”, “**goto**”, “**try .. except**” statement or a case item or “**else**” value of a “**case**” statement, and represents a point where the flow of control may take one of two alternative routes. The number of branches within a function, procedure or module is (historically) considered as a very basic indicator of its complexity.

Loops – This metric value is the total number of loops that occur within the source code of the selected items. A loop in the source code is a “**for**”, “**repeat**” or “**while**” statement, and represents a point where the flow of control may take one of two alternative routes on more than one occasion. The number of loops within a function, procedure or module is (historically) considered as a very basic indicator of its complexity.

Cyclomatic Complexity – This metric value was introduced by Thomas McCabe in 1976, and it measures the number of possible paths through a source code item. It is widely considered a broad measure of soundness and confidence for a program, and also gives an indication of the minimum number of test cases that are necessary to properly test each item of the program. The cyclomatic complexity of a module is calculated as the average of the cyclomatic complexity values of each function, procedure and (class) method of the module. Table 7-2 provides the individual SAPHIRE Version 8 source code files Cyclomatic Complexity. The cyclomatic complexity of a function, procedure or (class) method is calculated as:

$1 + \text{Branches} + \text{Loops} + \text{Number of logical "and" and "or" operations within conditional expressions}$ where **Branches** and **Loops** are calculated as defined above.

The Carnegie Mellon Software Engineering Institute definition of Cyclomatic Complexity can be viewed at “*CMU – Cyclomatic Complexity*”, and part of that definition is the following suggested set of threshold values that may be used to assess the risk associated with modifying a module:

Complexity	Risk evaluation for the module or program
1 – 10	Relatively simple, without much risk
11 – 20	More complex, moderate risk
21 – 50	Complex, high risk
Greater than 50	Untestable (very high risk)

To access the file contents shown in Table 7-1, refer to file “*SAPHIRE8-Metrics-100405.pdf*” included on the CD as an addendum to this report. To access the file:

1. Open Internet Explorer.
2. Select “Open” from the “File” menu.
3. The “Open” window will be displayed.
4. Select the “Browse...” button from the “Open” window.
5. The “Windows Internet Explorer” window will be displayed.
6. Navigate to the “*SAPHIRE8-Metrics-100405.pdf*” file located on the CD.
7. Select the “*SAPHIRE8-Metrics-100405.pdf*” file on the CD.
8. Select the “Open” button from the “Windows Internet Explorer” window.
9. The “Windows Internet Explorer” window will close.
10. Select the “OK” button from the “Open” window.

Figure 7-2 provides the SAPHIRE Version 8 Project Analysis using the Audits and Checks category options provided in Figure 7-3 and Figure 7-4. The analysis parses all source files into an internal tree to ensure that all symbols are available to be cross referenced and validated. The analysis results provide information on the following:

- Parsing errors
- Delphi directive names used as identifiers
- Delphi keywords used as identifiers
- Identifiers hiding others of the same name at a higher scope
- “if” statements followed by an empty statement
- Type assignment incompatibilities
- Undefined function return values
- Uninitialized variables
- Unreferenced global identifiers
- Unreferenced local identifiers
- Unused assigned values

The following provide the definitions for the messages as a result of the analysis:

A1001 Audit result message – The <item> is declared as deprecated.

A1002 Audit result message – The identifier <id> is also a Delphi directive.

A1003 Audit result message – The <item> is declared as experimental.

A1004 Audit result message – The <item> hides the <item> of the same name declared on line <n> of <filename>.

A1005 Audit result message – The identifier <id> is also a Delphi Keyword.

A1006 Audit result message – The <item> is declared as library dependent.

A1007 Audit result message – The <item> is declared as platform dependent.

C1001 Check result message – The array index expression can be outside the bounds of the array.

C1002 Check result message – The destination of the assignment is a constant so should not be modified.

C1003 Check result message – The “if” statement is followed by an empty statement.

C1004 Check result message – The constant expression is outside the range of valid values.

C1005 Check result message – The type <type> and <type> are not compatible.

C1006 Check result message – The return value of <function> is undefined in one or more code paths through its implementation.

C1007 Check result message – The <item> has not been assigned a value in one or more code paths.

C1008 Check result message – The source code at or before <item> is unreachable.

C1009 Check result message – The global <item> is declared but is never referenced.

C1010 Check result message – The local <item> is declared but is never referenced.

C1011 Check result message – The value assigned to <id> is never used.

To access the file contents shown in Figure 7-1, refer to file “*SAPHIRE8-Analysis-100405.pdf*” included on the CD as an addendum to this report. To access the file:

1. Open Internet Explorer.
2. Select “Open” from the “File” menu.
3. The “Open” window will be displayed.
4. Select the “Browse...” button from the “Open” window.
5. The “Windows Internet Explorer” window will be displayed.
6. Navigate to the “*SAPHIRE8-Analysis-100405.pdf*” file located on the CD.
7. Select the “*SAPHIRE8-Analysis-100405.pdf*” file on the CD.
8. Select the “Open” button from the “Windows Internet Explorer” window.
9. The “Windows Internet Explorer” window will close.
10. Select the “OK” button from the “Open” window.

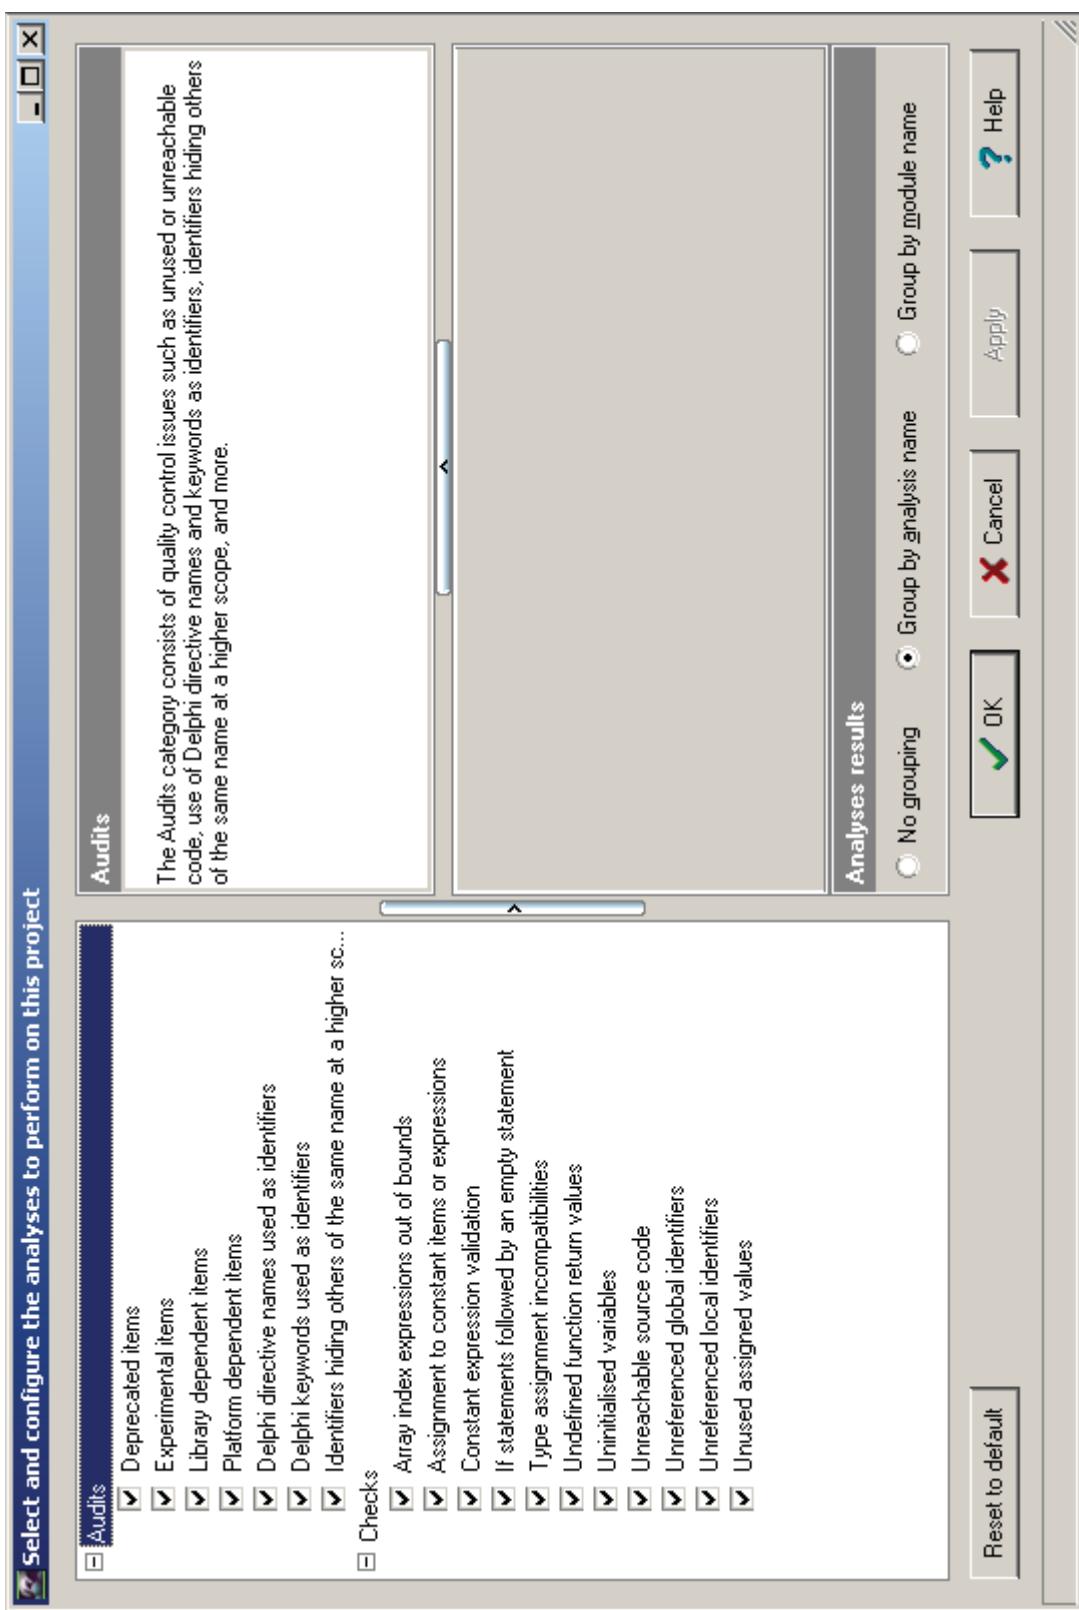

Figure 7-2 Audits Category Settings for CodeHealer Project SAPPHIRE Version 8 Analysis

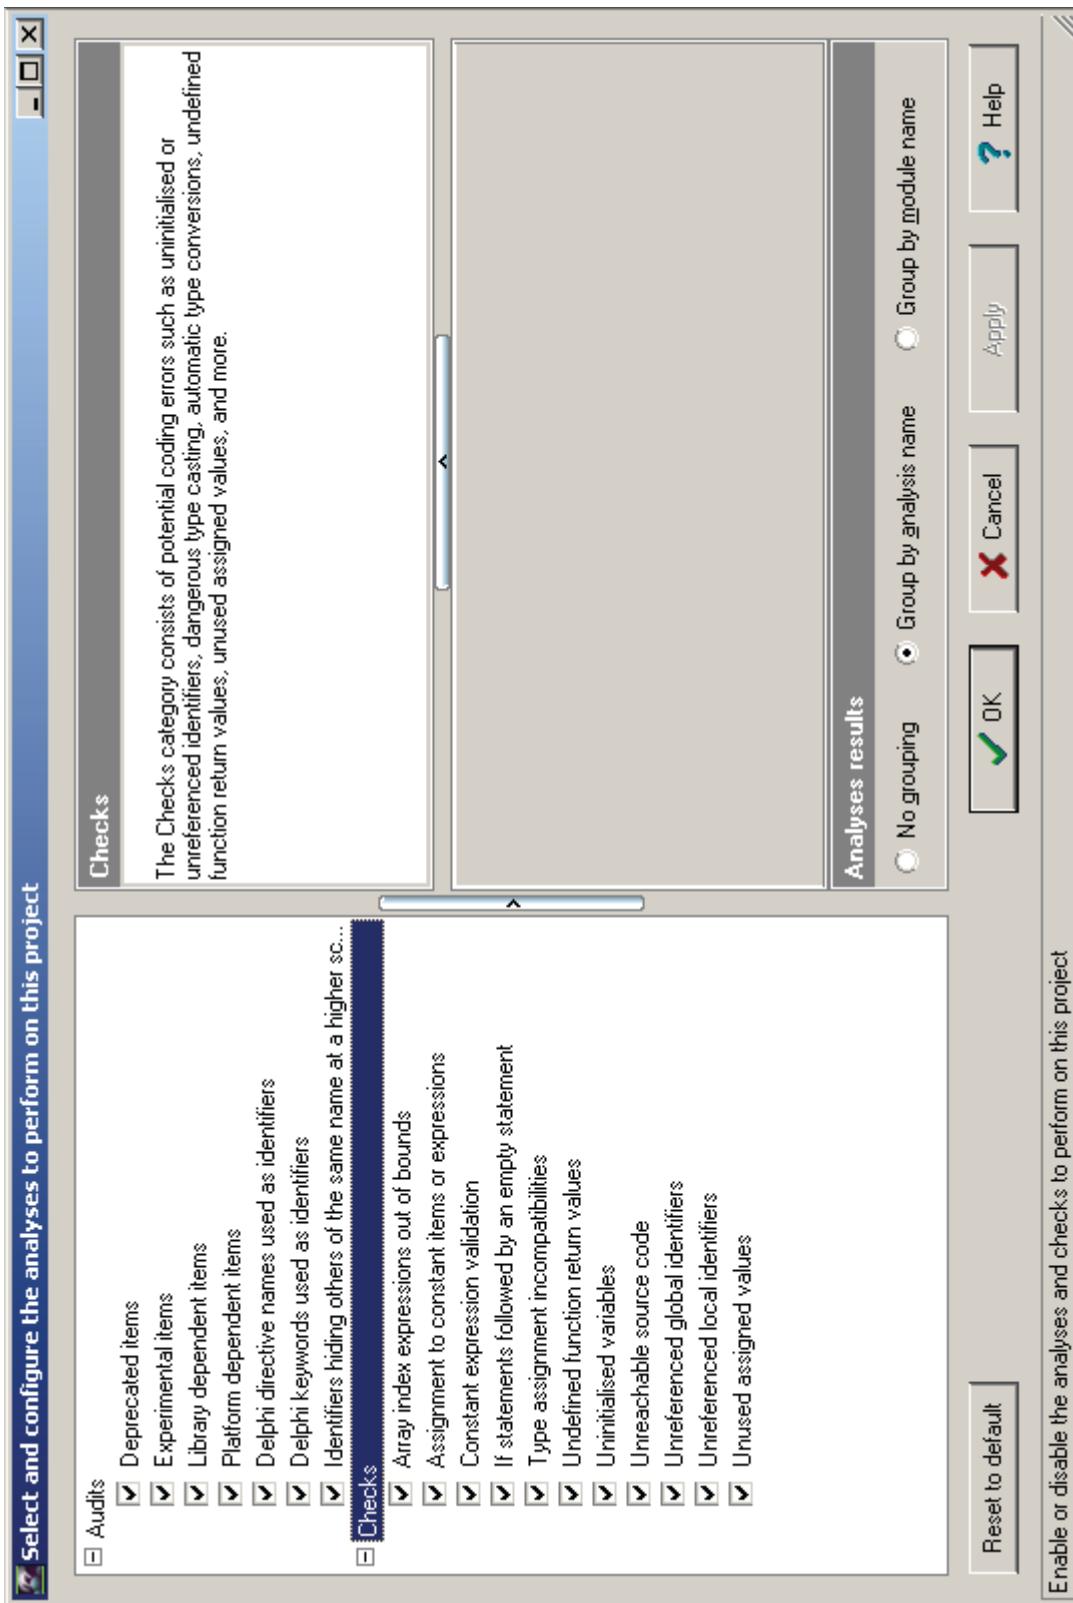

Figure 7-3 Checks Category Settings for CodeHealer Project SAPHIRE Version 8 Analysis

Attachment 8: Coverage Validator

Figure 8-1, Figure 8-2 and Figure 8-3 provides the coverage summary for the SAPHIRE version 8 source code using the source code coverage analyzer *Coverage Validator* © Version 4.10. The coverage summary for a Significance Determination Process analysis (Figure 8-1), Events and Condition Assessment analysis (Figure 8-2) and a General analysis (Figure 8-3) have been provided.

The figures show various coverage statistics with percentages where appropriate. No unit testing has been performed. The statistics displayed are:

- Number of files
- Number of visited files
- Number of unvisited files
- Number of 100% visited files

- Number of functions
- Number of visited functions
- Number of unvisited functions
- Number of 100% visited functions

- Number of branches
- Number of visited branches
- Number of unvisited branches
- Number of functions containing branches
- Number of 100% branch functions

- Number of lines
- Number of visited lines
- Number of unvisited lines
- Number of lines that could not be hooked
- Number of visits to lines

- Number of unit tests
- Number of successful unit tests
- Number of unsuccessful unit tests
- Number of unit test failures
- Number of unit test errors

To access the file contents shown in Figure 8-1, refer to file “*CoverageValidatorSDPSummaryReport.html*” included on the CD as an addendum to this report. To access the file:

1. Open Internet Explorer.
2. Select “Open” from the “File” menu.
3. The “Open” window will be displayed.
4. Select the “Browse...” button from the “Open” window.
5. The “Windows Internet Explorer” window will be displayed.
6. Navigate to the “*CoverageValidatorSDPSummaryReport.html*” file located on the CD.
7. Select the “*CoverageValidatorSDPSummaryReport.html*” file on the CD.

8. Select the “Open” button from the “Windows Internet Explorer” window.
9. The “Windows Internet Explorer” window will close.
10. Select the “OK” button from the “Open” window.

To access the file contents shown in Figure 8-2, refer to file
“*CoverageValidatorECASummaryReport.html*” included on the CD as an addendum to this report. To access the file:

1. Open Internet Explorer.
2. Select “Open” from the “File” menu.
3. The “Open” window will be displayed.
4. Select the “Browse...” button from the “Open” window.
5. The “Windows Internet Explorer” window will be displayed.
6. Navigate to the “*CoverageValidatorECASummaryReport.html*” file located on the CD.
7. Select the “*CoverageValidatorECASummaryReport.html*” file on the CD.
8. Select the “Open” button from the “Windows Internet Explorer” window.
9. The “Windows Internet Explorer” window will close.
10. Select the “OK” button from the “Open” window.

To access the file contents shown in Figure 8-3, refer to file

1. Open Internet Explorer.
2. Select “Open” from the “File” menu.
3. The “Open” window will be displayed.
4. Select the “Browse...” button from the “Open” window.
5. The “Windows Internet Explorer” window will be displayed.
6. Navigate to the “*CoverageValidatorECASummaryReport.html*” file located on the CD.
7. Select the “*CoverageValidatorECASummaryReport.html*” file on the CD.
8. Select the “Open” button from the “Windows Internet Explorer” window.
9. The “Windows Internet Explorer” window will close.
10. Select the “OK” button from the “Open” window.

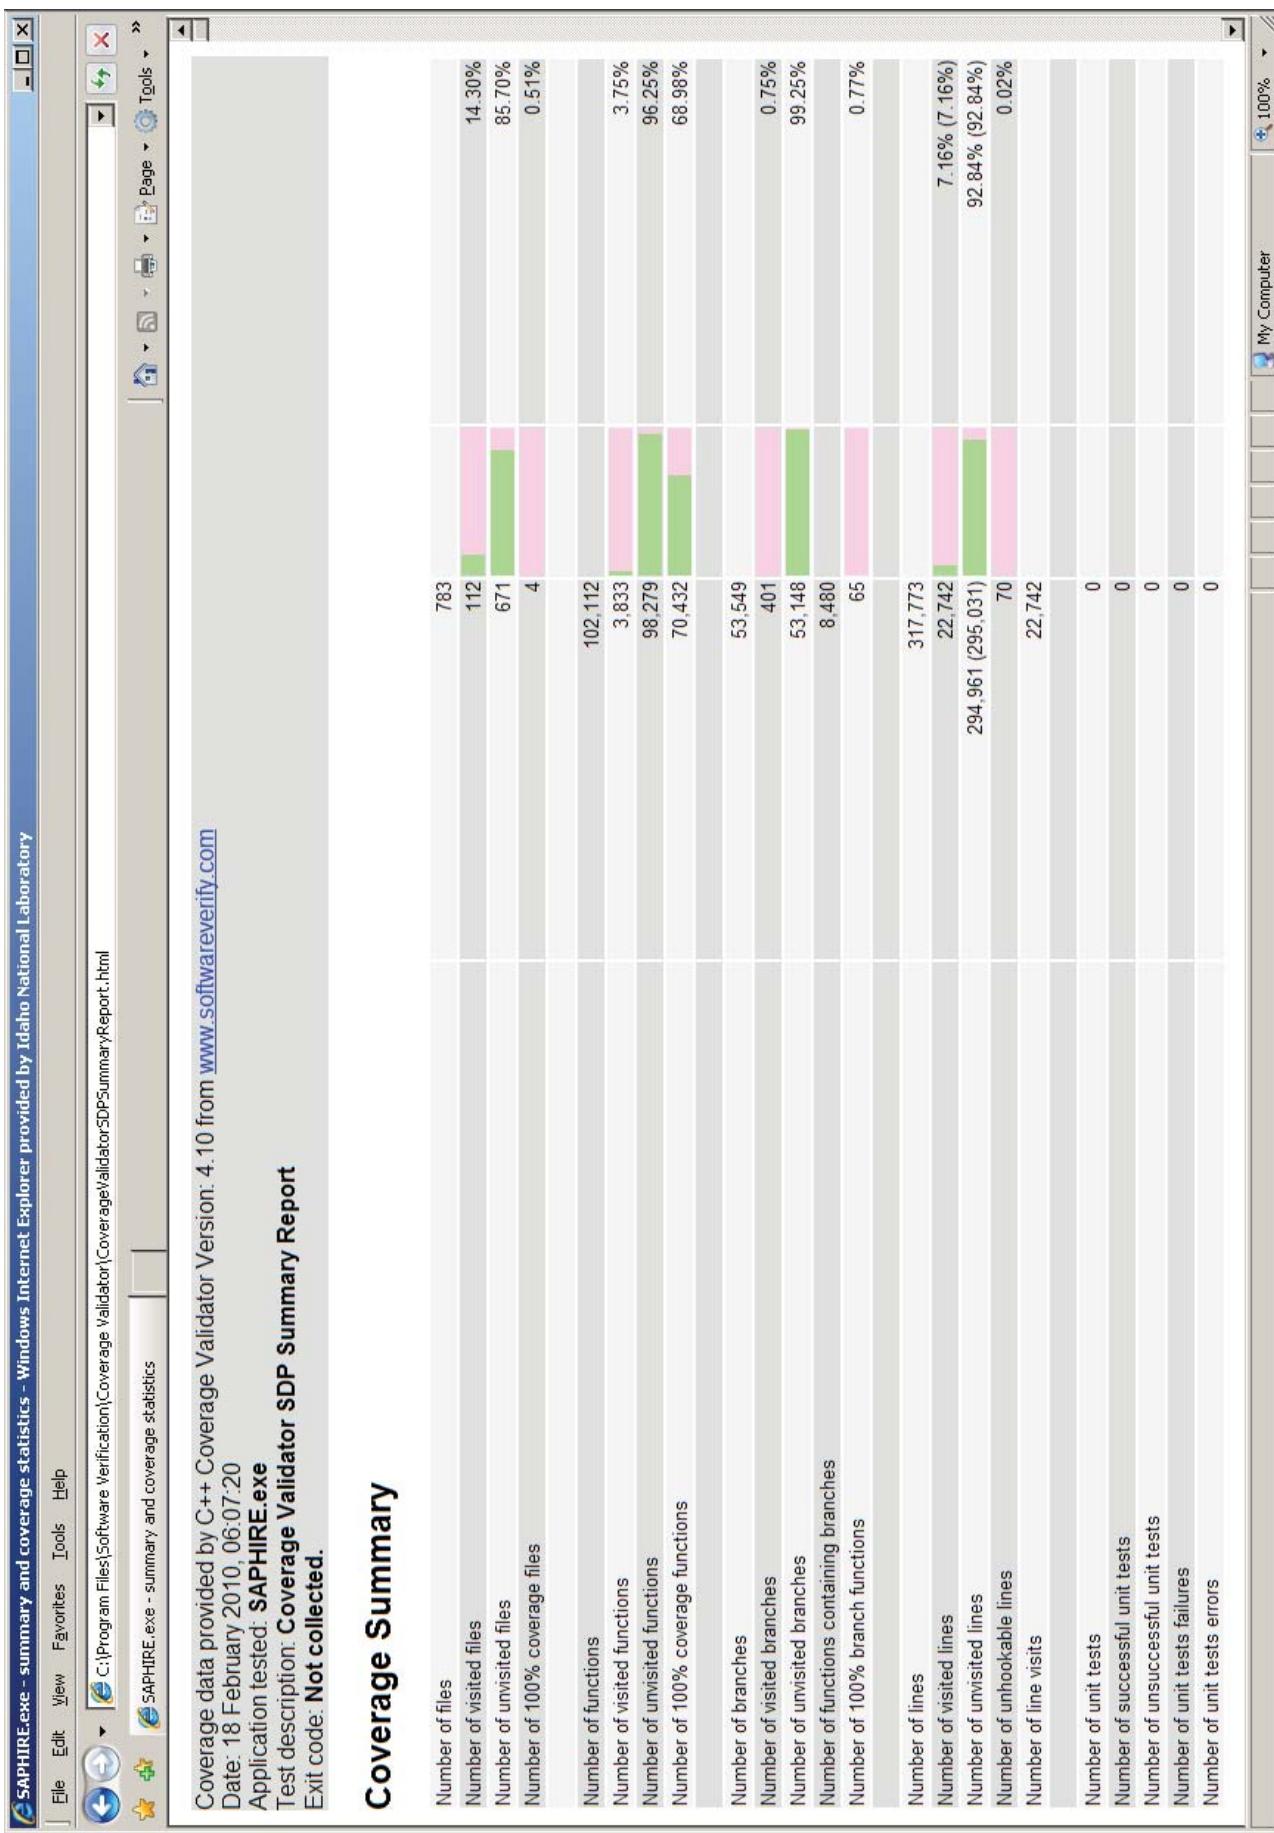

Figure 8-1 Coverage Validator SDP Summary Report

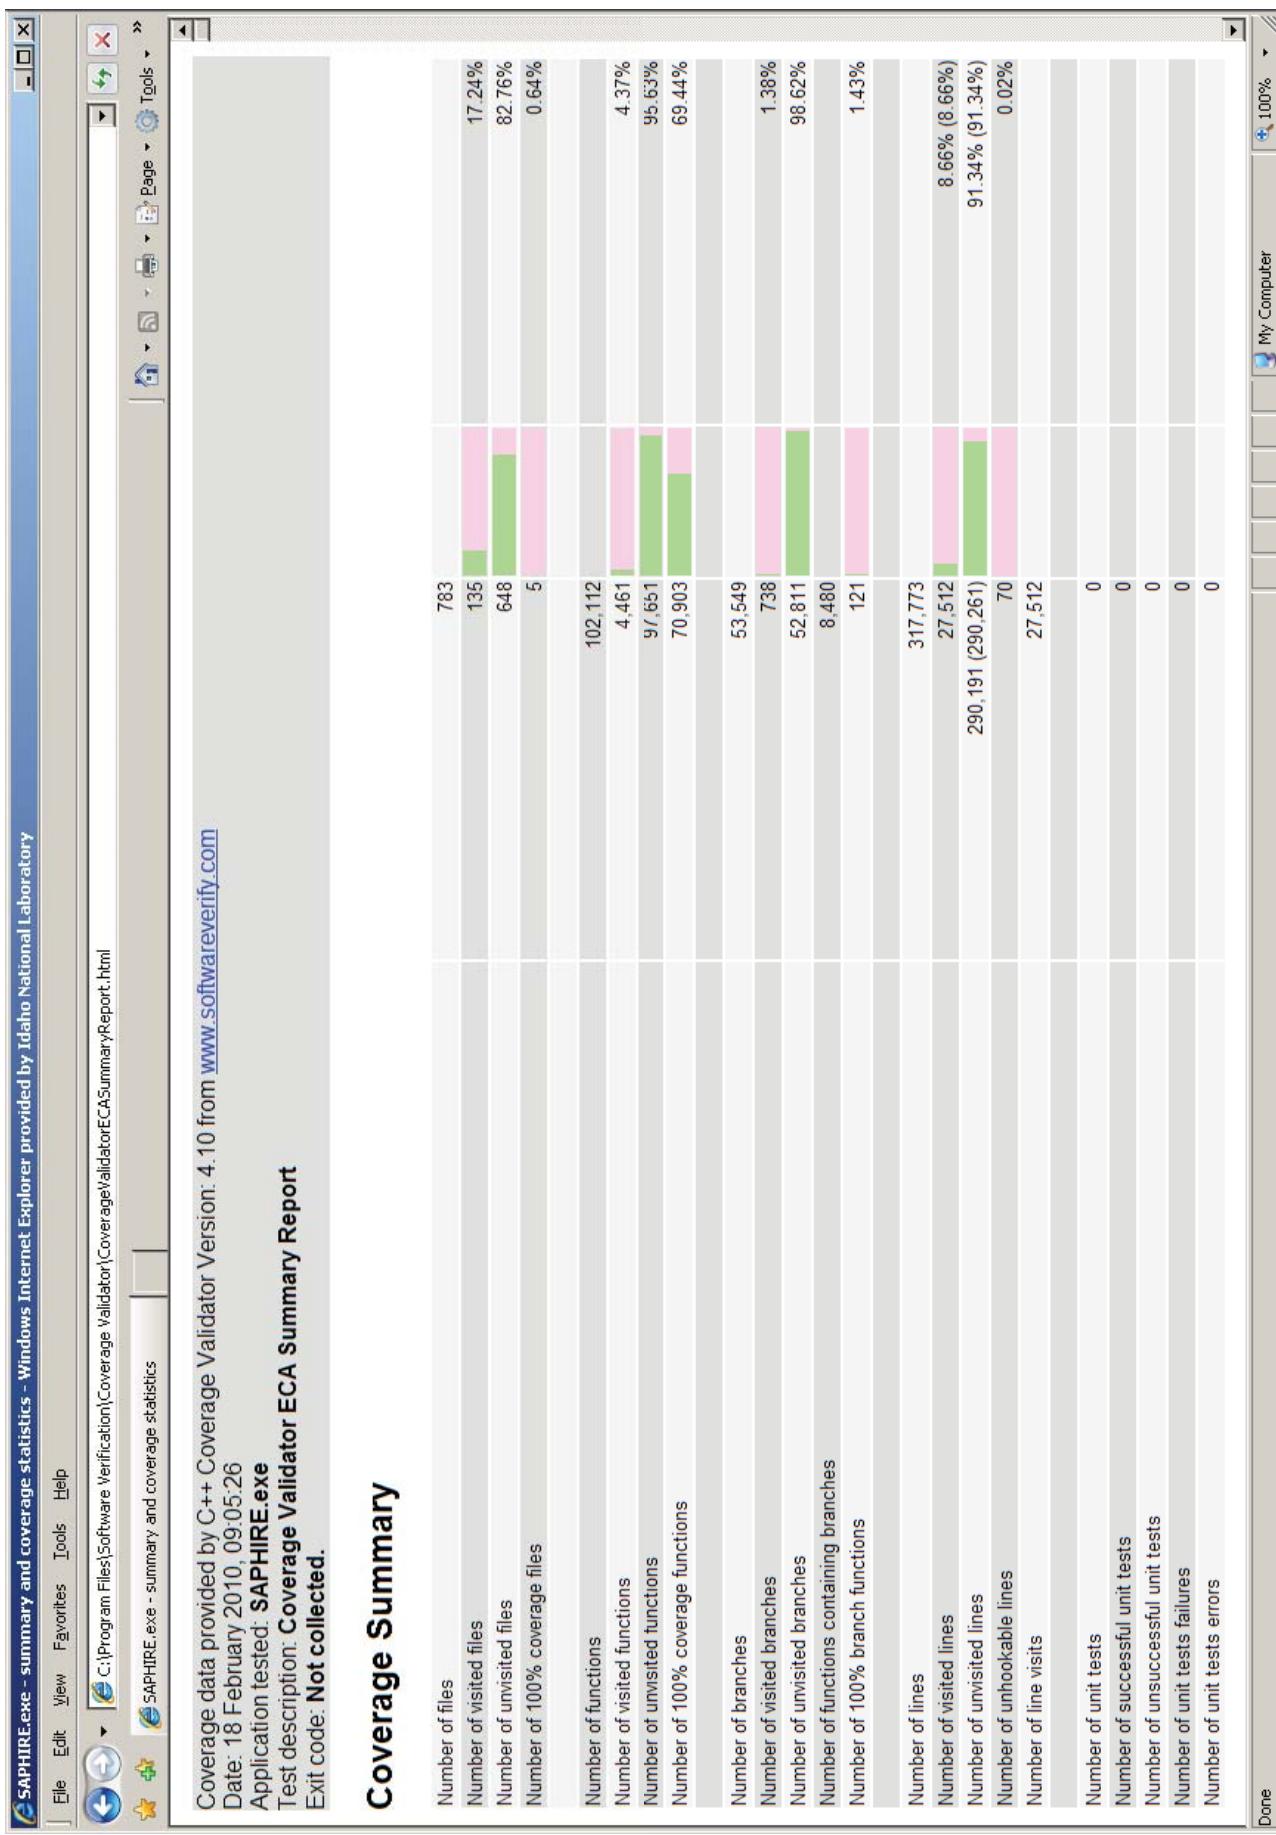

Figure 8-2 Coverage Validator ECA Summary Report

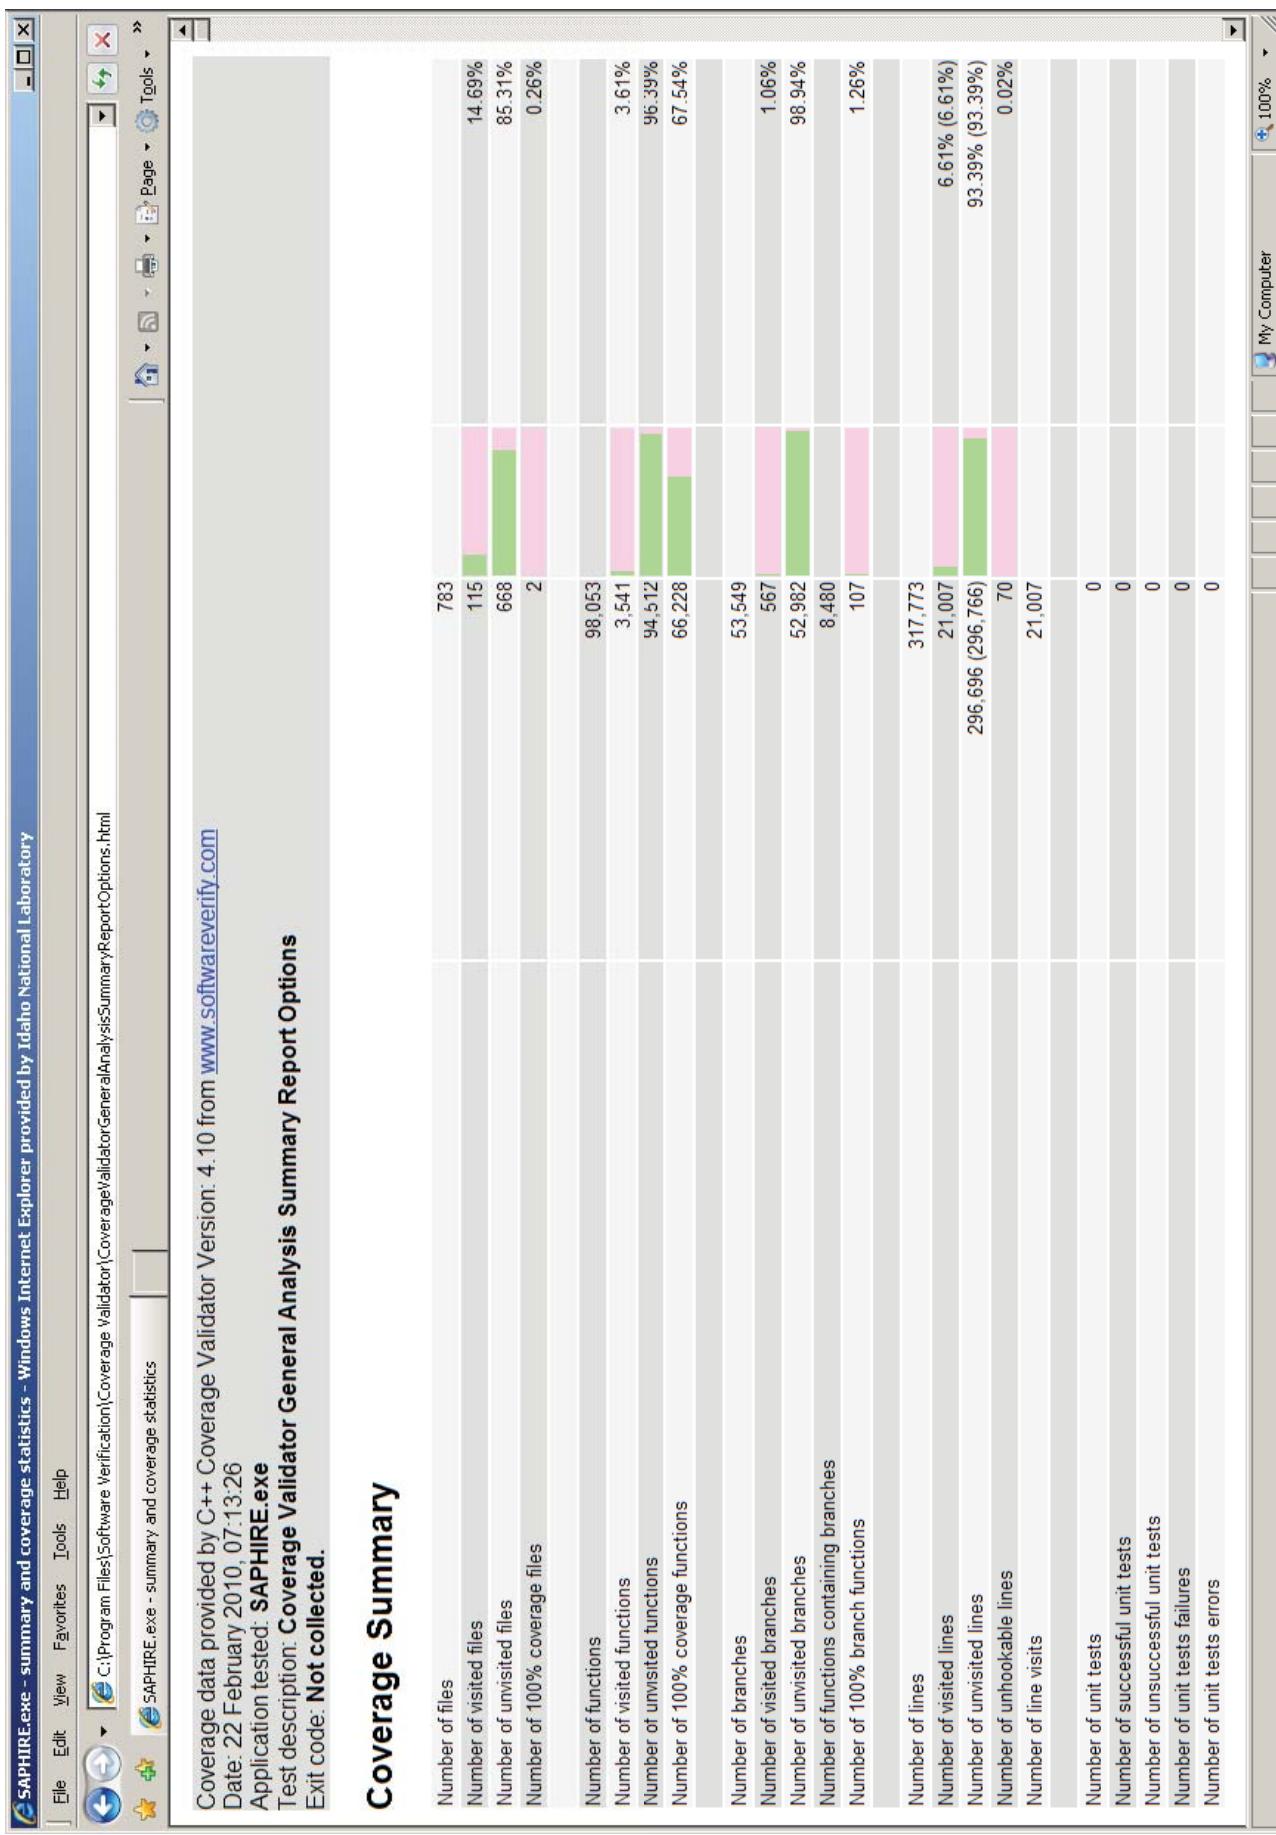

Figure 8-3 Coverage Validator General Analysis Summary Report

Attachment 9: Memory Validator

Figure 8-4 provides the results for memory leak and handle leak detection for the SAPHIRE version 8 source code using the memory and resource leak detector *Memory Validator* © Version 4.86. The option “*Check pointers and handles on DWORD boundaries. Fastest option. This will find less pointers and handles, but also find less FALSE positives*” was selected for the results provided.

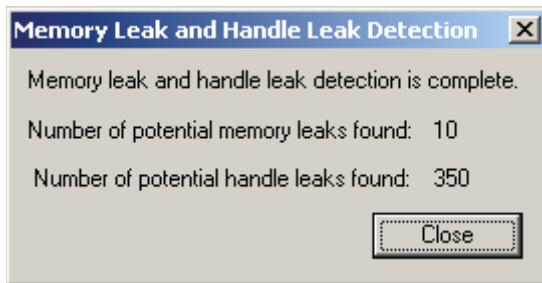

Figure 8-4 Memory Validator Memory Leak and Handle Leak Detection

Figure 8-5 and Figure 8-6 provide partial results of the report of Allocated Memory for a Significance Determination Process analysis. The information reports all memory and resource allocations that have not been deallocated and any information about damaged memory.

Figure 8-7 provides the results of the Virtual Memory report providing a partial textual representation of the memory in the SAPHIRE version 8 program. The textual display shows the allocation state of each memory page in the program as a textual description. The information displayed includes Win32 Heaps, CRT heaps, DLLs, Memory mapped files and thread stacks. For each virtual memory area, the address, size, type and description of the area are displayed.

Figure 8-8 provides the results of the Objects Report that corresponds to the objects tab shown in Figure 8-9. The objects tab displays a visual representation of all the objects in the SAPHIRE version 8 program. Examining the object statistics provides an insight into the number of allocations the SAPHIRE Version 8 software is making and the allocation size frequency of those allocations.

To access the file contents shown in Figure 8-5 and Figure 8-6, refer to file “*MemoryValidatorSDPMemoryDetailed.html*” included on the CD as an addendum to this report. To access the file:

1. Open Internet Explorer.
2. Select “Open” from the “File” menu.
3. The “Open” window will be displayed.
4. Select the “Browse...” button from the “Open” window.
5. The “Windows Internet Explorer” window will be displayed.
6. Navigate to the “*MemoryValidatorSDPMemoryDetailed.html*” file located on the CD.
7. Select the “*MemoryValidatorSDPMemoryDetailed.html*” file on the CD.
8. Select the “Open” button from the “Windows Internet Explorer” window.
9. The “Windows Internet Explorer” window will close.
10. Select the “OK” button from the “Open” window.

To access the file contents shown in Figure 8-7, refer to file “*VirtualMemoryDataExportReport.html*” included on the CD as an addendum to this report. To access the file:

1. Open Internet Explorer.
2. Select “Open” from the “File” menu.
3. The “Open” window will be displayed.
4. Select the “Browse...” button from the “Open” window.
5. The “Windows Internet Explorer” window will be displayed.
6. Navigate to the “*VirtualMemoryDataExportReport.html*” file located on the CD.
7. Select the “*VirtualMemoryDataExportReport.html*” file on the CD.
8. Select the “Open” button from the “Windows Internet Explorer” window.
9. The “Windows Internet Explorer” window will close.
10. Select the “OK” button from the “Open” window.

To access the file contents shown in Figure 8-8, refer to file “*MemoryValidatorDSPObjectsReport.html*” included on the CD as an addendum to this report. To access the file:

1. Open Internet Explorer.
2. Select “Open” from the “File” menu.
3. The “Open” window will be displayed.
4. Select the “Browse...” button from the “Open” window.
5. The “Windows Internet Explorer” window will be displayed.
6. Navigate to the “*MemoryValidatorDSPObjectsReport.html*” file located on the CD.
7. Select the “*MemoryValidatorDSPObjectsReport.html*” file on the CD.
8. Select the “Open” button from the “Windows Internet Explorer” window.
9. The “Windows Internet Explorer” window will close.
10. Select the “OK” button from the “Open” window.

Attachment 10: Performance Validator

Figure 8-10 through Figure 8-15 provides partial results for the performance statistics for the SAPHIRE version 8 source code using the performance analyzer *Performance Validator* © Version 2.63. The performance statistics for a Significance Determination Process analysis (Figure 8-10 and Figure 8-11), Events and Condition Assessment analysis (Figure 8-12 and Figure 8-13) and a General analysis (Figure 8-14 and Figure 8-15) have been provided.

The figures show various performance statistics with percentages where appropriate. The statistics displayed are:

- Number of Children – The number of child functions of a function.
- Address – The function address.
- Class – The class name.
- Method / Function Name – The method/function name.
- File Name – The file name.
- Module Name – The module name.
- Call Count – The number of times the function is called.
- Call Count% - The number of times the function is called.
- Function Time – The time a function takes to execute.
- Function Time% - The time a function takes to execute.
- Total Time – The time a function and its child functions take to execute.
- Total Time% - The time a function and its child functions take to execute.
- Average Time – The average time a function takes to execute.
- Average Time% - The average time a function takes to execute.
- Child Time – The time a function's child functions take to execute.
- Child Time% - The time a function's child functions take to execute.
- Longest Time – The longest time a function and its child functions take to execute.
- Longest Time% - The longest time a function and its child functions take to execute.
- Shortest Time – The shortest time a function and its child functions take to execute.
- Shortest Time% - The shortest time a function and its child functions take to execute.

This report identifies functions and methods that are taking the most time, or which are visited more than other functions.

To access the file contents shown in Figure 8-10 and Figure 8-11, refer to file “*PerformanceValidatorSDPStatisticsReport.html*” included on the CD as an addendum to this report. To access the file:

1. Open Internet Explorer.
2. Select “Open” from the “File” menu.
3. The “Open” window will be displayed.
4. Select the “Browse...” button from the “Open” window.
5. The “Windows Internet Explorer” window will be displayed.
6. Navigate to the “*PerformanceValidatorSDPStatisticsReport.html*” file located on the CD.
7. Select the “*PerformanceValidatorSDPStatisticsReport.html*” file on the CD.
8. Select the “Open” button from the “Windows Internet Explorer” window.
9. The “Windows Internet Explorer” window will close.
10. Select the “OK” button from the “Open” window.

To access the file contents shown in Figure 8-12 and Figure 8-13, refer to file “*PerformanceValidatorECAStatisticsReport.html*” included on the CD as an addendum to this report. To access the file:

1. Open Internet Explorer.
2. Select “Open” from the “File” menu.
3. The “Open” window will be displayed.
4. Select the “Browse...” button from the “Open” window.
5. The “Windows Internet Explorer” window will be displayed.
6. Navigate to the “*PerformanceValidatorECAStatisticsReport.html*” file located on the CD.
7. Select the “*PerformanceValidatorECAStatisticsReport.html*” file on the CD.
8. Select the “Open” button from the “Windows Internet Explorer” window.
9. The “Windows Internet Explorer” window will close.
10. Select the “OK” button from the “Open” window.

To access the file contents shown in Figure 8-14 and Figure 8-15, refer to file “*PerformanceValidatorGeneralAnalysisStatisticsReportOptions.html*” included on the CD as an addendum to this report. To access the file:

1. Open Internet Explorer.
2. Select “Open” from the “File” menu.
3. The “Open” window will be displayed.
4. Select the “Browse...” button from the “Open” window.
5. The “Windows Internet Explorer” window will be displayed.
6. Navigate to the “*PerformanceValidatorGeneralAnalysisStatisticsReportOptions.html*” file located on the CD.
7. Select the “*PerformanceValidatorGeneralAnalysisStatisticsReportOptions.html*” file on the CD.
8. Select the “Open” button from the “Windows Internet Explorer” window.
9. The “Windows Internet Explorer” window will close.
10. Select the “OK” button from the “Open” window.

Figure 8-15 Performance Validator General Analysis Statistics Report - Right

Attachment 11: Thread Validator

Figure 8-17, Figure 8-18 and Figure 8-19 provides the deadlocks, potential deadlocks, bad lock strategies, and deadlock postmortem analysis for the SAPPHIRE version 8 source code using the deadlock detector *Thread Validator* Version 1.52. The partial results of deadlocks, potential deadlocks, bad lock strategies, and deadlock postmortem analysis for a Significance Determination Process analysis (Figure 8-17), Events and Condition Assessment analysis (Figure 8-18) and a General analysis (Figure 8-19) have been provided. Figure 8-16 provides the color code definitions for the memory and resource allocations that have not been deallocated and any information about damaged memory presented in Figure 8-17 through Figure 8-19.

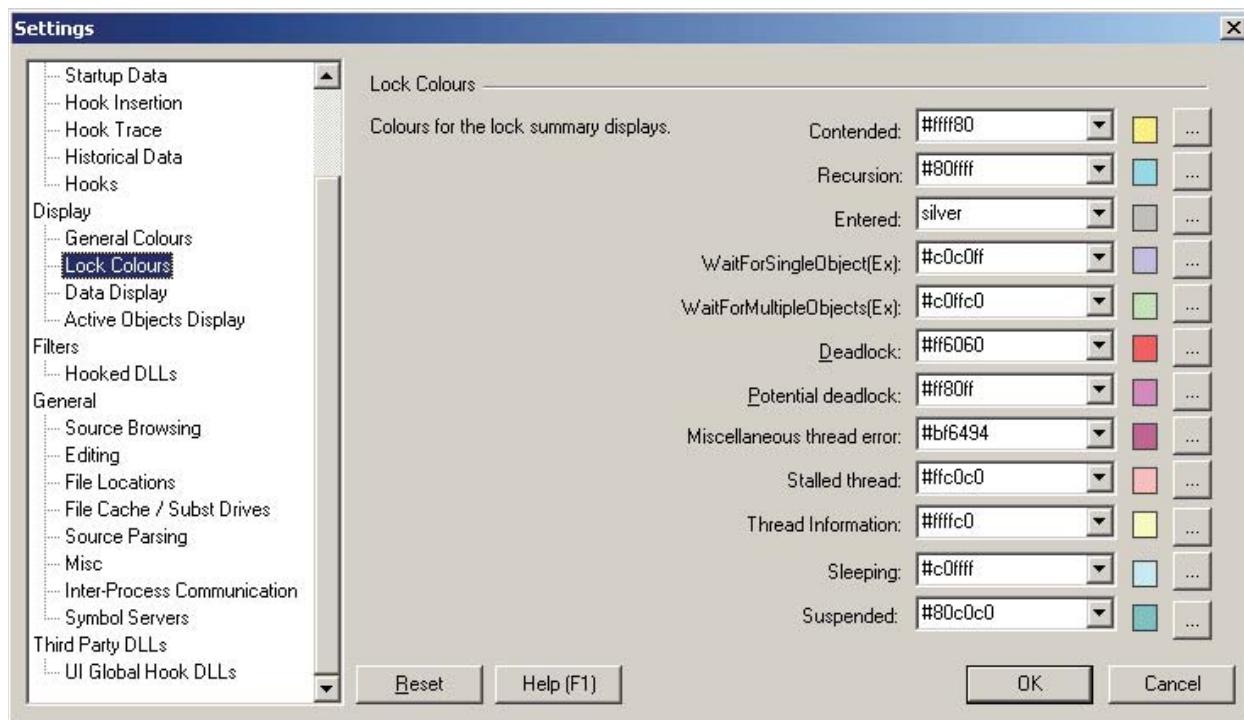

Figure 8-16 Thread Validator Lock Colors Definitions

Figure 8-17 through Figure 8-19 provide the following information about all memory and resource allocations that have not been deallocated and any information about damaged memory:

- The first column provides the Critical Section Address.
- The second column provides the Entered Count.
- The third column provides the Recursion Count, the number of times the critical section has been re-entered while locked by the current thread.
- The fourth column provides the Contended Count, the number of times that a thread has tried to acquire the critical section but has had to wait because another thread already owns the critical section.
- The fifth column provides the Number of Waiting Processor Cycles.
- The sixth column provides the Thread Id.
- The seventh column provides the Number of Waiting Threads.
- The eighth column provides the Location Where the Object Was Allocated, Locked or Waiting.

To access the file contents shown in Figure 8-17, refer to file “*ThreadValidatorSDPReport.html*” included on the CD as an addendum to this report. To access the file:

1. Open Internet Explorer.
2. Select “Open” from the “File” menu.
3. The “Open” window will be displayed.
4. Select the “Browse...” button from the “Open” window.
5. The “Windows Internet Explorer” window will be displayed.
6. Navigate to the “*ThreadValidatorSDPReport.html*” file located on the CD.
7. Select the “*ThreadValidatorSDPReport.html ml*” file on the CD.
8. Select the “Open” button from the “Windows Internet Explorer” window.
9. The “Windows Internet Explorer” window will close.
10. Select the “OK” button from the “Open” window.

To access the file contents shown in Figure 8-18, refer to file “*ThreadValidatorECAReport.html*” included on the CD as an addendum to this report. To access the file:

1. Open Internet Explorer.
2. Select “Open” from the “File” menu.
3. The “Open” window will be displayed.
4. Select the “Browse...” button from the “Open” window.
5. The “Windows Internet Explorer” window will be displayed.
6. Navigate to the “*ThreadValidatorECAReport.html*” file located on the CD.
7. Select the “*ThreadValidatorECAReport.html ml*” file on the CD.
8. Select the “Open” button from the “Windows Internet Explorer” window.
9. The “Windows Internet Explorer” window will close.
10. Select the “OK” button from the “Open” window.

To access the file contents shown in Figure 8-19, refer to file “*ThreadValidatorGeneralAnalysisReport.html*” included on the CD as an addendum to this report. To access the file:

1. Open Internet Explorer.
2. Select “Open” from the “File” menu.
3. The “Open” window will be displayed.
4. Select the “Browse...” button from the “Open” window.
5. The “Windows Internet Explorer” window will be displayed.
6. Navigate to the “*ThreadValidatorGeneralAnalysisReport.html*” file located on the CD.
7. Select the “*ThreadValidatorGeneralAnalysisReport.html ml*” file on the CD.
8. Select the “Open” button from the “Windows Internet Explorer” window.
9. The “Windows Internet Explorer” window will close.
10. Select the “OK” button from the “Open” window.

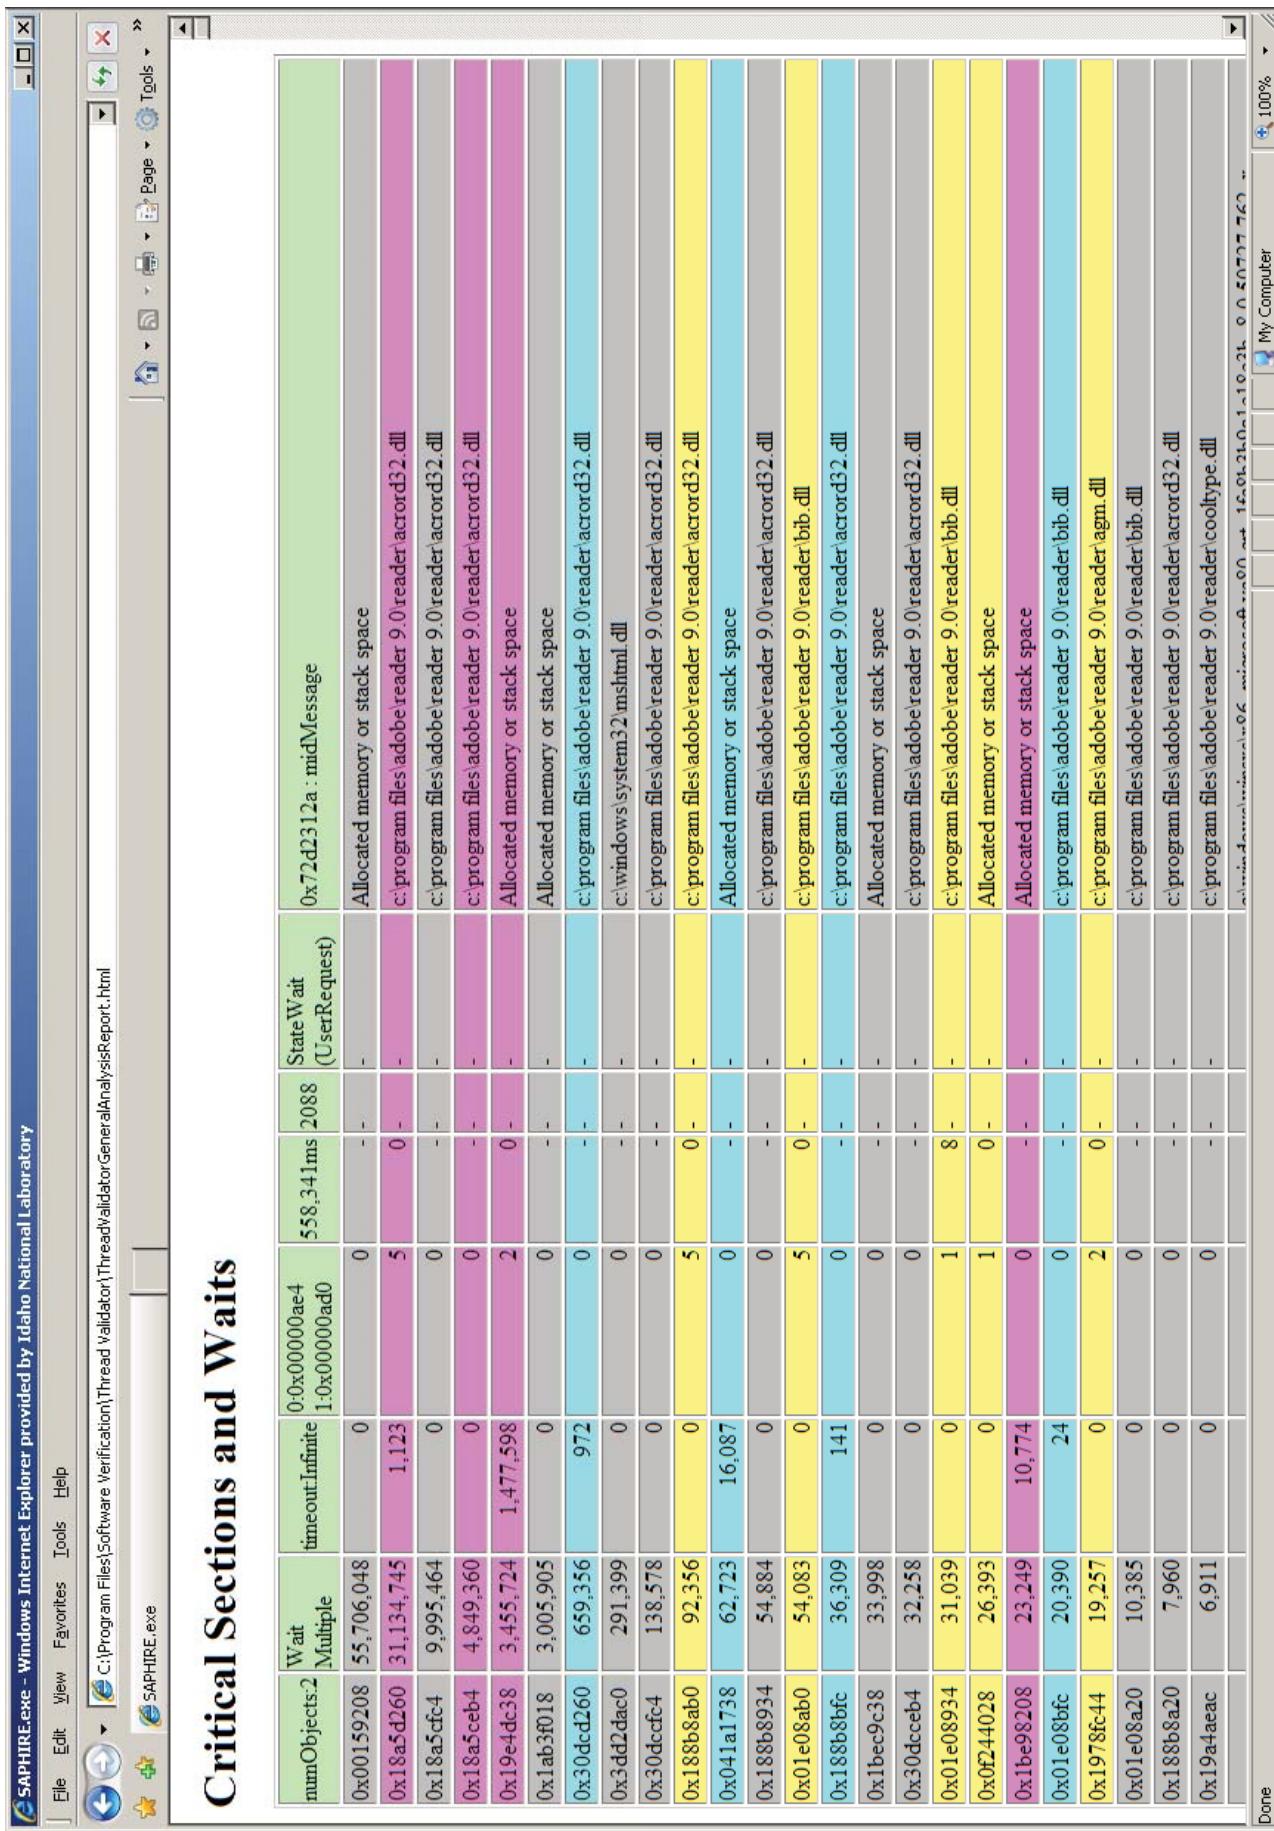

Figure 8-19 Thread Validator General Analysis Critical Sections and Waits Report

Attachment 12: IV&V Acceptance Test Results

Independent Verificaiton and Validation Acceptance Testing were performed using the Automated Test Suite as described in the Software Acceptance Test Plan for SAPHIRE Version 8 (INL/EXT-09-16236) and the SAPHIRE Version 8 Software Verification and Validation Plan Volume II (INL/EXT-05-00821). The results for each individual test case identifier are presented in Table 12-1 Independent Verification and Validation Test Results.

Expected results for 2qa tests:

- Byron Initiating Event Analysis
- Peach Bottom Initiating Event Analysis
- Dresden Initiating Event Analysis
- Grand Gulf Initiating Event Analysis
- Millstone 3 Initiating Event Analysis
- Oconee Initiating Event Analysis
- Oyster Creek Initiating Event Analysis
- San Onofre Initiating Event Assessment
- St. Lucie 1 Initiating Event Assessment
- Surry 2qa Initiating Event Assessment

Using test cases:

- Test-08
- Test-09
- Test-10
- Test-11

are expected failures (“Fail”).

Expected results for test Simple Fault Tree – Testing Compound Events etc. is expected to fail (“Fail”). Visual inspection of the results generated against expected results verifies that the results generated are within the values of the expected results.

Expected results for test DEMO – Testing For Incorrect Comparison is expected to fail (“Fail”).

Expected results for all other test are successful completion (“Pass”).

The results are provided for the following test case identifiers as documented in the individual macro files:

Test-01	Solve Fault Trees. Fault Tree Probability Results. Fault Tree Probability Results: DG Failed Condition Assessment Of 100 Hours (unit = default). Fault Tree Probability Results: The LPI MDP Train A Was Failed During The Grid LOOP (units = year).
Test-02	Solve Sequences. Core Damage Frequency Results. Solve Sequence Cut Sets.

	Core Damage Frequency Results: The LPI MDP Train A Was Failed During The Grid LOOP (units = hour).
Test-03	<p>Events and Conditions Assessment: AFW Out Of Service For 72 Hours.</p> <p>Events and Conditions Assessment: HPCI Out Of Service For 72 Hours.</p> <p>Events and Conditions Assessment: HPCS Out Of Service For 72 Hours.</p> <p>Events and Conditions Assessment: EFW Out Of Service For 72 Hours.</p> <p>Events and Conditions Assessment: MFW Out Of Service For 72 Hours.</p>
Test-04	<p>Events and Conditions Assessment: Emergency Diesel Generator Out Of Service For 3 Months.</p> <p>Events and Conditions Assessment: DG Failed Condition Assessment Of 100 Hours (unit = hours).</p> <p>Events and Conditions Assessment: 3TC Out Of Service For 3 Months.</p>
Test-05	Initiating Event Assessment: Transient Initiator With No Other Failures.
Test-06	<p>Initiating Event Assessment: Small LOCA Initiator With No Other Failures.</p> <p>Initiating Event Assessment: Small LOCA Initiator With HSW-PUMPA Fails To Start.</p> <p>Initiating Event Assessment: Small LOCA Initiator With HPI-PUMPA In T&M And CVC-PUMPA Fails To Start.</p>
Test-07	Initiating Event Assessment: Steam Generator Initiator With No Other Failures.
Test-08	Initiating Event Assessment: Grid-Related LOOP Initiator With No Other Failures.
Test-09	Initiating Event Assessment: Plant-Centered LOOP Initiator With No Other Failures.
Test-10	Initiating Event Assessment: Severe Weather LOOP Initiator With No Other Failures.
Test-11	Initiating Event Assessment: Extreme Severe Weather LOOP Initiator With No Other Failures.
Test-12	<p>Initiating Event Assessment: Transient Initiator With AFW Failed.</p> <p>Initiating Event Assessment: Transient Initiator With HPCI Failed.</p> <p>Initiating Event Assessment: Transient Initiator With HPCS Failed.</p> <p>Initiating Event Assessment: Transient Initiator With EFW Failed.</p> <p>Initiating Event Assessment: Transient Initiator With MFW Failed.</p>
Test-13	Project Uncertainty.
Test-14	Fault Tree Uncertainty: Log Normal Distribution Using MCS.
Test-15	Fault Tree Uncertainty: Normal Distribution.
Test-16	Fault Tree Uncertainty: Beta Distribution.
Test-17	Fault Tree Uncertainty: Chi Squared Distribution.
Test-18	Fault Tree Uncertainty: Exponential Distribution.
Test-19	Fault Tree Uncertainty: Uniform Distribution.
Test-20	Fault Tree Uncertainty: Gamma Distribution.
Test-21	Fault Tree Uncertainty: Maximum Entropy Distribution.
Test-22	Sequence Uncertainty: Dirichlet Distribution Using Monte Carlo Simulation.
Test-23	Fault Tree Uncertainty: Seismic Log Normal Distribution.
Test-24	Fault Tree Uncertainty: Constrained Noninformative Distribution.
Test-25	Fault Tree Uncertainty: Log Normal Distribution Using LHS.
Test-26	Fault Tree Uncertainty: Normal Distribution.
Test-27	Fault Tree Uncertainty: Beta Distribution.
Test-28	Fault Tree Uncertainty: Chi Squared Distribution.
Test-29	Fault Tree Uncertainty: Exponential Distribution.
Test-30	Fault Tree Uncertainty: Uniform Distribution.
Test-31	Fault Tree Uncertainty: Gamma Distribution.

Test-32	Sequence Uncertainty: Maximum Entropy Distribution.
Test-33	Sequence Uncertainty: Latin Hypercube Method/Dirichlet Distribution.
Test-34	Fault Tree Uncertainty: Seismic Log Normal Distribution.
Test-35	Fault Tree and Sequence Uncertainty: Constrained Noninformative Distribution.
Test-36	Fault Tree Uncertainty: Histogram Distribution.
Test-37	Fault Tree Uncertainty: Histogram Distribution.
Test-38	Gathering Of End States.
Test-39	End State Single Uncertainty: Monte Carlo Method.
Test-40	End State Single Uncertainty: Latin Hypercube Method.
Test-41	Cut Set Verification: Solve Selected Fault Trees.
	Cut Set Verification: Sequences and End States.
	Cut Set Verification: Solve Fault Trees.
Test-42	Link Small Event Tree: Link Level 1 Event Trees (small event trees).
	Link Small Event Tree: Link Event Trees (small event trees).
Test-43	Partition Sequence Cut Sets.
Test-44	Link Large Event Tree: Link PDS Event Trees (large event trees).
Test-45	Fault Tree Importance Measures: Fault Tree Fussell-Vesely Importance (ratio).
	Fault Tree Importance Measures: Fault Tree Birnbaum Importance (interval or difference).
	Fault Tree Importance Measures: Fault Tree Uncertainty Importance.
Test-46	Sequence Importance Measures: Sequence Fussell-Vesely Importance (ratio).
	Sequence Importance Measures: Fault Tree Birnbaum Importance (interval or difference).
	Sequence Importance Measures: Sequence Uncertainty Importance.
Test-47	Sequence Group Importance Measures.
	Sequence Group Importance Measures: Sequence Group Fussell-Vesely Importance (ratio).
	Sequence Group Importance Measures: Sequence Group Birnbaum Importance (interval or difference).
	Sequence Group Importance Measures: Sequence Group Uncertainty Importance.
Test-48	End State Importance Measures: End State Fussell-Vesely Importance.
	End State Importance Measures: End State Birnbaum Importance.
	End State Importance Measures: End State Uncertainty Importance.
Test-49	End State Group Importance: End State Fussell-Vesely Group Importance.
	End State Group Importance: End State Birnbaum Importance.
	End State Group Importance: End State Uncertainty Group Importance.
Test-50	Change Set Processing: Single.
	Change Set Processing: Single Change – LPR-MOV-FT-1862A Event.
	Change Set Processing: Single Change – E-MOV-A Event.
	Change Set Processing: Change Set On Compound Event.
	Change Set Processing: Single Change Set On Compound Event.
Test-51	Change Set Processing: Class
	Change Set Processing: Class Change – All Events.
	Change Set Processing: Class Change – LPR-MOV-FT* Events.
	Change Set Processing: Class Change - ?-MOV-1 Events.
Test-52	Change Set Processing: Marked Order
	Change Set Processing: Marked Change Sets From Scenarios 1, 2, 3 (marked in that order).
Test-53	Extract, Delete, Load, Solve: Basic Events Load/Extract .
	Extract, Delete, Load, Solve: Fault Tree Load/Extract.
Test-54	Fault Tree Utility Functions: Auto Page/Solve.

	Fault Tree Utility Functions: Cut Sets To End State.
Test-55	Event Tree Linkage (including rules).
Test-56	End-State Gathering.
Test-57	Compound Event Plug-ins.
Test-58	Base Case Update.
Test-59	Calculation Types.
Test-60	Application of Change Sets.
Test-61	Uncertainty Distributions.
Test-62	N of M Gates.
Test-63	Sequence Stress Testing.
Test-64	Calculations on the Common-Cause Plug-in.
Test-65	Event Transformations. (<i>No Test Being Run.</i>)
Test-66	Wrong Results.
Test-67	Event And Condition Analysis-Initiating Event Assessment: Switchyard-Related Loss Of Off-Site Power (LOOP) With Other Failures And Conditions On The Oyster Creek 345 Model, Switchyard LOOP. Event And Condition Analysis-Initiating Event Assessment: Switchyard-Related Loss Of Off-Site Power (LOOP) With Other Failures And Conditions On The Oyster Creek 345 Model, Switchyard LOOP With TM Off.
Test-68	Event And Condition Analysis- Condition Event Assessment: Blue Max SBO Diesel Out For Four Days On The Susquehanna Unit 1 And 2 Model, EDG Out For 4 Days, Multipass Option. Event And Condition Analysis- Condition Event Assessment: Blue Max SBO Diesel Out For Four Days On The Susquehanna Unit 1 And 2 Model, EDG Out For 4 Days, Single Pass WITHOUT Cut Set Update Option. Event And Condition Analysis- Condition Event Assessment: Blue Max SBO Diesel Out For Four Days On The Susquehanna Unit 1 And 2 Model, EDG Out For 4 Days, Single Pass WITH Cut Set Update Option. Event And Condition Analysis- Condition Event Assessment: Blue Max SBO Diesel Out For Four Days On The Susquehanna Unit 1 And 2 Model, ECA Cond TM Effect On CCF. Event And Condition Analysis-Condition Event Assessment: Blue Max SBO Diesel Out For Four Days On The Susquehanna Unit 1 And 2 Model, EDG Out For 4 Days, Multipass Option. Event And Condition Analysis- Condition Event Assessment: Blue Max SBO Diesel Out For Four Days On The Susquehanna Unit 1 And 2 Model, EDG Out For 4 Days, Single Pass WITHOUT Cut Set Update Option. Event And Condition Analysis- Condition Event Assessment: Blue Max SBO Diesel Out For Four Days On The Susquehanna Unit 1 And 2 Model, EDG Out For 4 Days, Single Pass WITH Cut Set Update Option. Event And Condition Analysis- Condition Event Assessment: Blue Max SBO Diesel Out For Four Days On The Susquehanna Unit 1 And 2 Model, EDG Out For TM For 4 Days, Multipass Option With TM Turned Off.
Test-69	Significance Determination Process-Blue Max SBO Diesel Out For Four Days On The Susquehanna Unit 1 And 2 Model, EDG Failed To Run For 4 Days, Multiple Pass Option. Significance Determination Process-Blue Max SBO Diesel Out For Four Days On The Susquehanna Unit 1 And 2 Model, EDG Failed To Run For 4 Days, Single Pass WITHOUT cut Set Update.

	Significance Determination Process-Blue Max SBO Diesel Out For Four Days On The Susquehanna Unit 1 And 2 Model, EDG Failed To Run For 4 Days, Single Pass WITH cut Set Update.
Test-70	<p>General Analysis-Blue Max SBO Diesel Out For Four Days On The Susquehanna Unit 1 and 2 Model. EDG Failed To Run For 4 Days, Multiple Pass Option.</p> <p>General Analysis-Blue Max SBO Diesel Out For Four Days On The Susquehanna Unit 1 and 2 Model. EDG Failed To Run For 4 Days, Single Pass WITHOUT Cut Set Update.</p> <p>General Analysis-Blue Max SBO Diesel Out For Four Days On The Susquehanna Unit 1 and 2 Model. EDG Failed To Run For 4 Days, Single Pass WITH Cut Set Update.</p> <p>General Analysis-Blue Max SBO Diesel Out For Four Days On The Susquehanna Unit 1 And 2 model. ECA Cond TM Effect On CCF.</p>
Test-71	‘N’ Calculation Type. Verify Initiating Event Type’N’.
Test-72	‘N’ Calculation Type. Solve Sequences, Core Damage Frequency Results RASP Common Cause Failure (CCF) Validation.
Test-73	External Event Models – Solve Event Trees. Solve Sequences, Core Damage Frequency Results.
Test-74	Shutdown Models – Solve Event Trees. Solve Sequences, Core Damage Frequency Results.
Test-75	<p>Workspace Model Independence. Sovle Fault Trees.</p> <p>Workspace Model Independence. Core Damage Frequency Test.</p> <p>Workspace Model Independence. Report BE Data.</p> <p>Workspace Model Independence. ECA-IE-LOOP-SC.</p> <p>Workspace Model Independence. Switch Yard LOOP.</p> <p>Workspace Model Independence. ECA Cond EDG-FR 4 Days Multiple Pass.</p> <p>Workspace Model Independence. EDG FR For 4 Days.</p> <p>Workspace Model Independence. Fault Tree Same Frequency Test.</p> <p>Workspace Model Independence. Sequence Same Frequency Test.</p> <p>Workspace Model Independence. Report BE Data.</p>
Test-76	<p>Repetition Of Critical Calculations Over N Times. SA Solve Fault Trees, Fault Tree Probability Results.</p> <p>Repetition Of Critical Calculations Over N Times. SA Sovle Sequences, Core Damage Frequency Results.</p> <p>Repetition Of Critical Calculations Over N Times. ECA.</p> <p>Repetition Of Critical Calculations Over N Times. GA.</p> <p>Repetition Of Critical Calculations Over N Times. SDP.</p>
Test-77	Significance Determination Process – LERF Multiplier Calculations (Manual Test).
Test-78	Accident Sequence Matrix – Solve Event Trees (Manual Test).
Test-79	Multiple Pass Algorithm Test (TRUE and 1.0).
Test-80	Multiple Pass Algorithm Test (False and Ignore), EDG Out For 4 Days, Multipass Option.
Test-81	<p>Min-Max Test On Demo-EE Model For Event And Condition Analysis And General Analysis Interfaces. Core Damage Frequency And Report.</p> <p>Min-Max Test On Demo-EE Model For Event And Condition Analysis And General Analysis Interfaces. Report BE Data.</p> <p>Min-Max Test On Demo-EE Model For Event And Condition Analysis And General Analysis Interfaces. ECA-IE-LOOP-SC.</p> <p>Min-Max Test On Demo-EE Model For Event And Condition Analysis And General Analysis Interfaces. Switch Yard LOOP.</p>

	<p>Min-Max Test On Demo-EE Model For Event And Condition Analysis And General Analysis Interfaces. ECA Cond EDG-FR 4 Days Multiple Pass.</p> <p>Min-Max Test On Demo-EE Model For Event And Condition Analysis And General Analysis Interfaces. EDG Fr For 4 Days.</p> <p>Min-Max Test On Demo-EE Model For Event And Condition Analysis And General Analysis Interfaces.SDP EDG-FR 4 Days Multiple Pass.</p> <p>Min-Max Test On Demo-EE Model For Event And Condition Analysis And General Analysis Interfaces. GEN EDG-FR 4 Days Multiple Pass.</p> <p>Min-Max Test On Demo-EE Model For Event And Condition Analysis And General Analysis Interfaces. Report And Compare Fault Tree Data.</p> <p>Min-Max Test On Demo-EE Model For Event And Condition Analysis And General Analysis Interfaces. EDG FR For 4 Days.</p> <p>Min-Max Test On Demo-EE Model For Event And Condition Analysis And General Analysis Interfaces. Report And Compare Fault Tree Data.</p> <p>Min-Max Test On Demo-EE Model For Event And Condition Analysis And General Analysis Interfaces. Report And Compare CDF Data.</p> <p>Min-Max Test On Demo-EE Model For Event And Condition Analysis And General Analysis Interfaces. Report And Compare BE Data.</p>
Test-82	<p>Single Pass Algorithm Tests On Event And Condition Analysis And General Analysis: LCS-MDP-FS-P3A Failed For 1 Year (no update), Failed Event Contributors To CCF.</p> <p>Single Pass Algorithm Tests On Event And Condition Analysis And General Analysis: LCS-MDP-FS-P3A Failed For 1 Year (yes update), Failed Event Contributors To CCF.</p>
Test-83	Cross-Referencing Is Validated (Manual Test).
Test-84	<p>Verify Database Recovery Works. Solve And Report Fault Trees.</p> <p>Verify Database Recovery Works. Core Damage Frequency And Report.</p> <p>Verify Database Recovery Works. Report BE Data.</p>
Test-85	Verify Event Tree/Fault Tree Transfers Function Correctly (Manual Test).
Test-86	Gather End States On A Demo Model With Multiple Phases.
Test-87	Large Early Release Frequency (LERF) Model Functionality.
Test-88	Event Tree, Fault Tree Creation In A New Project.
Test-89	Menu Navigation (Manual Test).
Test-90	Tree View Expanded (Manual Test).
Test-91	<p>Workspace To Standard Analysis Interface Independence. Solve And Report Fault Trees.</p> <p>Workspace To Standard Analysis Interface Independence. Core Damage Frequency And Report.</p> <p>Workspace To Standard Analysis Interface Independence. Report BE Data.</p> <p>Workspace To Standard Analysis Interface Independence. ECA-IE-LOOP-SC.</p> <p>Workspace To Standard Analysis Interface Independence. ECA Cond EDG-FR 4 Days Multiple Pass.</p> <p>Workspace To Standard Analysis Interface Independence. EDG FR For 4 Days.</p> <p>Workspace To Standard Analysis Interface Independence. SDP EDG-FR 4 Days Multiple Pass.</p> <p>Workspace To Standard Analysis Interface Independence. Report And Compare CDF Data.</p>

	Workspace To Standard Analysis Interface Independence. Report And Compare BE Data.
Test-92	Standard Analysis Interface To Workspace Independence.
Test-93	Workspace To Workspace Independence (Manual Test).
Test-94	Project To Project Independence (Manual Test).
Test-95	Workspace To Workspace Independence.
Test-96	Integrated Models.
Test-97	Event Tree Linking And Unlink In Integrated Models (External Events and Shutdown) (Manual Test).
Test-98	Verification Of Cut Set View Path (Manual Test).
Test-99	Verification Rule Layering Works.
Test-100	Verification Rule Nesting Works.
Test-101	All Reports Produce Expected Reports.
Test-102	Significance Determination Process Interface Testing Of Basic Event Changes (Manual Test).
Test-103	Significance Determination Process Interface Testing Of Figure III-D (Change in delta CDF as a function of duration) Point Estimate Checks (Manual Test).
Test-104	Event And Condition Analysis Uncertainty Calculations (Manual Test).
Test-105	SPAR-H Worksheet Calculations. Compares Basic Events Of X Calc Type.

A summary of the Independent Verification and Validation Acceptance Testing results using the Automated Test Suite script file “runplant.bat” is presented in Figure 12-1 SAPHIRE Tests 01-66 Summary Report.

The detail of the individual results of the Independent Verification and Validation Acceptance Testing using the Automated Test Suite script file “runplant.bat” is included on the CD as an addendum to this report. Refer to the test file “*IVV01-66Detail-2010-04-26*”.

A summary of the Independent Verification and Validation Acceptance Testing results using the Automated Test Suite Script file “runplant8.bat” is presented in Figure 12-2 SAPHIRE Tests 67-105 Summary Report.

The detail of the individual results of the Independent Verification and Validation Acceptance Testing using the Automated Test Suite script file “runplant8.bat” is included on the CD as an addendum to this report. Refer to the test file “*IVV67-105Detail-2010-04-26*”.

Manual testing was used to augment the automated test suite for Test Cases: Test-77, Test-78, Test-83, Test-85, Test-89, Test-90, Test-93, Test-94, Test-97, Test-98, Test-102, Test-103 and Test-104. Refer to Appendix A – Manual Test Results.

Figure 12-2 SAPHIRE Tests 67-105 Summary Report

Table 12-1 Independent Verification and Validation Acceptance Test Results

Test Description	Project Short Name	Test Case ID(s)	Expected Results	Independent Verification and Validation Results
Byron Core Damage Frequency Analysis	byrn_2qa	Test-01 – Solve Fault Trees, Fault Tree Probability Results. Test-02 – Solve Sequences, Core Damage Frequency Results.	Pass	Pass
Byron Condition Assessment Analysis	byrn_2qa	Test-58 – Base Case Update. Test-03 – Events and Conditions Assessment: AFW Out Of Service For 72 Hours. Test-04 – Events and Condition Assessment: Emergency Diesel Generator Out of Service For 3 Months.	Pass	Pass
Byron Initiating Event Analysis	byrn_2qa	Test-05 – Initiating Event Assessment: Transient Initiator With No Other Failures. Test-06 – Initiating Event Assessment: Small LOCA Initiator With No Other Failures. Test-07 – Initiating Event Assessment: Steam Generator Initiator With No Other Failures.	Pass	Pass
		Test-12 – Initiating Event Assessment: Transient Initiator With AFW Failed. Test-08 – Initiating Event Assessment: Grid-Related LOOP Initiator With No Other Failures. Test-09 – Initiating Event Assessment: Plant-Centered LOOP Initiator With No Other Failures.	Pass	Pass
		Test-10 – Initiating Event Assessment: Severe Weather LOOP Initiator With No Other Failures. Test-11 – Initiating Event Assessment: Extreme Severe Weather LOOP Initiator With No Other Failures.	Fail	Fail
Peach Bottom Core Damage Frequency Analysis	pbot_2qa	Test-01 – Solve Fault Trees, Fault Tree Probability Results. Test-02 – Solve Sequences, Core Damage Frequency Results.	Pass	Pass
Peach Bottom Condition Assessment Analysis	pbot_2qa	Test-58 – Base Case Update. Test-03 – Events and Conditions Assessment: HPCI Out Of Service For 72 hours. Test-04 – Events and Condition Assessment: Emergency Diesel Generator Out Of Service for 3 Months.	Pass	Pass
Peach Bottom Initiating Event Analysis	pbot_2qa	Test-05 – Initiating Event Assessment: Transient Initiator With No Other Failures. Test-06 – Initiating Event Assessment: Small LOCA Initiator With No Other Failures.	Pass	Pass

APPENDIX A – Manual Test Results

1.0 Test-77

SAPHIRE 8 Testing

Manual Testing to Augment the Automated Test Suite

April 26, 2010

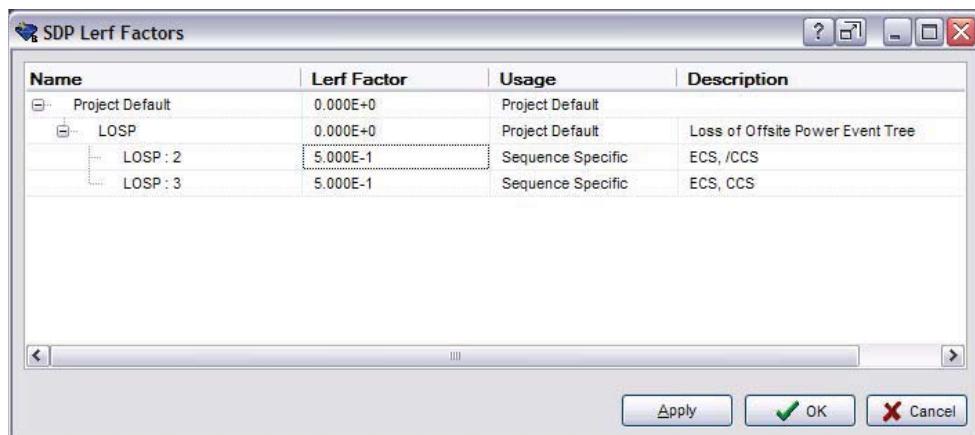

Tester: Curtis Smith

Version: 8.06.06

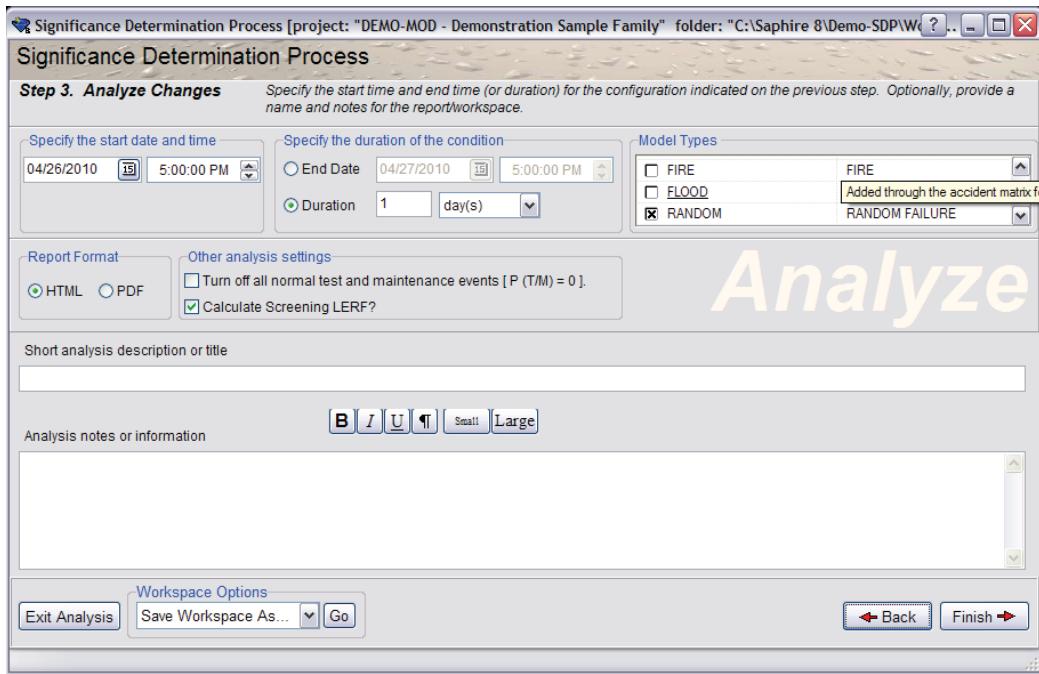

Test 77	Significance Determination Process - LERF multiplier calculations	This test ensures that Significance Determination Process - LERF multipliers are being used properly to calculate Screening LERF values. Results will be compared with results reviewed from a version 7 analysis done by a SPAR model developer at the INL.
----------------	--	--

Steps:

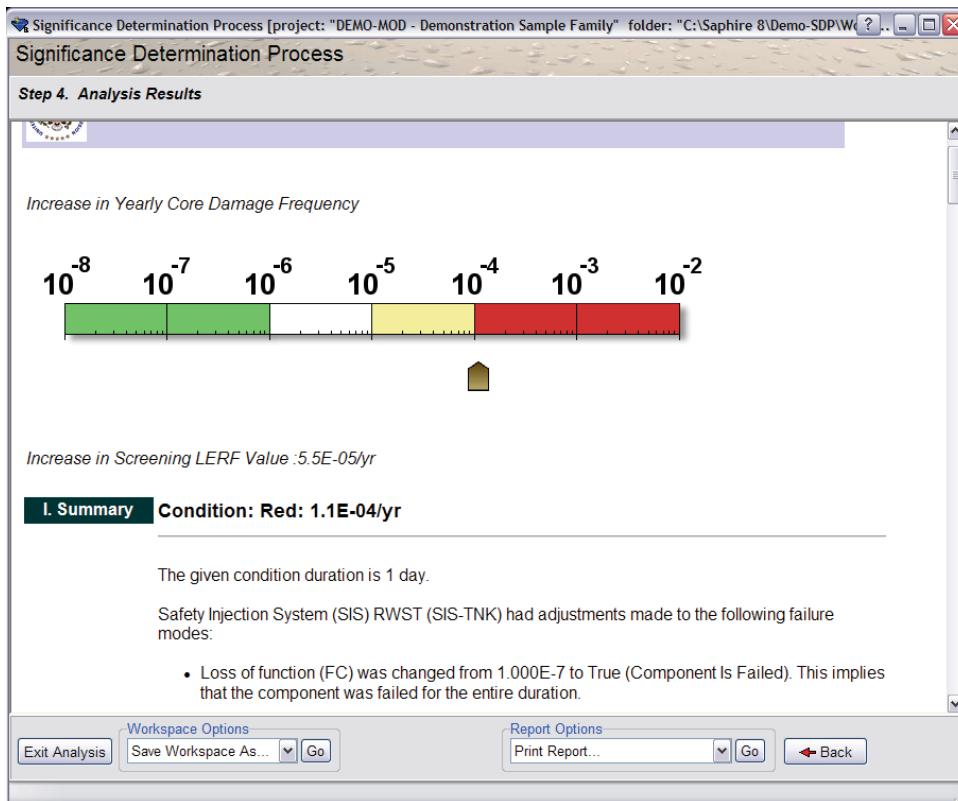

1. Start SAPHIRE and open the DEMO-SDP project.
2. Select the Project → User Settings option.
3. Select the SDP option. Check the Allow LERF Calculation check box.
4. Click the Edit Lerf Factors button.
5. Enter a factor of 0.5 for each sequence (see below) and click Ok. Click Ok.

6. Double click on “New SDP...” option.
7. Click the SIS systems button. Check RWST component.
8. Click Next.
9. Change the Loss of Function failure mode to TRUE.
10. Click Next.
11. Select a 1 day duration, leave the other options at their default values.

12. Click Finish. Click Ok.
13. Verify that the report indicates that the LERF value is 0.5 of the "importance." The importance is 1.1E-4, so the LERF results should be 5.5E-5.

Verified? Yes.

2.0 Test-78

SAPHIRE 8 Testing

Manual Testing to Augment the Automated Test Suite

April 26, 2010

Tester: Curtis Smith

Version: 8.06.06

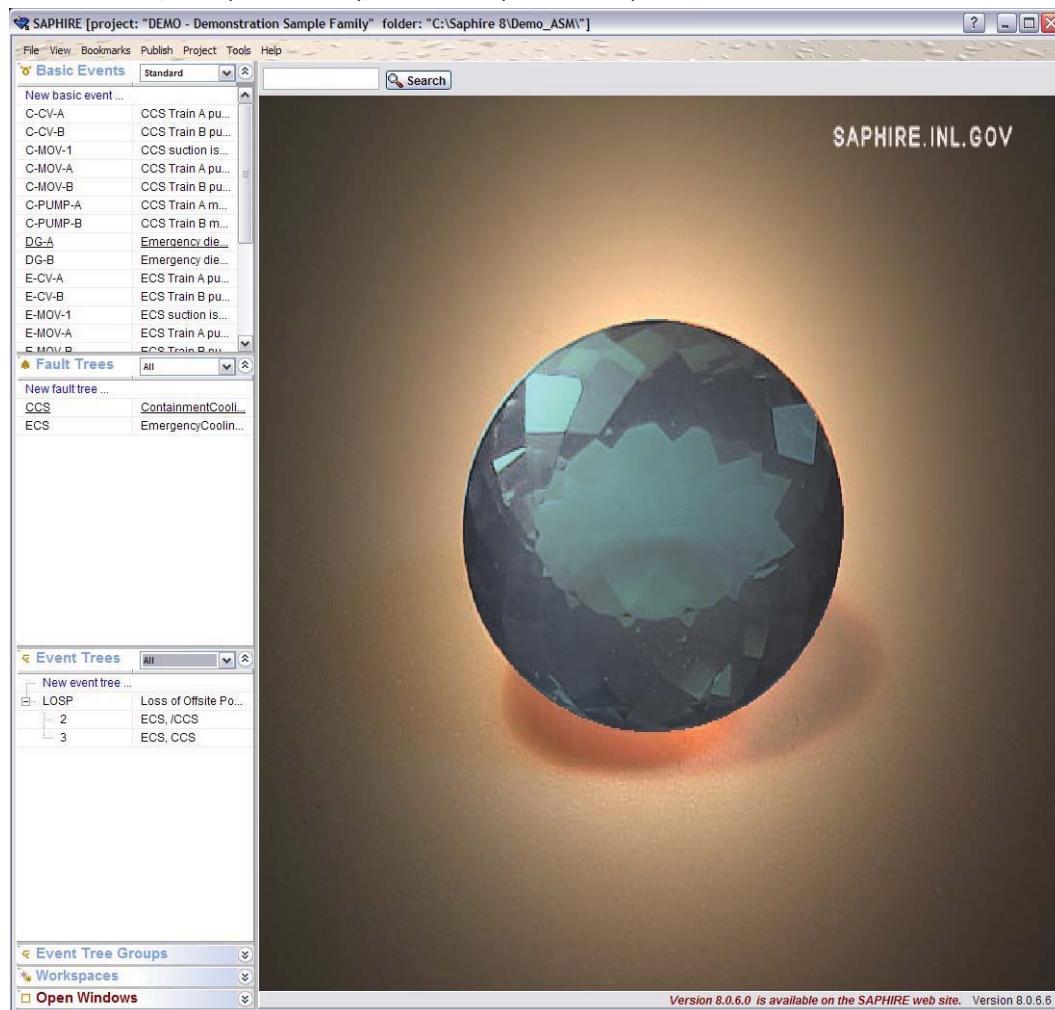

Test 78	Accident Sequence Matrix - Solve Event Trees	This test links event trees after an Accident Sequence Matrix has been loaded, generate basic event data (with no change sets), solve (with cut set probability cutoff) and quantify sequence minimal cut sets, and recovery rules. The current case min cut upper bound, base case min cut upper bound, and cut set totals are verified for each sequence. Results will be compared with results reviewed from a version 7 analysis done by a SPAR model developer at the INL.
----------------	---	--

Steps:

14. Copy DEMO project to new folder, Demo_ASM
15. Create Demo_EE_Accident_Matrix.ASM file in the new folder, with below in the .ASM file.

* Model Type Name,Model Type ID,IE,IE Freq.,IE Desc.,Event Tree Name,Event Tree Desc.,X-fer to,End State Substitution,Flag Set Name,Flag Set Desc.,Flag Set Setting(s),,,,
FIRE,FIR,IE-FRI-1,4.84E-05,Fire Scenario 1,FIRE1,"Demo Fire scenario
1",LOSP,,FIRE_FS_1,Flag Set for Fire Scenario 1,E-CV-A
FIRE,FIR,IE-FRI-2,2.67E-04,Fire Scenario 2,FIRE2,"Demo Fire scenario
2",LOSP,,FIRE_FS_2,Flag Set for Fire Scenario 2,E-CV-B
FIRE,FIR,IE-FRI-3,2.58E-04,Fire Scenario 3,FIRE3,"Demo Fire scenario
3",LOSP,,FIRE_FS_3,Flag Set for Fire Scenario 3,E-MOV-1
FLOOD,FLI,IE-FLOOD-1,4.84E-05,Flood Scenario 1,FLOOD1,"Demo Flood scenario
1",LOSP,,FLOOD_FS_1,Flag Set for Flood Scenario 1,E-CV-A
FLOOD,FLI,IE-FLOOD-2,2.67E-04,Flood Scenario 2,FLOOD2,"Demo Flood scenario
2",LOSP,,FLOOD_FS_2,Flag Set for Flood Scenario 2,E-CV-B
FLOOD,FLI,IE-FLOOD-3,2.58E-04,Flood Scenario 3,FLOOD3,"Demo Flood scenario
3",LOSP,,FLOOD_FS_3,Flag Set for Flood Scenario 3,E-MOV-1
SEISMIC1,EQ1,IE-EQ-BIN-1,1.036E-03,Seismic Scenario 1,SEISMIC1,"Demo Seismic scenario 1",LOSP,,SEISMIC_FS_1,Flag Set for Seismic Scenario 1,E-CV-A
SEISMIC2,EQ2,IE-EQ-BIN-2,2.560E-05,Seismic Scenario 2,SEISMIC2,"Demo Seismic scenario 2",LOSP,,SEISMIC_FS_2,Flag Set for Seismic Scenario 2,E-CV-B
SEISMIC3,EQ3,IE-EQ-BIN-3,8.740E-06,Seismic Scenario 3,SEISMIC3,"Demo Seismic scenario 3",LOSP,,SEISMIC_FS_3,Flag Set for Seismic Scenario 3,E-MOV-1

16. Start SAPHIRE, select the new project, and verify that the existing DEMO_ASM project only contains CCS, ECS (fault trees), and LOSP (event tree).

Verified? Yes.

17. Load the ASM file using the Tools → Load Accident Matrix option.

Verify the “processing log.”

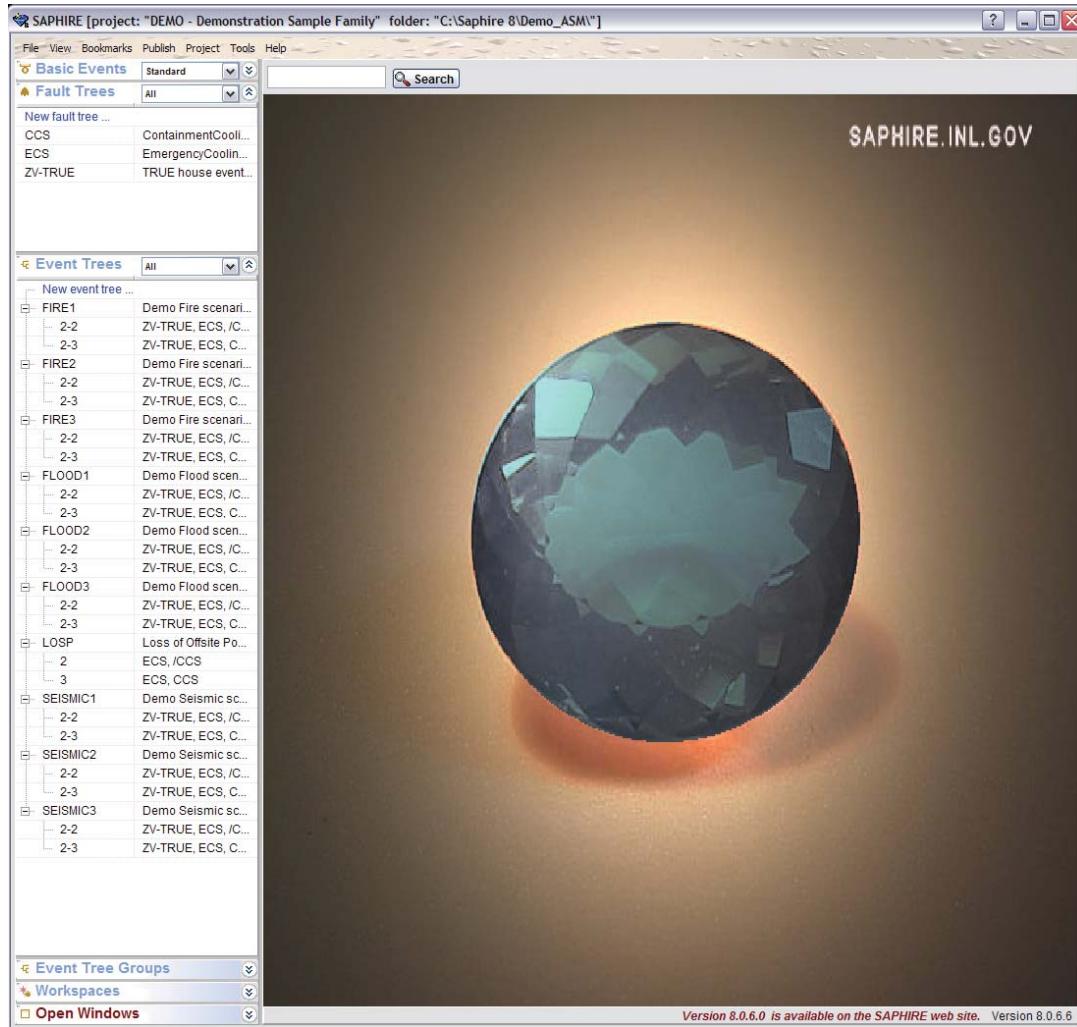

```

Adding the Accident Matrix C:\Saphire
8\Demo_ASM\Demo_EE_Accident_Matrix.asm.
Adding IE-FRI-1. Line 2
Adding IE-FRI-2. Line 3
Adding IE-FRI-3. Line 4
Adding IE-FLOOD-1. Line 5
Adding IE-FLOOD-2. Line 6
Adding IE-FLOOD-3. Line 7
Adding IE-EQ-BIN-1. Line 8
Adding IE-EQ-BIN-2. Line 9
Adding IE-EQ-BIN-3. Line 10
Updating Change Lists.
Matrix Processing Complete.

```

Verified? Yes.

18. Check to see that the applicable fire, flood, and seismic event trees added (as defined in the ASM).

Verified? Yes.

19. Verify that cut sets can be generated for the FIRE1 event tree (using the FIRE model type).

Cut Sets for FIRE1 (ET CutSets)			
Project: DEMO - Demonstration Sample Family Project Folder: C:\Saphire 8\Demo_ASMI Model Type: FIRE			
<input type="button" value="Expand All"/> <input type="button" value="Original"/> <input type="button" value="X"/>			
#	Prob/Freq	Total %	Cut Sets
			Displaying 1 of 1 Cut Sets.
1	1.105E-10	100	FIRE1 :2-3
			5.525E-9 IE-FRI-1 Fire Scenario 1
			2.000E-2 DG-A-FIR Emergency diesel generator A

Show End States : No Partition defined Sequence

Verified? Yes.

- Verify that the LOSP event tree can still generate RANDOM model type cut sets.

Slice Invert Publish Save to End State

Verified? Yes.

3.0 Test-83

Cross-referencing is validated (See #8 ATP input draft)	This test will exercise the various cross referencing capabilities. Results will be reviewed by a SPAR model developer for completeness.
---	--

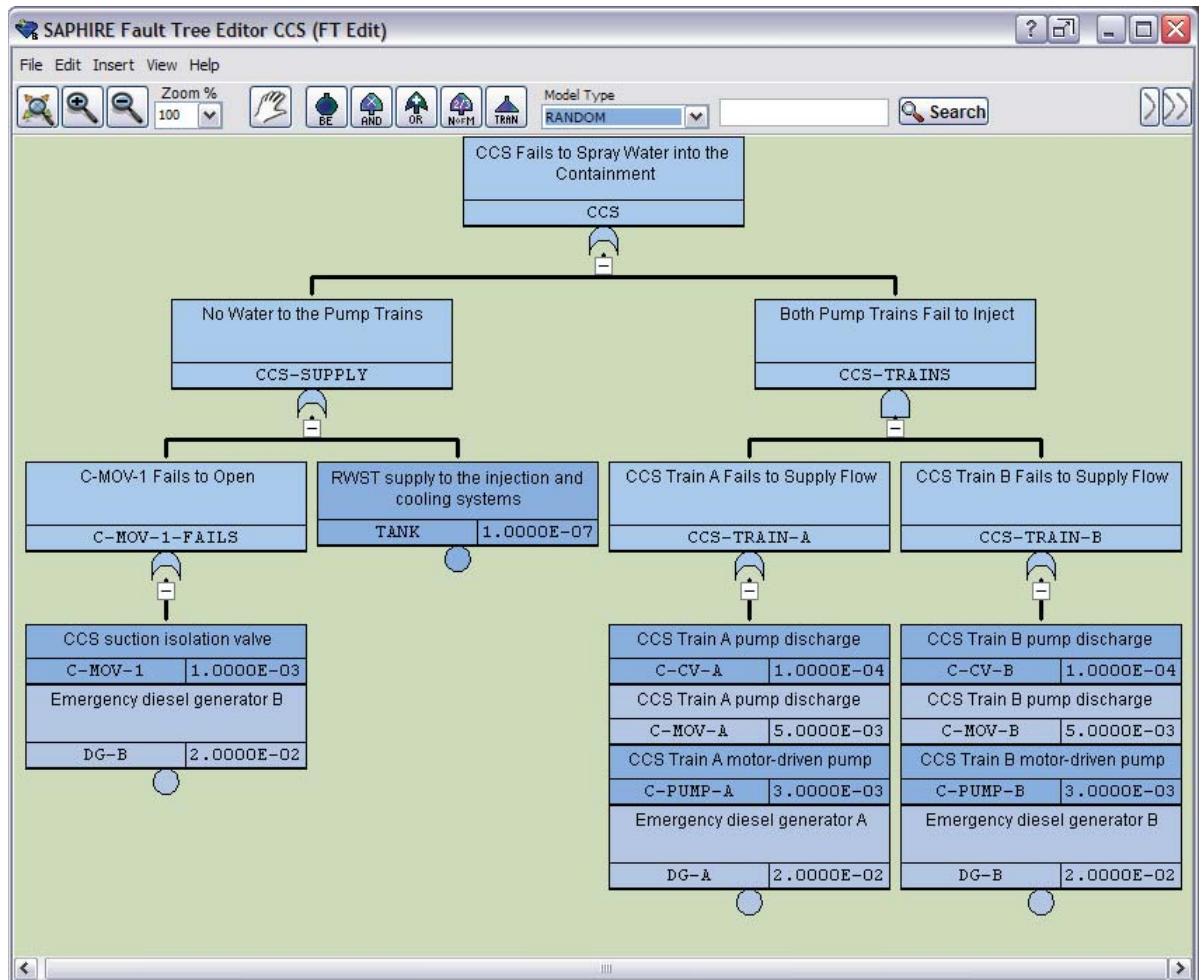

1. Start SAPHIRE, open the DEMO project.
2. Highlight the CCS fault tree.
3. Select Tools → Cross Reference.
4. Open up the “children” nodes to the point where objects are referenced a second time (e.g., CCS using the basic event CCS, which uses the fault tree CCS, which has basic event CCS).

5. Verify that the “used by”cross-referencing appears correct. CCS is used by LOSP (event tree) sequence 2 and 3. CCS is also used by the CCS basic event.

Verified? Yes.

6. Change the “Use/Uses” option to “Uses.”
7. Verify that the objects used by the CCS fault tree are correct.
The fault tree for CCS is:

As can be seen, CCS uses gates CCS-SUPPLY, CCS-TRAINS, etc., and basic events TANK, C-MOV-1, etc.

Root Type	Default Use/Uses	
	Uses	
Name	Use/Uses	Description
CCS	Uses	ContainmentCoolingSystem
Basic Events		
C-CV-A	Uses	CCS Train A pump discharge check valve
C-CV-B	Uses	CCS Train B pump discharge check valve
C-MOV-1	Uses	CCS suction isolation valve
C-MOV-A	Uses	CCS Train A pump discharge isolation valve
C-MOV-B	Uses	CCS Train B pump discharge isolation valve
C-PUMP-A	Uses	CCS Train A motor-driven pump
C-PUMP-B	Uses	CCS Train B motor-driven pump
CCS	Uses	ContainmentCoolingSystem
DG-A	Uses	Emergency diesel generator A
DG-B	Uses	Emergency diesel generator B
TANK	Uses	RWST supply to the injection and cooling systems
Gates		
C-MOV-1-FAILS	Uses	C-MOV-1 Fails to Open
CCS	Uses	CCS Fails to Spray Water into the Containment
CCS-SUPPLY	Uses	No Water to the Pump Trains
CCS-TRAIN-A	Uses	CCS Train A Fails to Supply Flow
CCS-TRAIN-B	Uses	CCS Train B Fails to Supply Flow
CCS-TRAINS	Uses	Both Pump Trains Fail to Inject

Verified? Yes.

8. Close the Cross Reference screen and highlight the LOSP, Sequence 2 event tree.
9. Select the Tools → Cross References option.
10. Verify the “Used By” option for LOSP sequence 2 (no other tree uses LOSP).

Root Type	Default Use/Uses	
	Used By	
Name	Use/Uses	Description
2	Used By	
Event Trees		
LOSP	Used By	Loss of Offsite Power Event Tree

Verified? Yes.

11. Change the “Use/Uses” option to “Uses.”
12. Verify the “Uses” option for LOSP sequence 2 (uses both CCS and ECS).

Cross References		
Root Type	Default Use/Uses	
Name	Use/Uses	Description
2	Uses	
Fault Trees		
CCS	Uses	ContainmentCoolingSystem
ECS	Uses	EmergencyCoolingSystem

Verified? Yes.

13. Close the Cross Reference screen and highlight the LOSP, Sequence 3 event tree.
14. Select the Tools → Cross References option.
15. Verify the “Used By” option for LOSP sequence 3 (no other tree uses LOSP).

Cross References		
Root Type	Default Use/Uses	
Name	Use/Uses	Description
3	Used By	
Event Trees		
LOSP	Used By	Loss of Offsite Power Event Tree

Verified? Yes.

16. Change the “Use/Uses” option to “Uses.”
17. Verify the “Uses” option for LOSP sequence 3 (uses both CCS and ECS).

Cross References		
Root Type	Default Use/Uses	
Name	Use/Uses	Description
3	Uses	
Fault Trees		
CCS	Uses	ContainmentCoolingSystem
ECS	Uses	EmergencyCoolingSystem

Verified? Yes.

4.0 Test-85

NAME OF APPLICATION UNDER TEST: SAPHIRE 8.0

TEST CASE PURPOSE: Test 85 – Verify event tree/fault tree transfers function correctly.

REQUIREMENT(S) VERIFIED:

SDP Tests

TEST 01 Add an internal transfer to a Fault tree.

TEST 02 Add an external transfer to a Fault tree.

TEST 03 Test “Move to transfer” for internal and external transfers.

TEST 04 Make an Event Tree End State go to a transfer.

TEST 05 Test Dbl Click brings you to the transferred Event Tree.

TEST CASE ABSTRACT OF TECHNIQUES USED TO TEST THE FEATURE:

None

OTHER FILES REQUIRED TO RUN TEST CASE:

Did test on OYST-345.exe project dated 3-19-2010

TEST PERFORMED BY : Steve Prescott
TEST DATE : 4/26/10

5.0 Test-89

NAME OF APPLICATION UNDER TEST: SAPHIRE 8.0

TEST CASE PURPOSE: **Test 89** - This tests the Significance Determination Process and the Event and Condition Analysis interfaces. The buttons for moving back and forth between screens, canceling, and saving will be tested. Results will be reviewed by a software developer.

REQUIREMENT(S) VERIFIED:

SDP Tests

TEST 01 Tested all Next buttons to end of SDP and Back buttons to the start.

TEST 02 Intermediate saves and closes reopen to previous state.

TEST 03 Cancel in middle of solve.

ECA Tests

TEST 01 Tested all Next buttons to end of SDP and Back buttons to the start.

TEST 02 Intermediate saves and closes reopen to previous state.

TEST 03 Cancel in middle of solve.

TEST CASE ABSTRACT OF TECHNIQUES USED TO TEST THE FEATURE:

None

OTHER FILES REQUIRED TO RUN TEST CASE:

OYST-345.exe project dated 3-19-2010

TEST PERFORMED BY : Steve Prescott
TEST DATE : 3/31/10

6.0 Test-90

NAME OF APPLICATION UNDER TEST: SAPHIRE 8.0

TEST CASE PURPOSE: Test 90 - This verifies that the Standard Analysis Interface in the fault tree feature "View Expanded" is working. Results will be reviewed by a software developer.

REQUIREMENT (S) VERIFIED:

TEST 01 Check view Expanded in FT viewer File Options.

TEST CASE ABSTRACT OF TECHNIQUES USED TO TEST THE FEATURE:

OTHER FILES REQUIRED TO RUN TEST CASE:

Demo –SDP project

TEST PERFORMED BY : Steve Prescott
TEST DATE : 3/31/10

7.0 Test-93

SAPHIRE 8 Testing

Manual Testing to Augment the Automated Test Suite

April 26, 2010

Tester: Curtis Smith

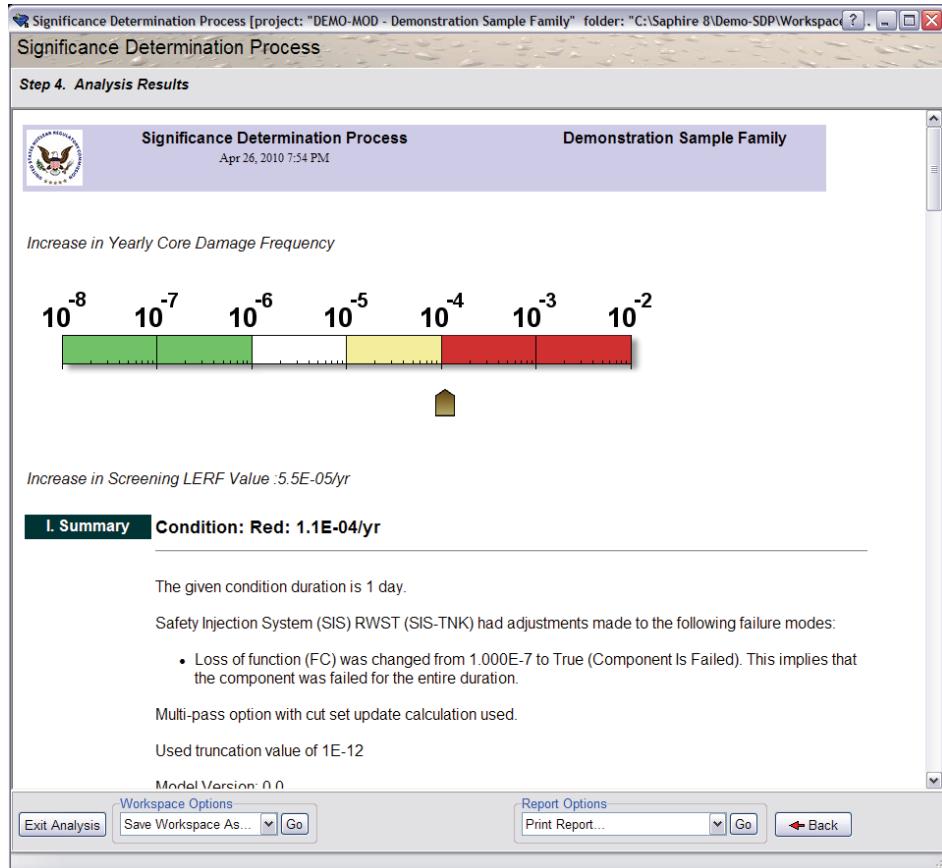

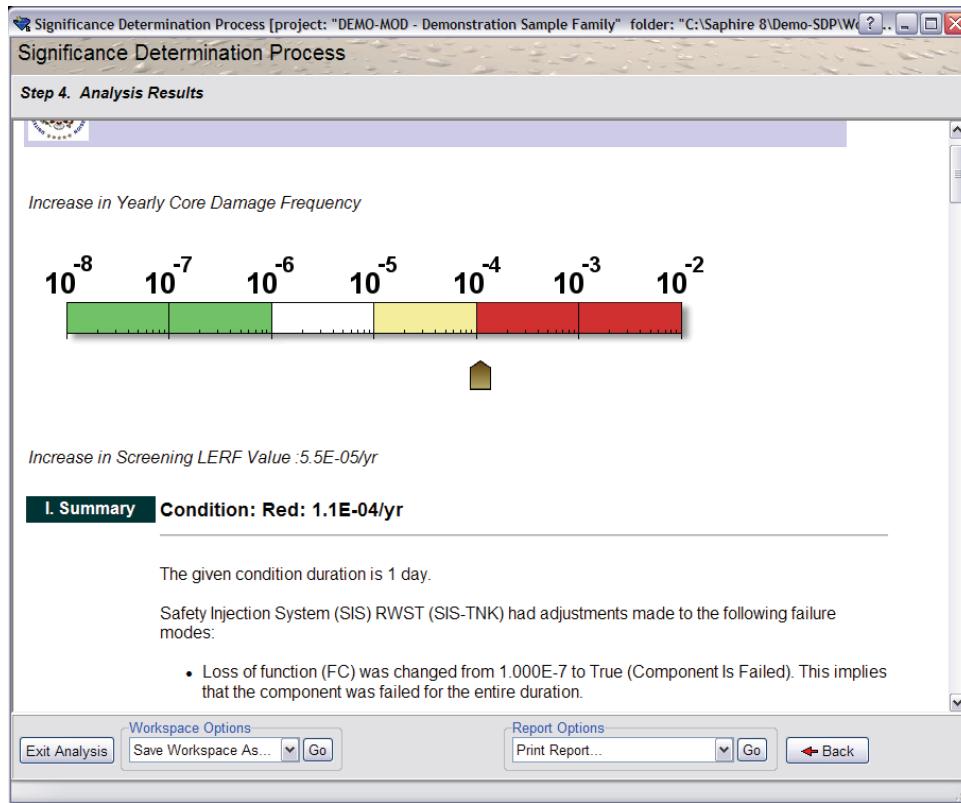

Version: 8.06.06

Test 93	Workspace to Workspace Independence	This tests the addition of a new workspace or editing existing workspaces do not impact other workspaces. Tests should verify that changes made to Standard Analysis after the creation of a workspace should not reflect that change. Test on Significance Determination Process, Event and Condition Analysis, General Analysis workspaces. A software analyst will review these results.
----------------	--	---

This test will be conducted by using a single project (DEMO-SDP) by rerunning Test 77, running an ECA and GA, then modifying the Standard Analysis and checking to see that the saved workspaces (SDP, ECA, and GA) are untouched.

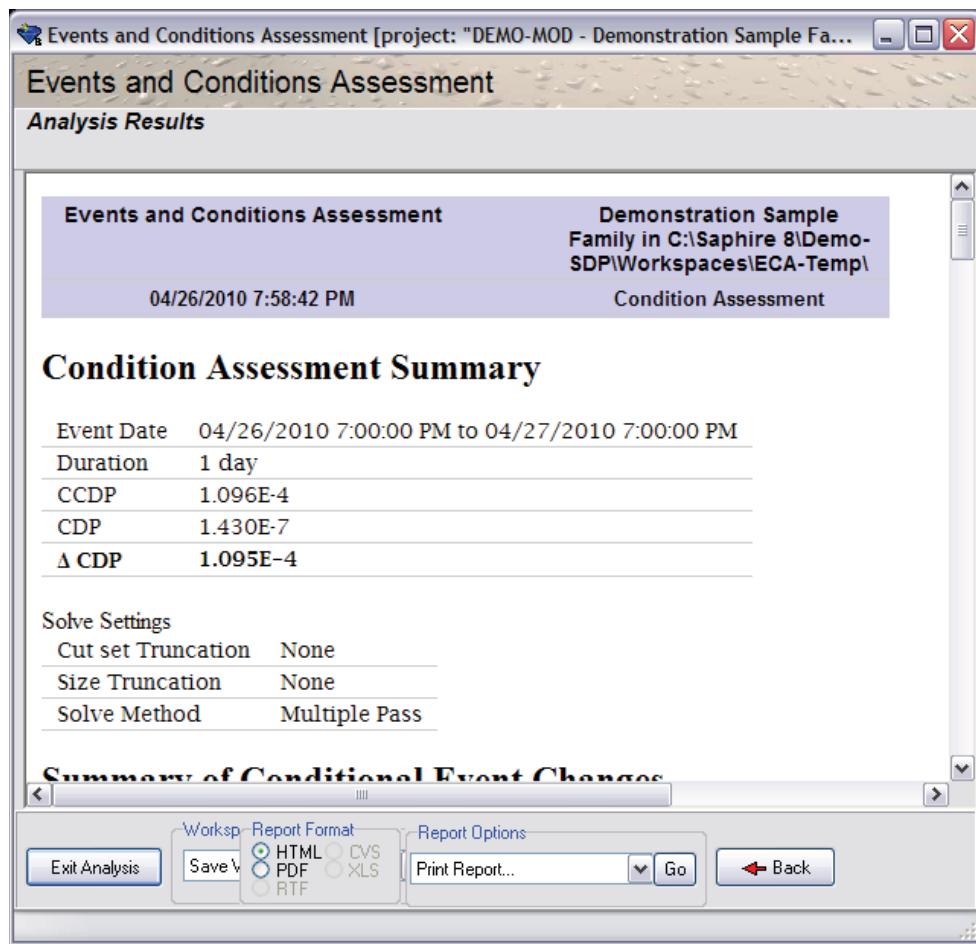

Steps:

1. Start SAPHIRE and rerun Test 77 (using the DEMO-SDP project).
2. Verify the results (below) from Test 77.

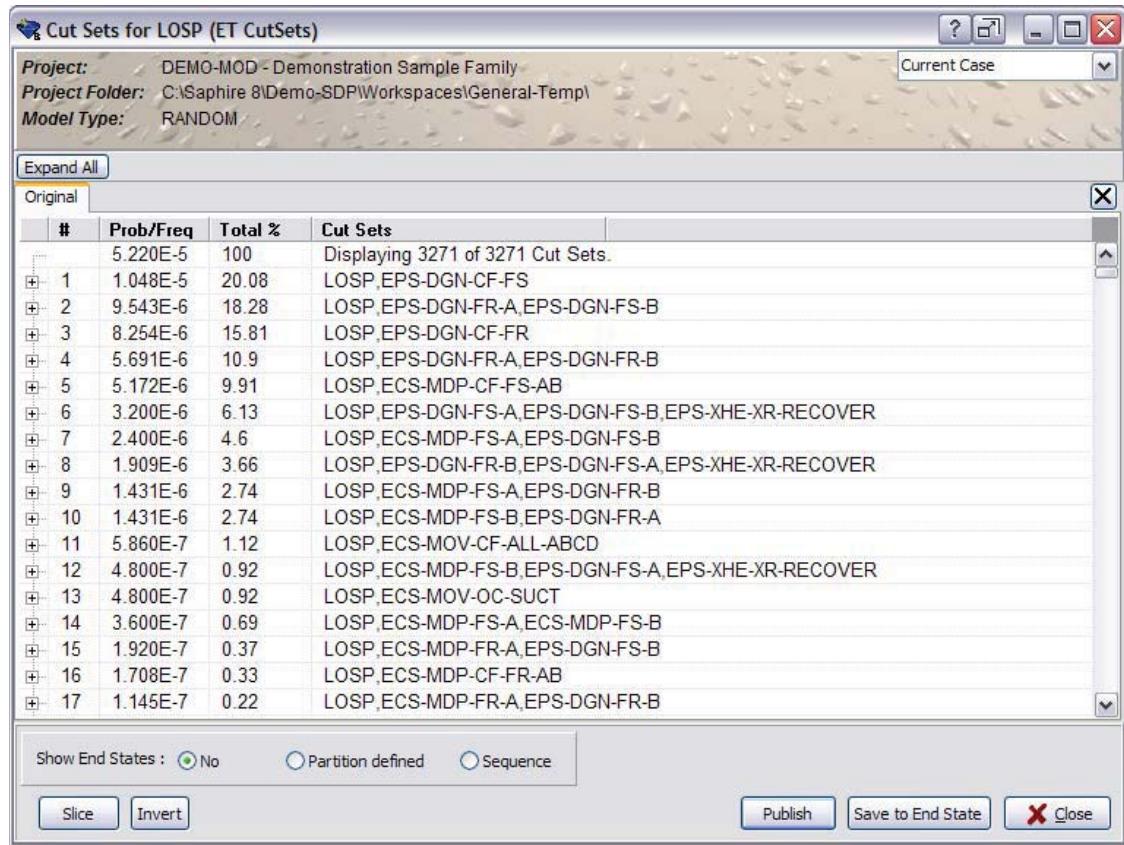

Verified (to this point)? Yes.

3. Save the Workspace (call it Test-93-SDP). Exit the workspace.
4. Without closing SAPHIRE, double click “New ECA...”
5. Select condition assessment, duration of 1 day. Click Next.
6. Select SIS-TNK-FC-RWST basic event. Click Next.
7. Change the SIS-TNK-FC-RWST to TRUE. Click Next.
8. Click Finish. Click Ok.
9. Verify to see that the Delta CDP is 1.1E-4.

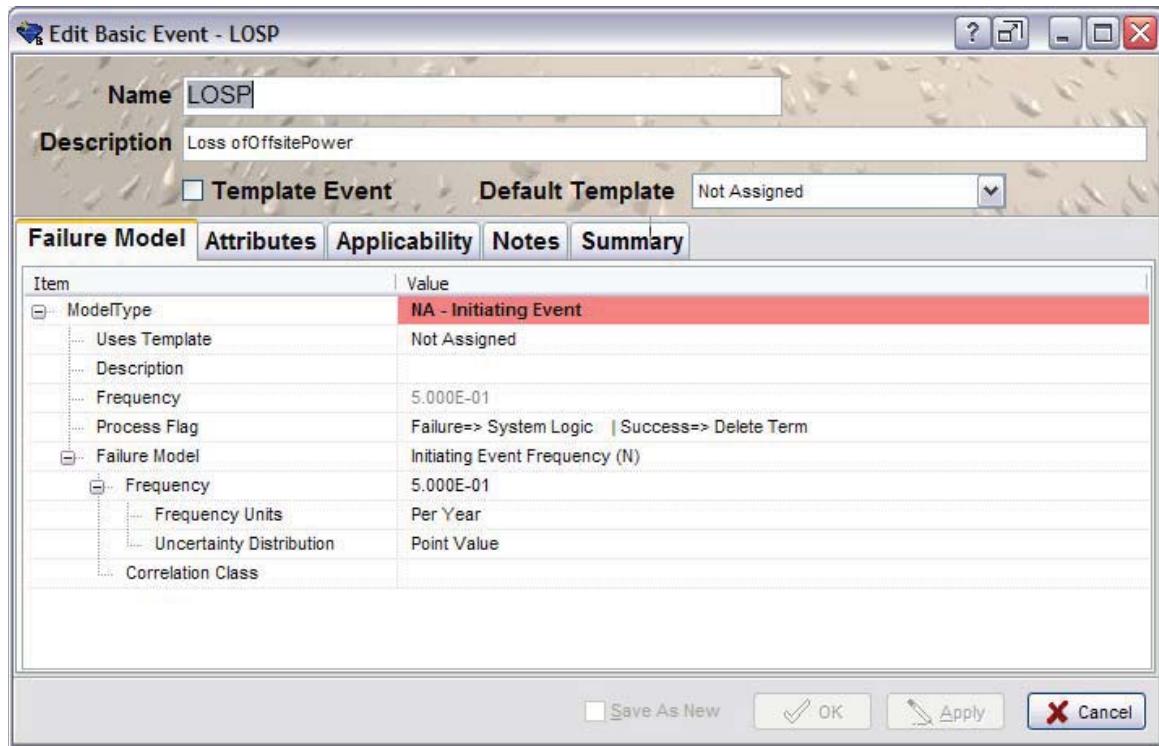

Verified (to this point)? Yes.

10. Save the Workspace (call it Test-93-ECA). Exit the workspace.
11. Without closing SAPHIRE, double click “New Analysis...” (under General Analysis).
12. Select CC-CKV-CC-1A. Click Next.
13. Change CCS-CKV-CC-1A to 1E-3. Click Next.
14. Check Event Trees (All Event Trees). Click Finish. Click Ok.
15. Highlight the LOSP event tree, right click and select View Cut Sets.
16. Verify to see that the cut sets give a value of 5.22E-2.

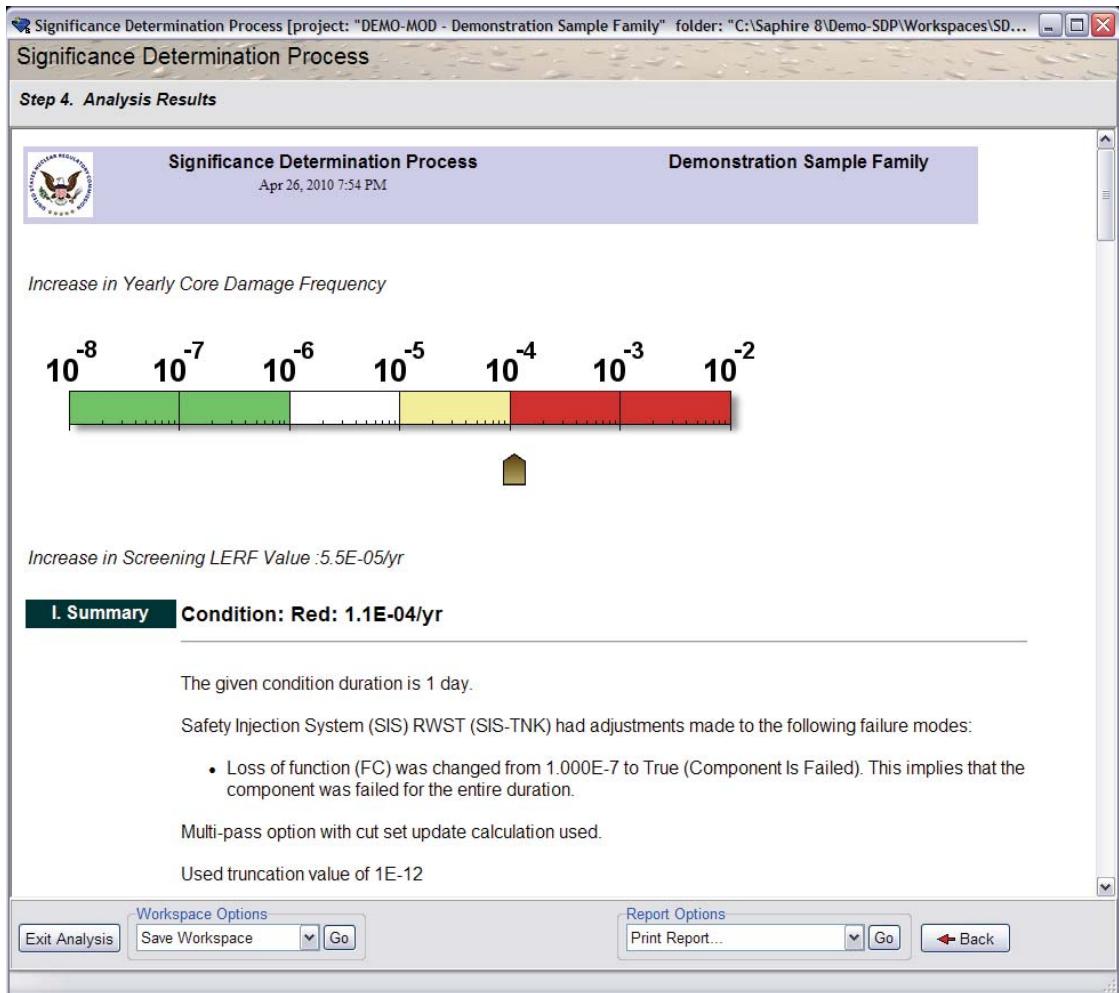

Verified (to this point)? Yes.

17. Save the Workspace (call it Test-93-GA). Exit the workspace.
18. Now, double click on the LOSP basic event. Change the frequency to 0.5 per year. Click Ok.

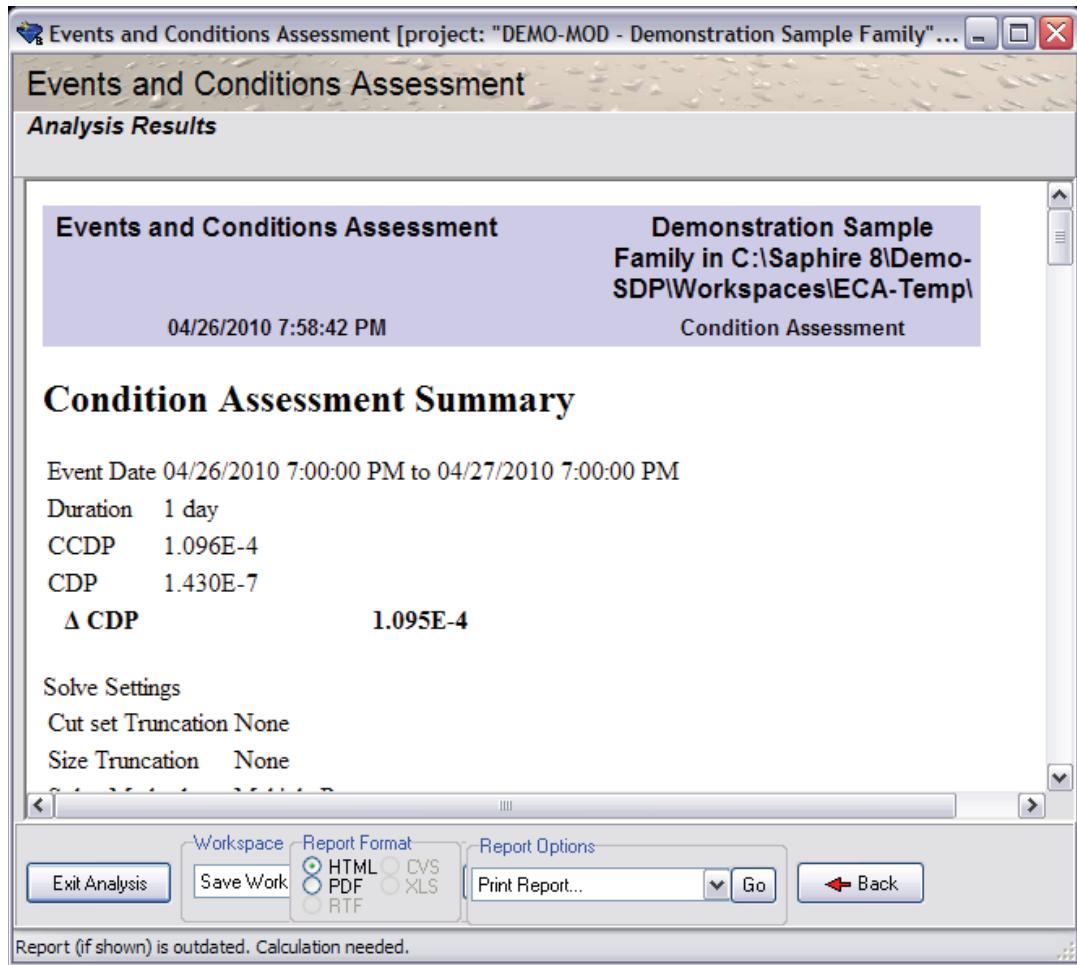

19. Double click on the SIS-TNK-FC-RWST basic event. Change its probability for RANDOM to 0.2 (from 1E-7). Click Ok.
20. Now, double click on the saved SDP workspace (Test-93-SDP). Verify that the results have not changed.

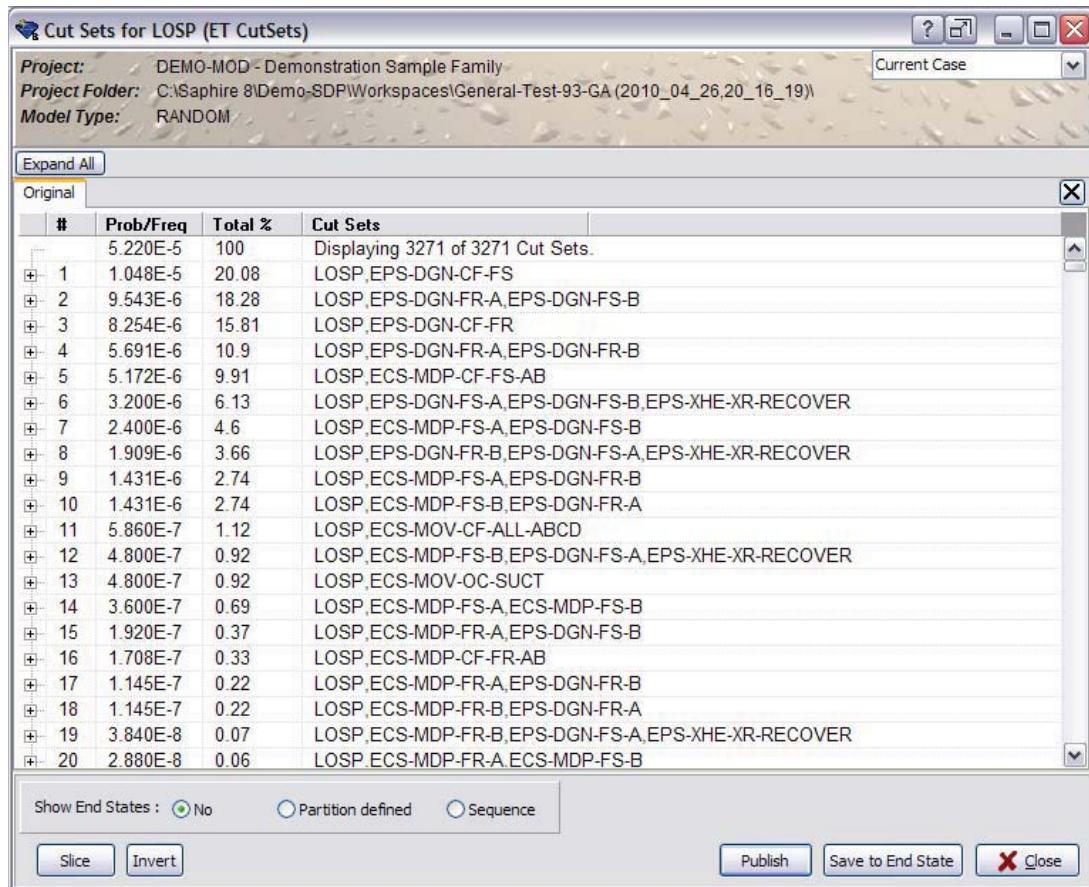

Verified (to this point)? Yes.

21. Exit the Workspace. Now, double click on the saved ECA workspace (Test-93-ECA). Verify that the results have not changed.

Verified (to this point)? Yes.

22. Exit the Workspace. Now, double click on the saved GA workspace (Test-93-ECA). Verify that the results have not changed.

Verified (overall)? Yes.

8.0 Test-94

SAPHIRE 8 Testing

Manual Testing to Augment the Automated Test Suite

April 26, 2010

Tester: Curtis Smith

Version: 8.06.06

Test 94	Project to Project Independence	This test verifies that opening up a project does not include anything from a previously opened project database. Examine database to ensure previous database (different from the one just opened) information is not present. Reports should be initially reviewed by a software developer and then compared with future test runs.
---------	---------------------------------	---

This project will be conducted by sequentially rerunning the following manual tests (and verifying the results do not change as sequential projects are opened, note that SAPHIRE will not be closed from test-to-test) in order:

Test 77

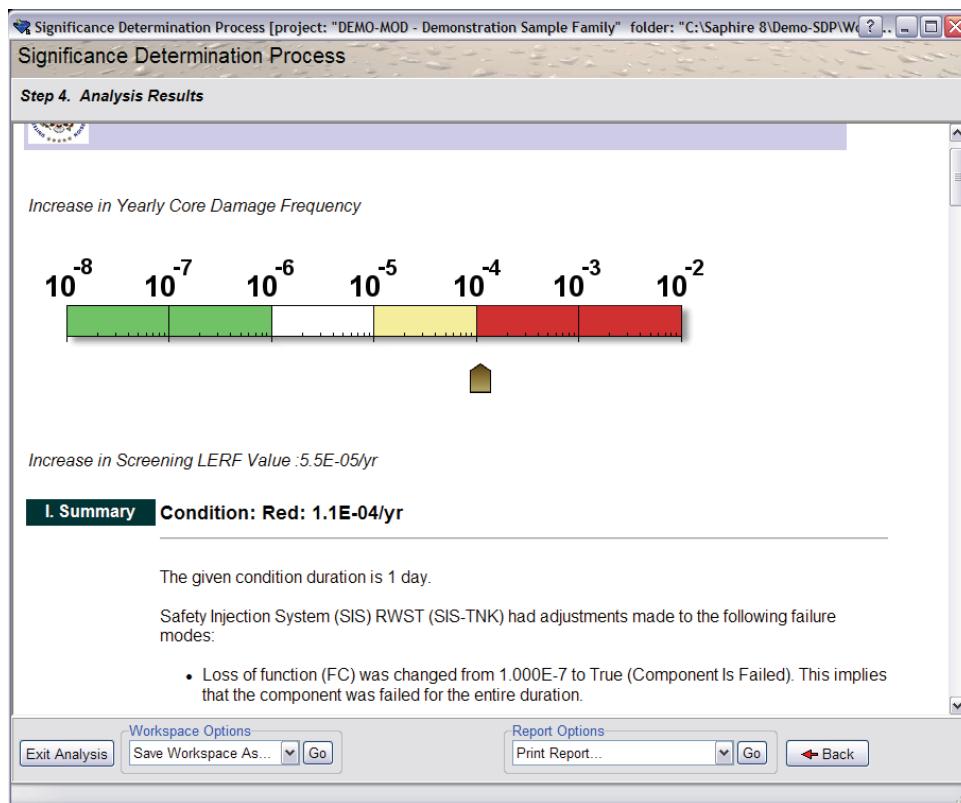

Test 102

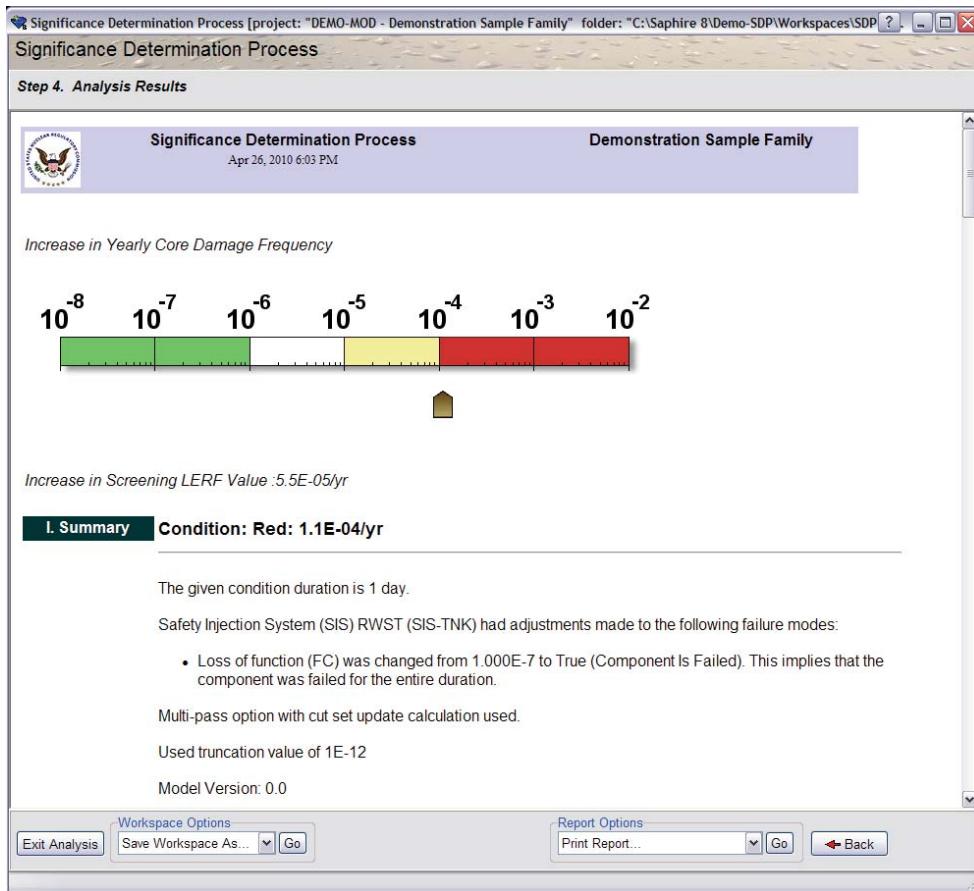

Test 98

Test 104

Steps:

1. Start SAPHIRE and rerun Test 77 (using the DEMO-SDP project).
2. Verify the results (below) from Test 77.

Verified (to this point)? Yes.

3. Without closing SAPHIRE, run Test 102 (using the DEMO-SDP project).
4. Verify the results (below) from Test 102.

9.0 Test-97

NAME OF APPLICATION UNDER TEST: SAPHIRE 8.0

TEST CASE PURPOSE: Test 97 - Event Tree Linking and Unlink in integrated models (External Events and Shutdown)

REQUIREMENT(S) VERIFIED:

TEST 01 Link 5 different event trees and verify cut sets exist.

TEST 02 Un-Link the 5 trees and verify no cut sets exist.

TEST CASE ABSTRACT OF TECHNIQUES USED TO TEST THE FEATURE:

None

OTHER FILES REQUIRED TO RUN TEST CASE:

TEST PERFORMED BY : Steve Prescott
TEST DATE : 3/31/10

10.0 Test-98

SAPHIRE 8 Testing

Manual Testing to Augment the Automated Test Suite

April 26, 2010

Tester: Curtis Smith

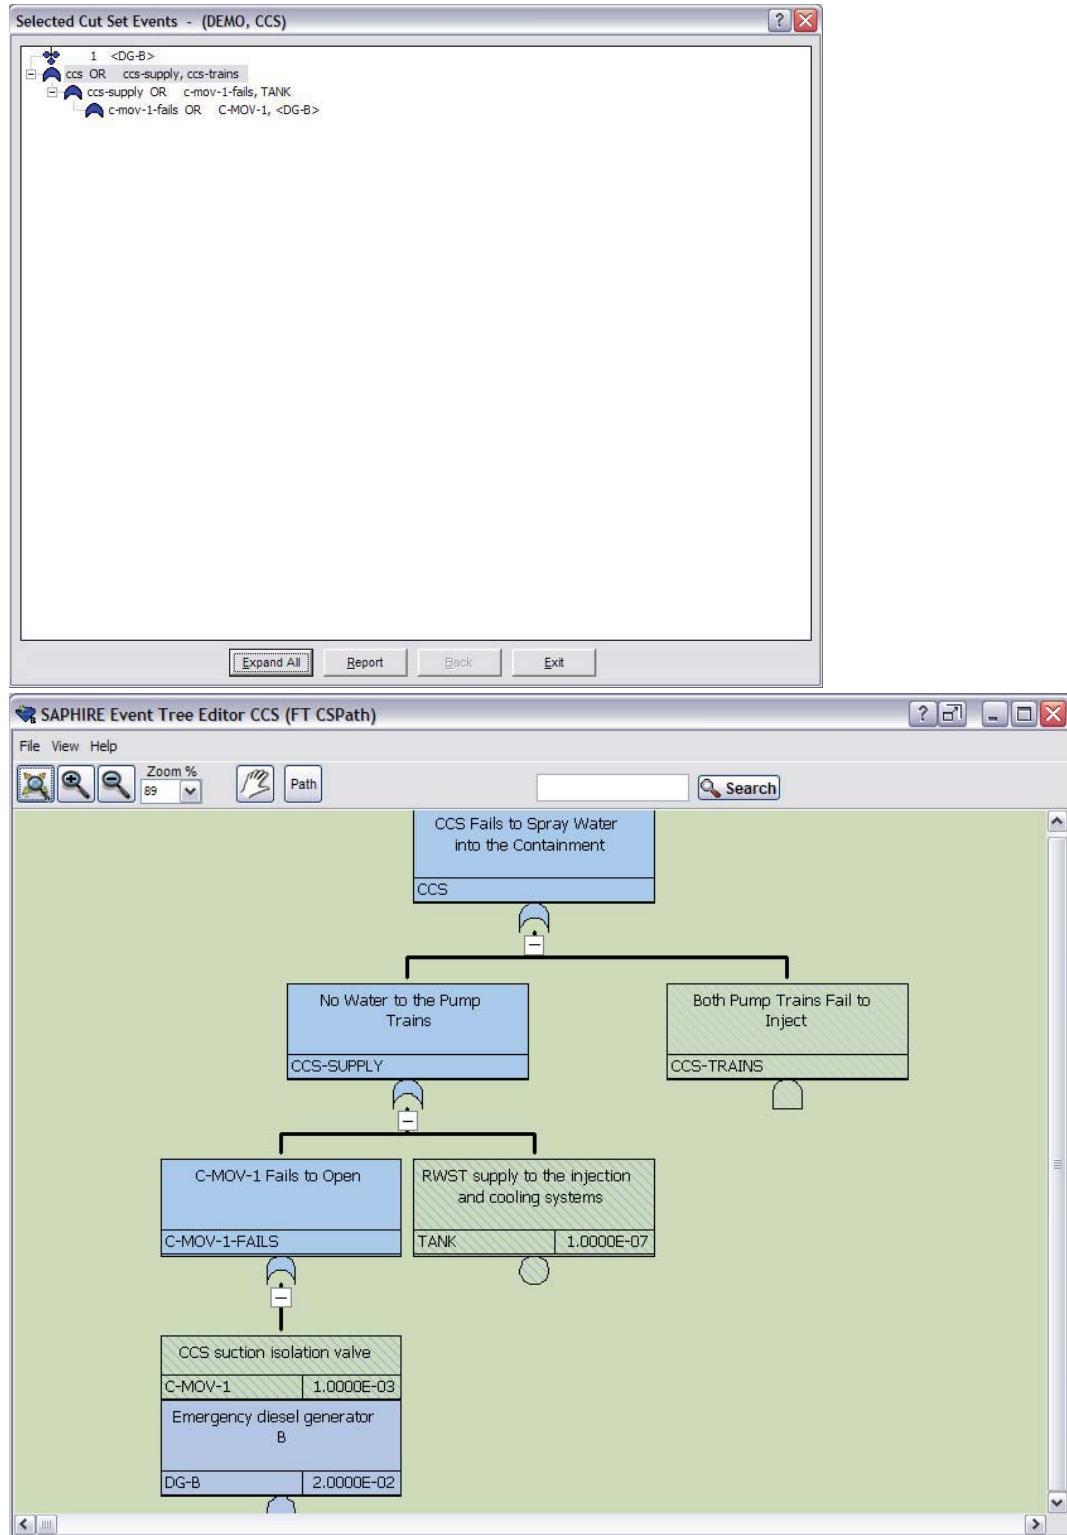

Version: 8.06.06

Test 98	Verification of cut set view path	This test verifies all cut set path features work. The initial test will be visually verified with reports produced. Subsequent tests will compare reports to verified reports. Especially test this capability in the advanced Significance Determination Process report per cut set. Results will be reviewed by a SPAR model developer at the INL.
---------	-----------------------------------	---

Steps:

1. Start SAPHIRE and open the DEMO project.
2. Highlight the CCS fault tree.
3. Right click and select "View Cut Sets."

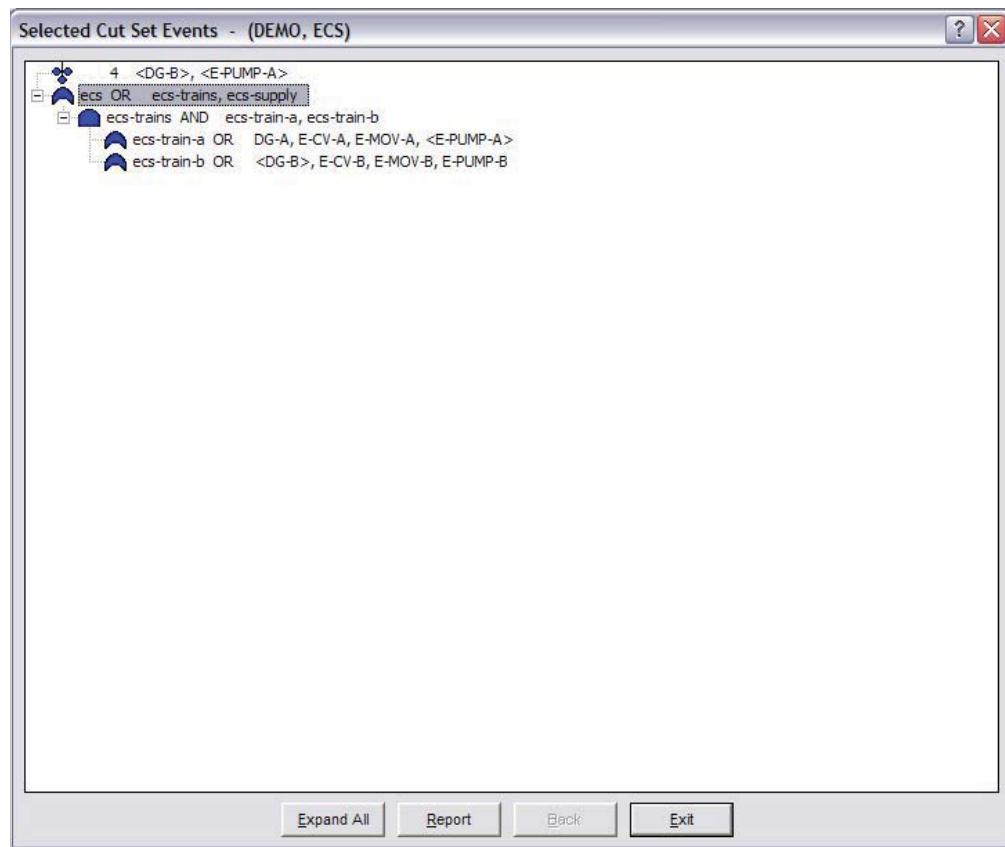

4. Select the dominant cut set (DG-B), right click and select “View Path.
5. Verify against the SAPHIRE 7 view path option.

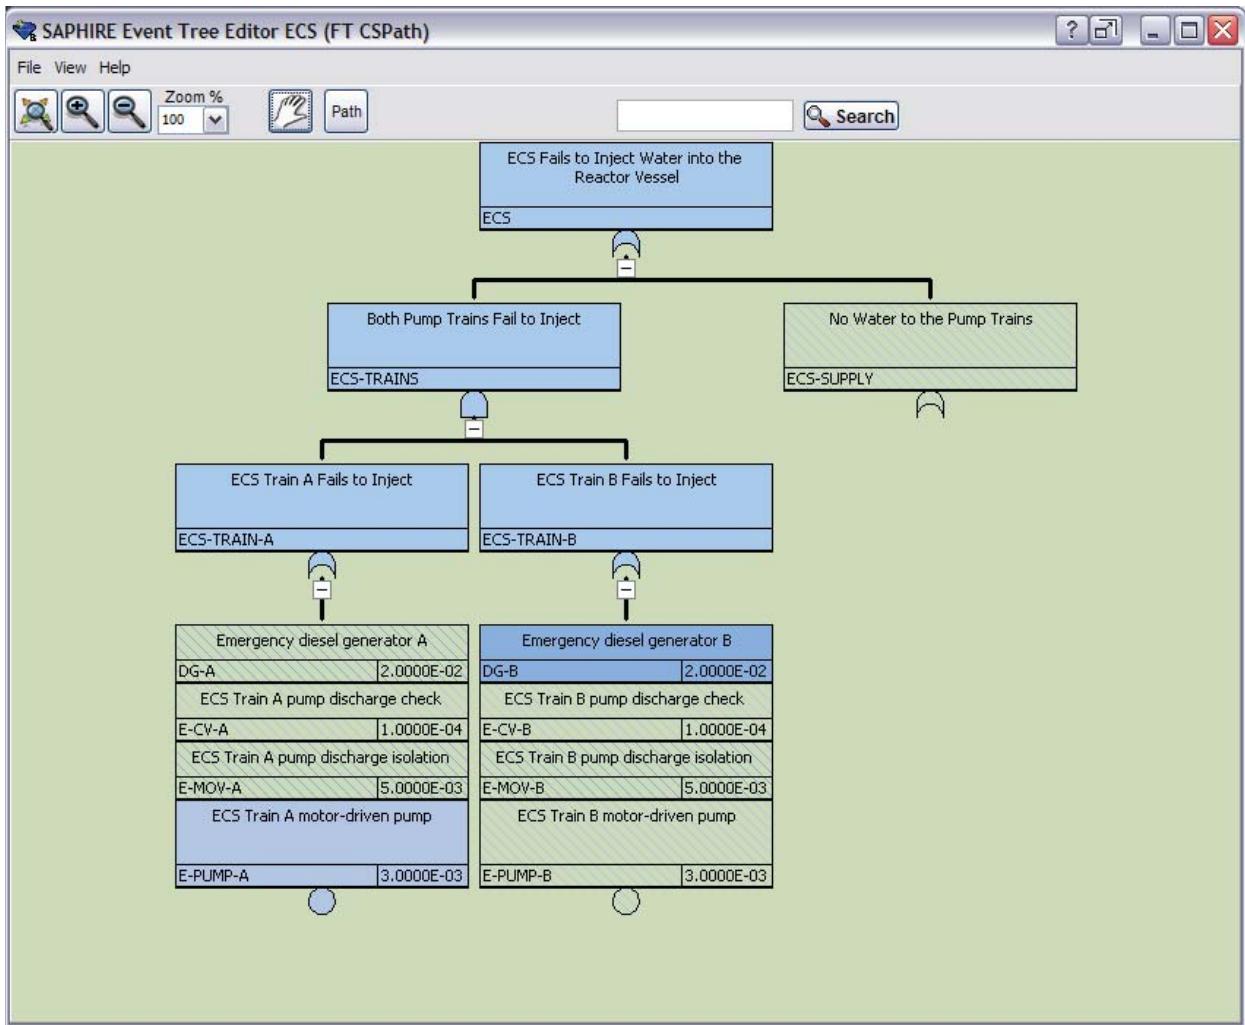

Verified? Yes.

6. Close the path viewer and select the ECS fault tree.
7. Right click and select “View Cut Sets.

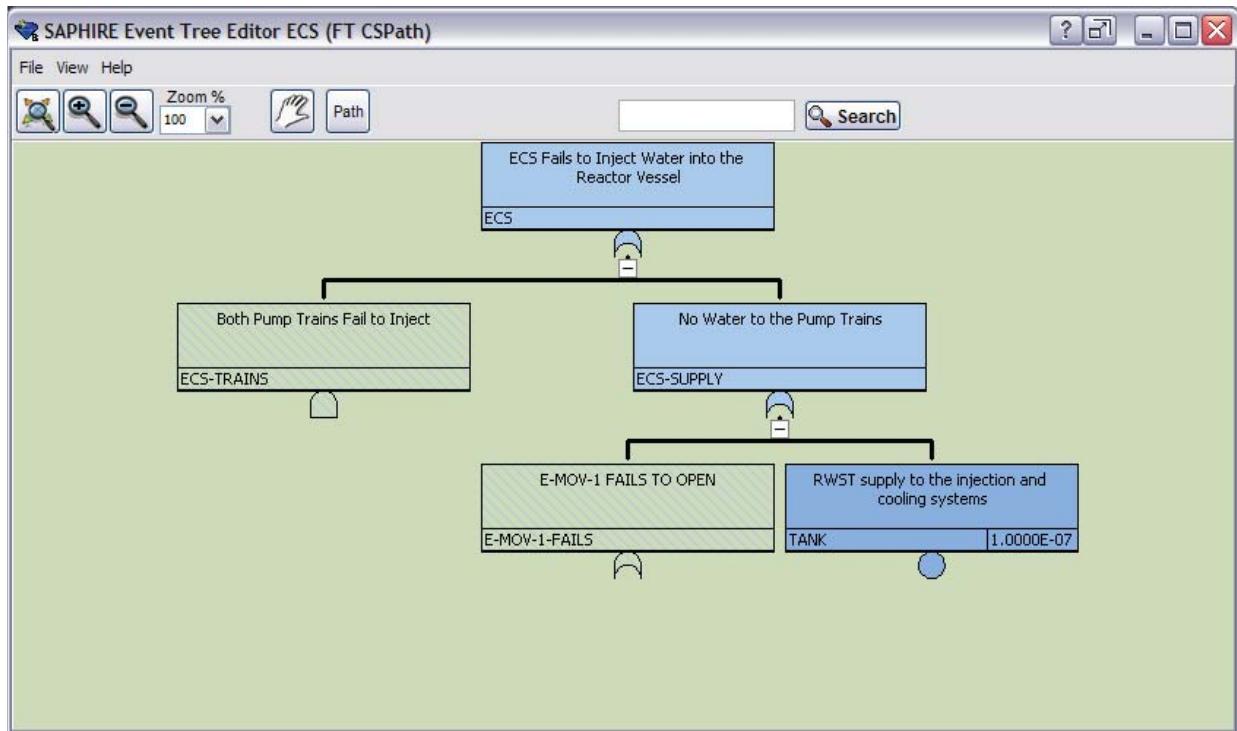

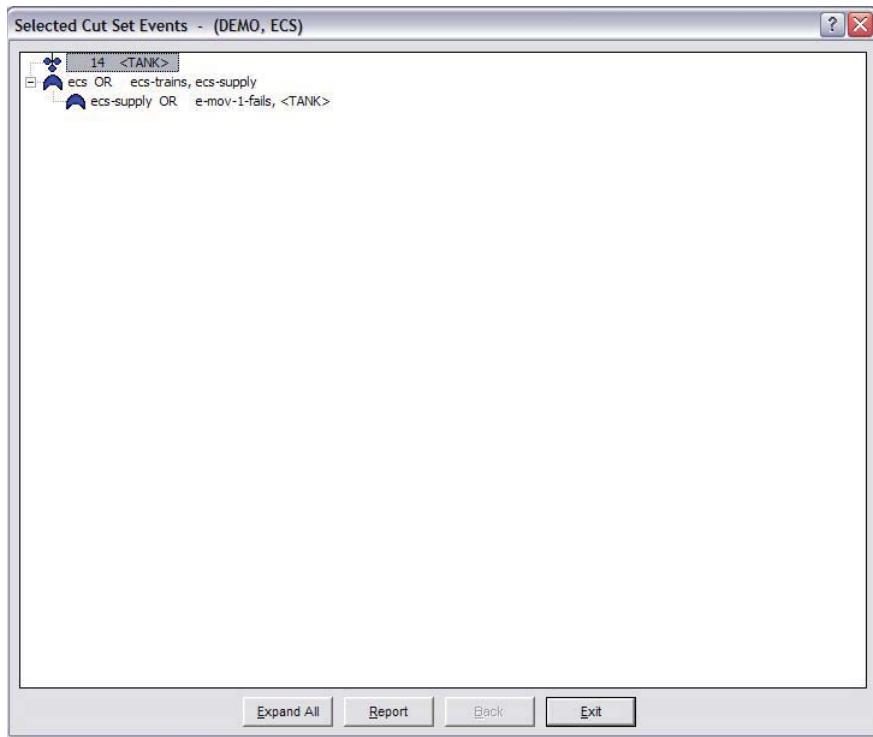

8. Select the #4 cut set (DG-B * E-PUMP-A), right click and select “View Path.
9. Verify against the SAPHIRE 7 view path option.

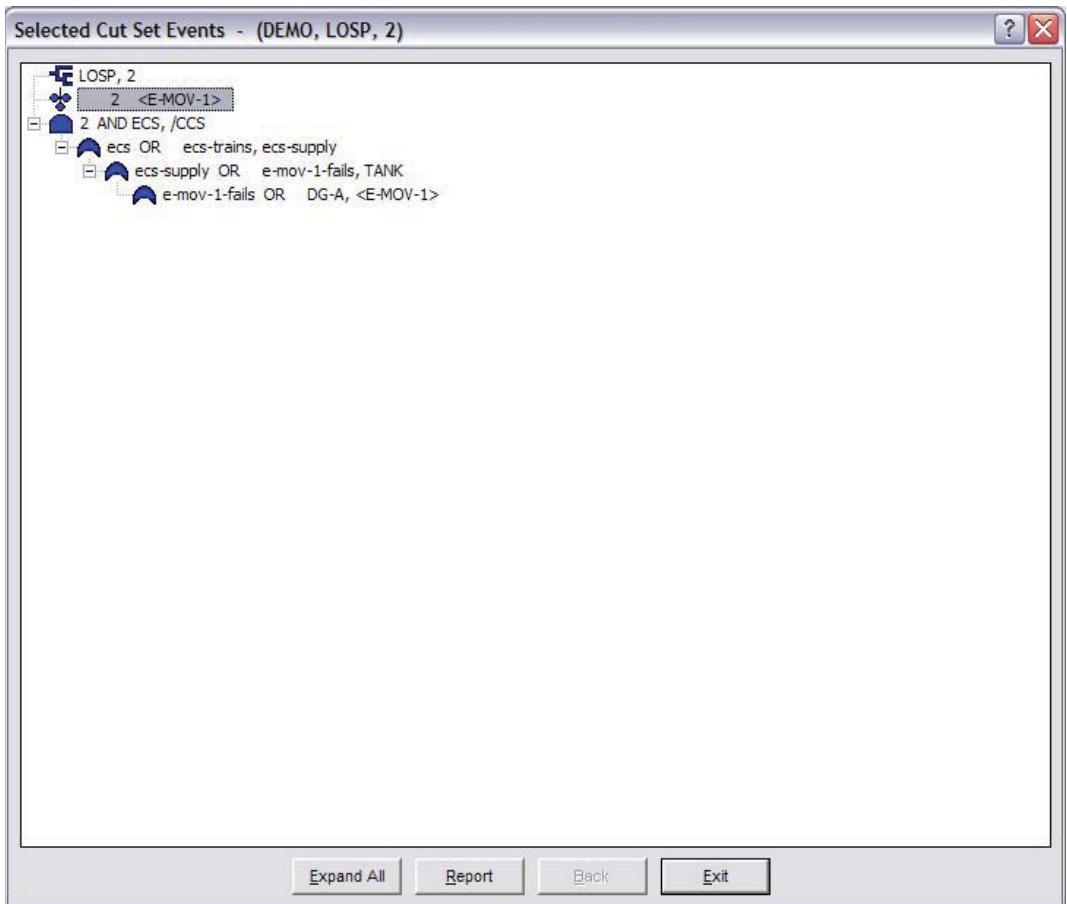

Verified? Yes.

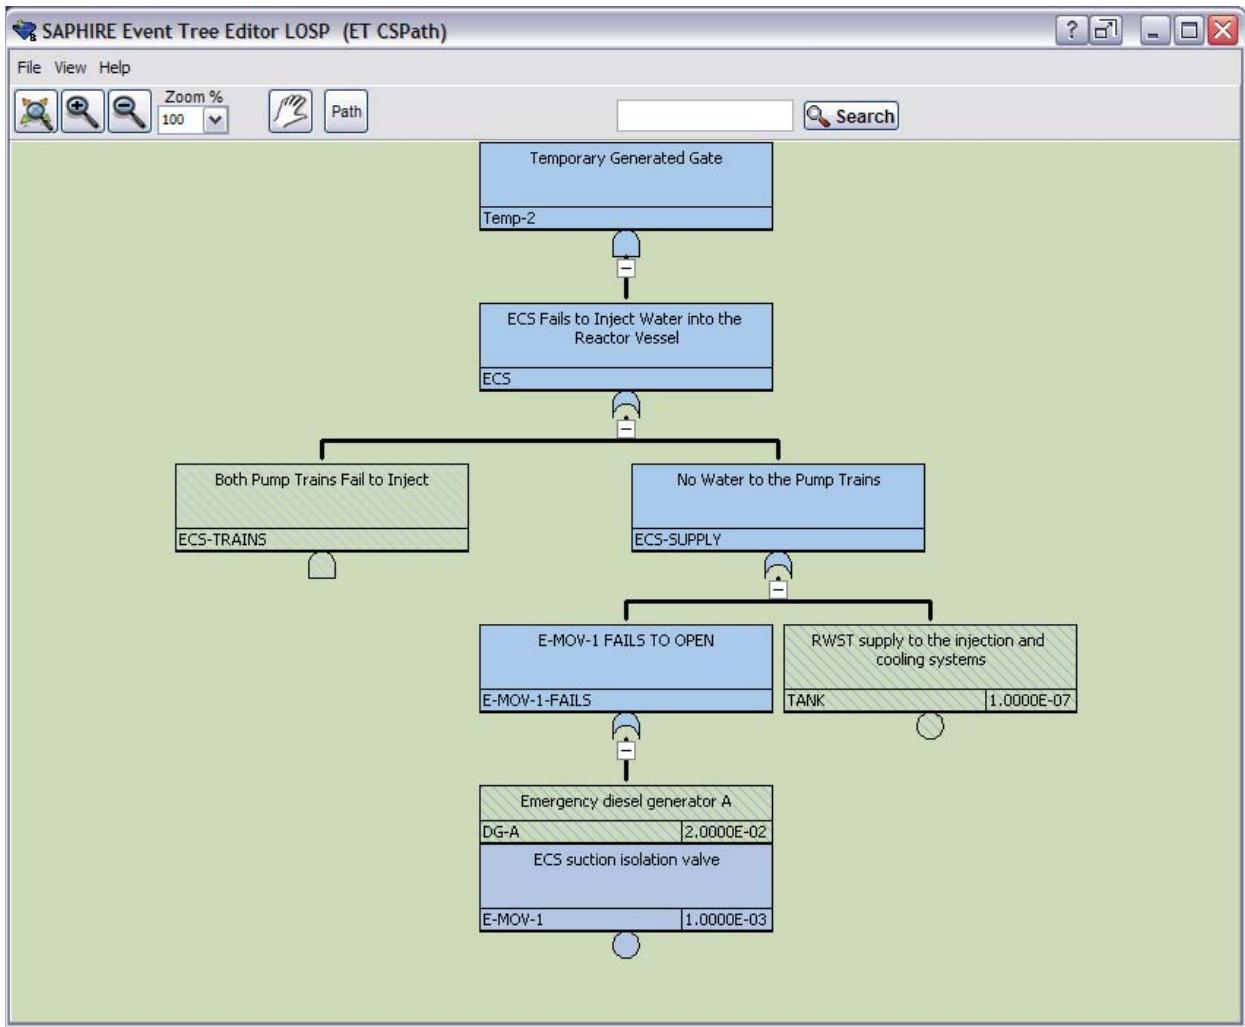

10. Close the path viewer and select the TANK cut set (cut set #14 from ECS).
11. Right click and select the “View Path” option.
12. Verify against the SAPHIRE 7 view path option.

Verified? Yes.

13. Close the path viewer and select the LOSP event tree.
14. Right click and select “View Cut Sets.”
15. Select the #2 cut set (LOSP and E-MOV-1), right click and select “View Path.”
16. Verify against the SAPHIRE 7 view path option.

Verified? Yes.

11.0 Test-102

SAPHIRE 8 Testing

Manual Testing to Augment the Automated Test Suite

April 26, 2010

Tester: Curtis Smith

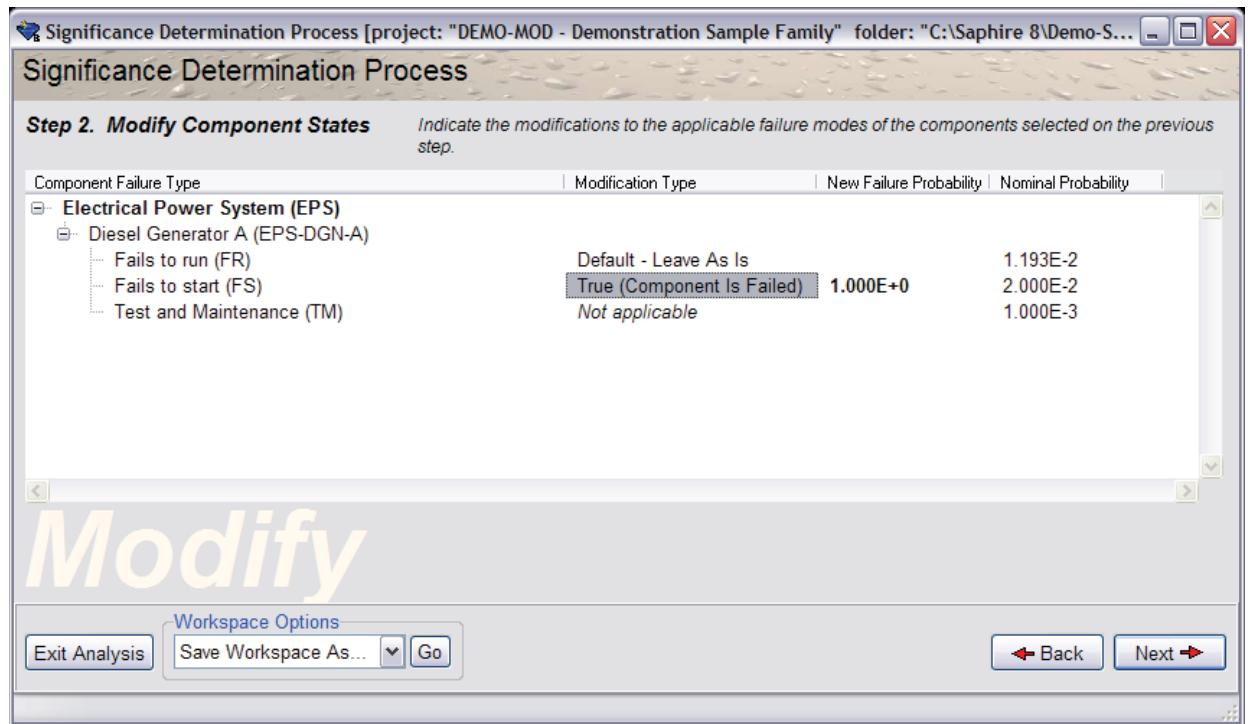

Version: 8.06.06

Test 102	Significance Determination Process Interface testing of basic event changes	This test exercises Significance Determination Process basic event testing. Ensure that choosing "True" performs a CCF probability calculation correctly and choosing "True" automatically handles T&M basic events correctly. Results will be reviewed by a SPAR model developer at the INL."
----------	---	--

Steps:

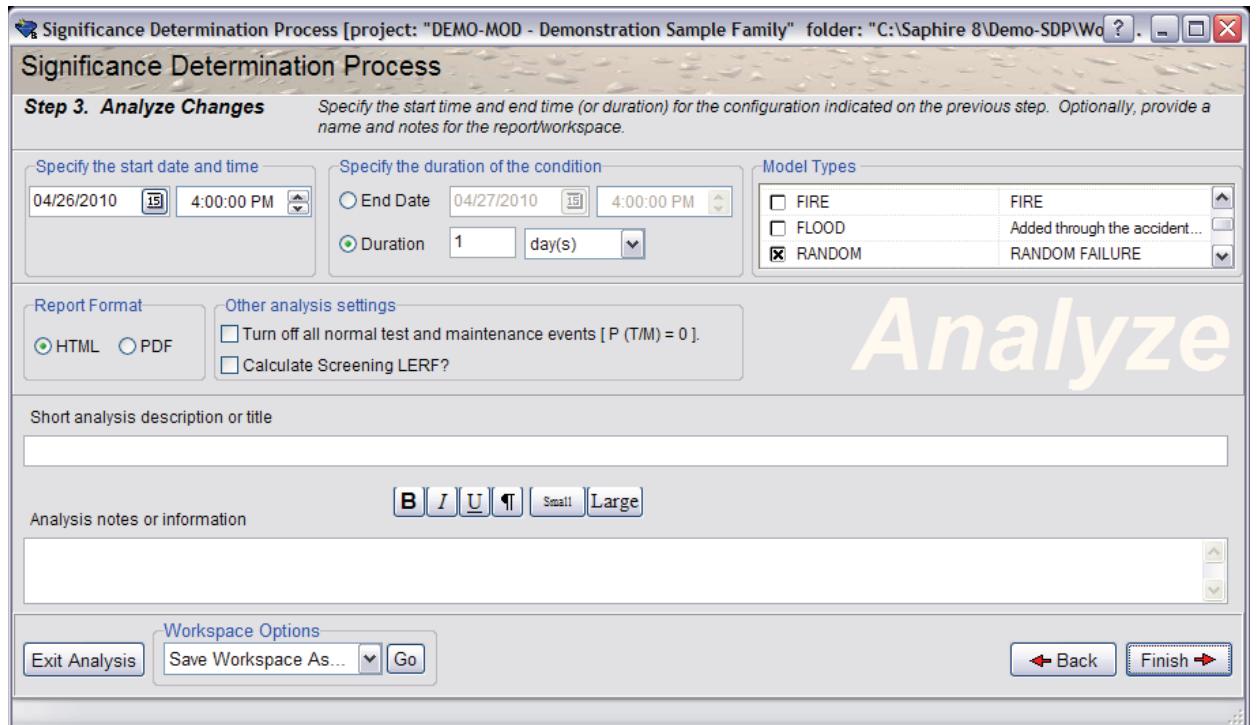

1. Start SAPHIRE and open the DEMO-SDP project.

2. Add a EPS-DGN-TM-A basic event with probability of 0.001. Modify EPS-DGN-TM-A categories to System=EPS, Component Type=DGN, Failure Mode = TM, Component ID = EPS-DGN-A
3. Double click on “New SDP...” option.
4. Click the EPS systems button. Check the Diesel Generator A component.
5. Click Next.
6. Change the Fails to Start failure mode to TRUE.
7. Verify that the TM failure mode changes to “not applicable.”

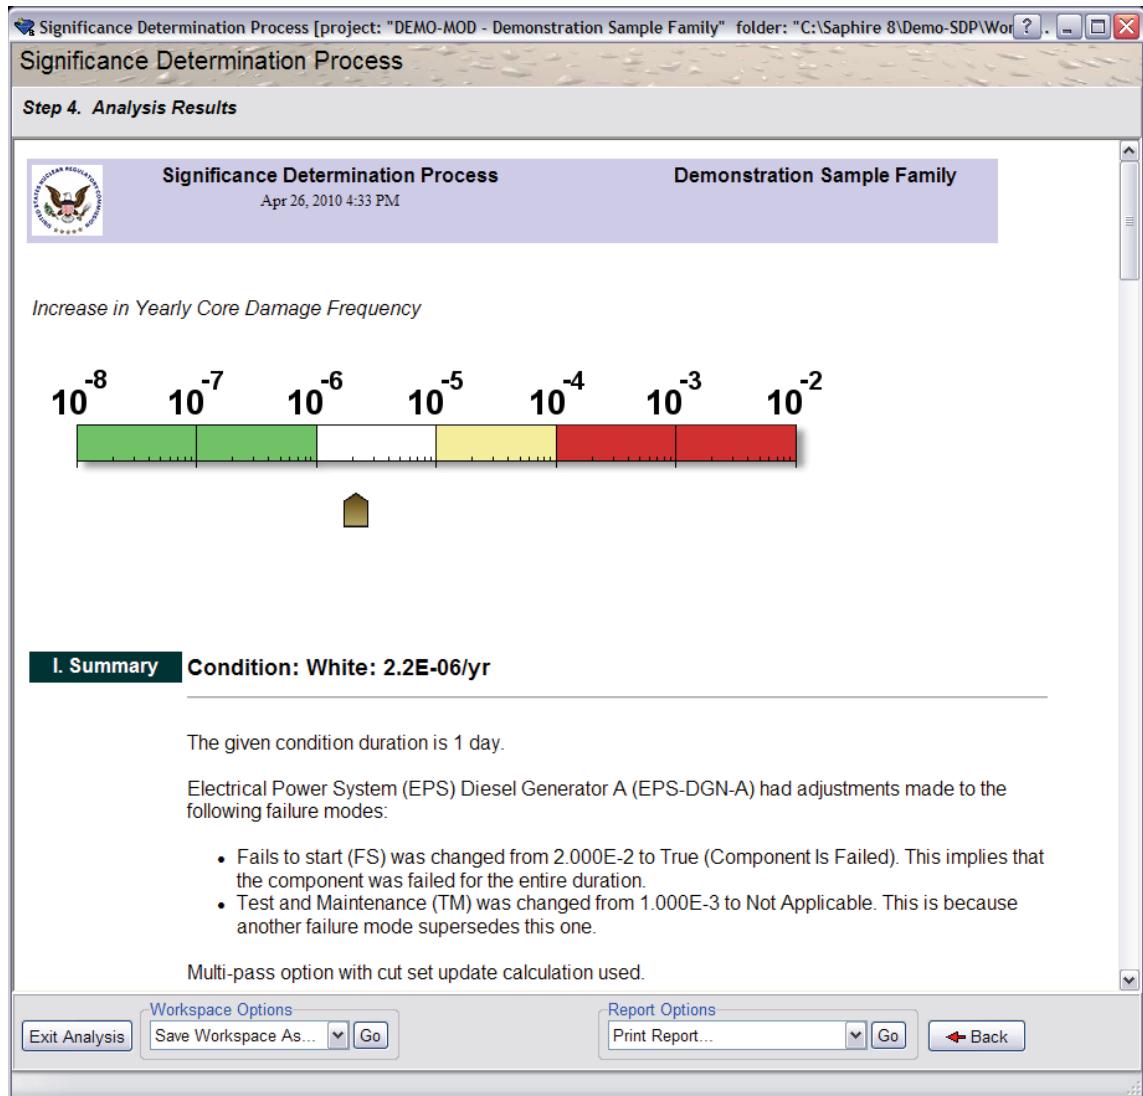

Verified? Yes.

8. Click Next.
9. Select a 1 day duration, leave the other options at their default values.

10. Click Finish. Click Ok.
11. Verify that the report indicates the Fails to Start (FS) failure mode set to TRUE and the Test and Maintenance (TM) set to not applicable.

Verified? Yes.

12. Under “Report Options” select “Advanced Report (99.9% of total). Click Go.
13. Verify that both the EPS-DGN-TM-A and EPS-DGN-CF-FS basic events are modified to reflect the fails to start that was seen for EPS DGN train A.

SDP Advanced Report (99.9%)

Significance Determination Process Advanced Report (99.9%)

Demonstration Sample Family

I. Assessment Summary

Duration:	1 day	Project:	Demonstration Sample Family
CCDP:	2.3E-6	Model Version:	0.0
CDP:	1.4E-7	Model Date:	--/--/----
Increase:	2.2E-6 /year	Saphire Version:	Version 8.0.6.6
Color:	White		

II. Changed Basic Events
Summary of Conditional Event Changes

Event	Event Description	Cond. Calc Type	Cond. Prob.	Nominal Calc. Type	Nominal Prob.
EPS-DGN-FS-A	Emergency diesel generator A	T	1.0E+0	1	2.0E-2
EPS-DGN-TM-A	Emergency diesel generator A	1	1.0E+0	1	1.0E-3
EPS-DGN-CF-FS	CCF OF EPS DGENs TO START	C	1.3E-2	C	2.6E-4

III. Sequence Summary

Print... **Save As...** **X Close**

The EPS-DGN-TM-A basic event should be set to a probability of 1.0.

The EPS-DGN-CF-FS basic event should be set to 1.31E-2 (from a nominal of 2.62E-4) which is effectively α_2 . See the screen below for the α_2 basic event.

Edit Basic Event - ZA-DGN-FS-02A02

Name ZA-DGN-FS-02A02 **Probability = 1.310E-02**

13.0 Test-104

SAPHIRE 8 Testing

Manual Testing to Augment the Automated Test Suite

April 26, 2010

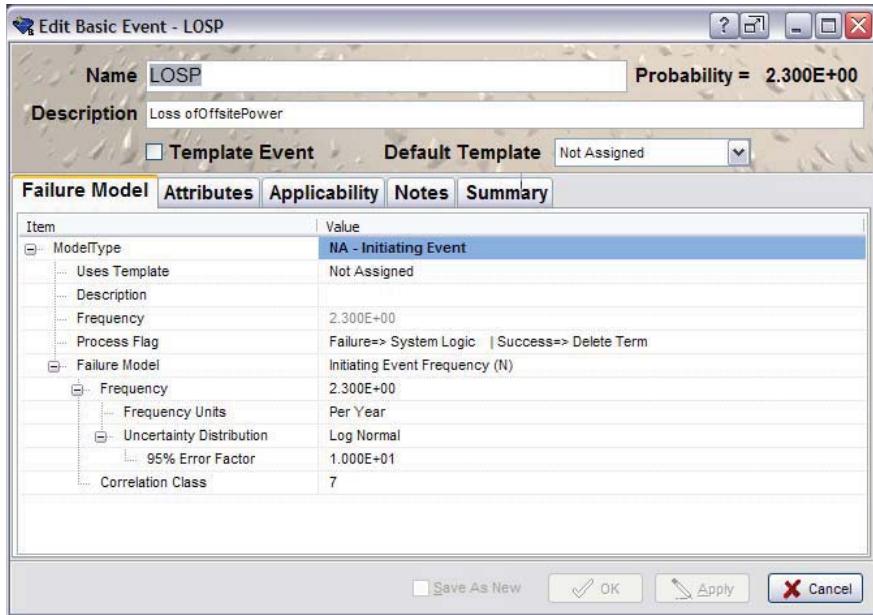

Tester: Curtis Smith

Version: 8.06.06

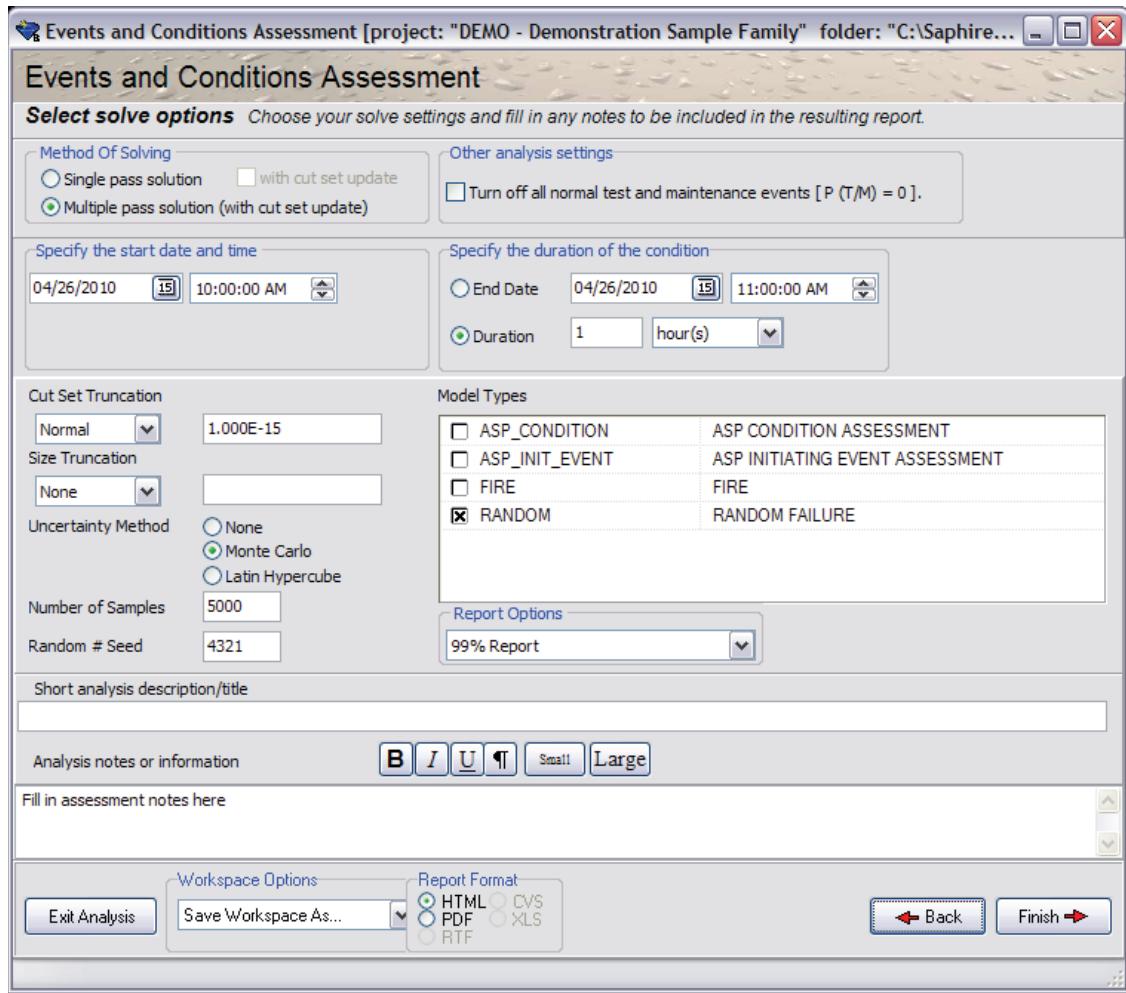

Test 104	Event and Condition Analysis uncertainty calculations	This test exercises Event and Condition Analysis workspace uncertainty calculations and corresponding graph of the Importance = CCDP - CDP. Results will be compared with results reviewed from a version 7 analysis done by a SPAR model developer at the INL.
----------	---	---

Steps:

1. Start SAPHIRE and open the DEMO project.
2. Select the Project → Modify option.
3. Select the SPAR tab, then click the “SPAR Model? check box. Click Ok.
4. Verify that the LOSP frequency is 2.3 per year (and default project units are per year).

5. Double click the “New ECA...” option.
6. Select the Condition Option, Duration of 1 hour.
7. Check the TANK basic event. Click Next.
8. Click the Edit button. Modify to the probability to 1.000E-6. Click Ok.
9. Click the Next button. Change the “Random # Seed” to 4321. Leave the other options at their default values.

10. Click Finish. Click Ok.
11. Verify the results against the equivalent SAPHIRE 7 results

SAPHIRE 8

CCDP

5%	Median	Point Estimate	Mean	95%	Seed	Sample Size	Method
1.188E-6	2.299E-5	1.375E-4	1.371E-4	5.036E-4	4321	5000	Monte Carlo

CDP

5%	Median	Point Estimate	Mean	95%	Seed	Sample Size	Method
1.188E-6	2.295E-5	1.374E-4	1.371E-4	5.036E-4	4321	5000	Monte Carlo

Importance

5%	Median	Point Estimate	Mean	95%	Seed	Sample Size	Method
4.625E-10	1.049E-8	5.400E-8	6.262E-8	2.566E-7	4321	5000	Monte Carlo

Verified? Yes (by hand). Note that the SAPHIRE 7 results do not appear to be correct.

Generating cut sets with C-CV-A set to TRUE gives a CDF (per year) of 5.01E-2 (both in SAPHIRE 7 and 8). We can use this to calculate the CCDP.

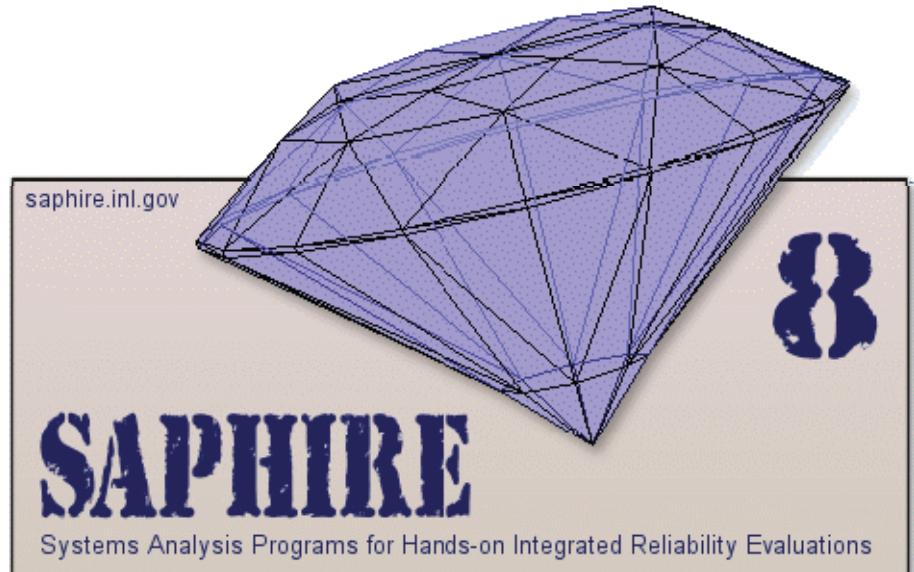

$$\begin{aligned}\text{CCDP} &= 1 - \exp(-\text{CDF} * (24 \text{ hours}/8760 \text{ hours per year})) \\ &= 1 - \exp(-5.01\text{E-}2 * 24/8760) \\ &= 1.37\text{E-}4\end{aligned}$$

This is the point estimate, which matches that given by SAPHIRE 8. SAPHIRE 7 is showing 6E-5 (for CCDP) which is too low by 24.

1. Introduction

The overall goal of conducting a SAPHIRE version 8 “Independent Verification and Validation” (IV&V) activity is to provide a process to support the Nuclear Regulatory Commission (NRC) in ensuring a high-quality software development process and product through a formal process.

Use of the NRC’s Standardized Plant Analysis Risk (SPAR) models may be required in some of the tests. *SPAR models are designated Official Use Only and are to be treated as not publically available.*

1.1. Purpose

The SAPHIRE team is improving the software development process by conducting IV&V activities. The SAPHIRE IV&V process echo’s the development process. IV&V is beneficial to the overall development process if it is conducted once the software code base is mature such that the verification takes place shortly prior to what the end users will see in a production version.

What is the definition of IV&V and why is it performed?

Normally, IV&V is the verification and validation of a software product by an organization that is both technically and managerially separate from the organization responsible for developing the product.

- Verification is the process that determines if a product meets its requirements (Are we building the right SAPHIRE product?).
- Validation is the process that determines if a product performs its intended activities (Are we building the SAPHIRE product right?).

In general, IV&V is part of the testing process. It should echo or adapt to the characteristics of the software development methodology being followed. Since SAPHIRE 8 is an ‘Object Oriented’ approach, each object needs to be examined as it moves through the phases of the development cycle.

Some of the high level benefits of performing IV&V include but are not limited to:

- Visibility into development
- Improved decision criteria
- Alternate technical source
- Reduced maintenance cost
- Reduced frequency of change
- Improved software performance
- Improved confidence in the reliability of the software
- Documents the compliance between the requirements specification and the code

Past SAPHIRE IV&V processes were conducted on IRRAS versions 4 and 5. SAPHIRE version 7 was not formally tested through an IV&V process due to the use of automated tests

(some of which replicate older IV&V tests) as part of the development process. These older IV&V processes and documents will be reviewed for applicability and insights as part of the initial phase of the SAPHIRE 8 IV&V team.

1.2. Objectives and Goals

SAPHIRE 8 is being developed with a phased or cyclic iterative rapid application development methodology. Due to this approach, a similar approach should be taken for the IV&V activities on each vital software object. IV&V and SQA activities occur throughout the entire development life cycle and therefore, will be required through the full development of SAPHIRE 8. Later phases of the software life cycle, the operation and maintenance phases, are not applicable in this effort since the IV&V is being done prior to releasing Version 8.

The IV&V plan is structured around NUREG/BR-0167, “Software Quality Assurance Program and Guidelines,” February 1993. The Nuclear Regulatory Research Office Instruction No.: PRM-12, “Software Quality Assurance for RES Sponsored Codes,” March 26, 2007 specifies that RES-sponsored software is to be evaluated against NUREG/BR-0167. Per the guidance in NUREG/BR-0167, SAPHIRE is classified as “Level 1.” Level 1 software corresponds to technical application software used in a safety decision.

Previous verification and validation of SAPHIRE have also utilized the IEEE Standard for Software Verification and Validation. The SAPHIRE testing, verification and validation (TV&V) process currently in place had also been compared to the IEEE standard. From this comparison, four key recommendations were developed:

1. Reach a consensus on the target software integrity level [1, 2, 3, or 4].
2. Create a formal Software Validation and Verification Plan document that describes which V&V activities will be performed, and which will not.
3. Utilize a functionally independent (from the developmental organization) V&V person(s) for at least some V&V functions.
4. Perform a V&V audit by a non-INL entity. This audit could be conducted once a year and could be performed by a NRC employee not directly associated with the SAPHIRE development project.

This plan is designed to satisfy recommendation 3. The SAPHIRE 8 IV&V team will be following this IV&V plan.

The IV&V plan follows the Table 1, “IV&V Tasks Based on NUREG/BR-0167” given at the end of this document. A checklist has been developed to implement the Table 1 tasks and products, and is attached. The checklist provides comprehensive coverage of NUREG/BR-0167 V&V activities. A comparison of the checklist to the NUREG/BR-0167 Table 3-1, “Verification and Validation Activities by Major Life Cycle Activity,” shows that V&V activities associated with Requirements Definition, Design, Implementation, Qualification Testing, and Installation and Acceptance Testing are planned to be checked. Since SAPHIRE 8 is not yet in maintenance or operations, the V&V activities are not yet applicable. However, if schedule and budget permit, the IV&V will also check on plans to maintain the software. In addition to the life cycle

phases given in NUREG/BR-0167 Table 3-1, the checklist covers the software project plan, project tracking and oversight, configuration management, and risk management which are included elsewhere in the NUREG. Furthermore, tasks and products associated with both NUREG/BR-0167 and IEEE STD 1012-2004 are included in this IV&V effort as shown in Table 1 of this plan. Therefore, this IV&V plan comprehensively covers NUREG/BR-0167 and includes some tasks and products associated with the IEEE STD 1012-2004.

Since the testing phase comes after the other phases, it is important that the IV&V remain within schedule and budget to ensure the testing activities specified in the plan will be completed. Potential deviations from the plan will be brought to the NRC's attention. Additional activities may be pursued if schedule and budget permits.

The IV&V is complemented by other V&V activities. The NRC's internal peer review will review requirements and design documents, and will test a beta version of the software. In addition, beta testers are testing the software and NRC audits are performed against NUREG/BR-0167.

The comparison report found that SAPHIRE TV&V practices most closely satisfied the IEEE standard's Level 1 tier, and in some cases the practices were felt to match higher level tiers.

The actual integrity level of a software project should be decided upon via mutual agreement between the customer and the code developers. The IEEE V&V describes a set of life cycle processes (e.g., management, development, maintenance) to which the standard applies. It notes that only those life cycle processes used by a software project need comply with the standard. Table 1 below briefly describes the life cycle processes defined in the IEEE standard, and their applicability to SAPHIRE project.

The IEEE development portion of the IEEE life cycle process closely corresponds to the NUREG/BR-0167 software life cycle description. This NUREG recognizes that each software project must tailor the life cycle processes to fit the scope of effort, using cost-effective management and judgment.

Appendix B - Table of IEEE standard life cycle and applicability to the SAPHIRE development process

Life cycle process	Description	Used by SAPHIRE?
Management	Overall handling of the software project	Yes
Acquisition	Request for proposal; selection of a supplier; acceptance of software product	Limited applicability
Supply	Proposal preparation; development of project plans; delivery of product	Limited applicability
Development	Requirements analysis; design; coding; integration; testing; installation and acceptance	Yes
Operation	Operation of the product and support to users	Yes
Maintenance	Modifications due to problems or need for improvement	Yes

Appendix B - Table of IEEE software integrity levels

Error Consequence	Likelihood of occurrence of an operating state that contributes to the error			
	Reasonable	Probable	Occasional	Infrequent
Catastrophic	4	4	4 or 3	3
Critical	4	4 or 3	3	2 or 1
Marginal	3	3 or 2	2 or 1	1
Negligible	2	2 or 1	1	1

Appendix B - Table of IEEE definitions of consequence

Consequence	Definitions
Catastrophic	Loss of human life, complete mission failure, loss of system security and safety, or extensive financial or social loss.
Critical	Major and permanent injury, partial loss of mission, major system damage, or major financial or social loss.
Marginal	Severe injury or illness, degradation or secondary mission, or some financial or social loss.
Negligible	Minor injury or illness, minor impact on system performance, or operator inconvenience.

SAPHIRE is at IEEE integrity level “1”, the lowest. If one examines the IEEE software integrity level table, SAPHIRE can be assigned an IEEE-1012 level of 1 and still be critical to supporting the decision-making process. Because SAPHIRE is not the only tool used to support the decision-making process it should not be classified as “Catastrophic.” Furthermore, no metrics to support an IEEE-1012 classification higher than a “1” currently exist. The results of any calculation information from SAPHIRE depend largely on how a model has been implemented by a user. A process exists to analyze all errors reported by the user community.

The IEEE standard levels are based on considerations of 1) the likelihood of occurrence of an operating state that contributes to the error, and 2) error consequence. IV&V activities in this plan which correspond to the IEEE software standard should be done at the level 1 tier. More rigorous reviews may be considered at higher levels for life cycle activities such as “Implementation” and/or “Test” if the schedule and budget permit. Therefore, the IV&V plan, while based on the governing document, NUREG/BR-0167, also considers how the review activities and products correspond to the current IEEE software standard.

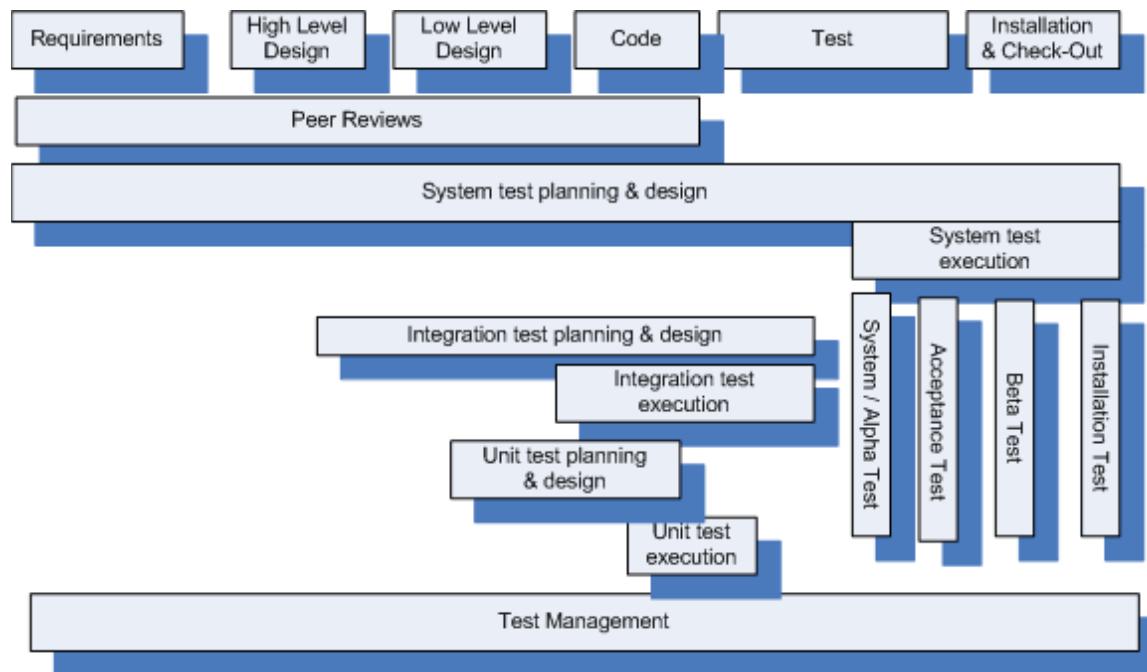

The NUREG/BR-0167 also requires an IV&V test report upon completion of the development efforts. For meeting NUREG/BR-0167 requirements, there also needs to be an SQA interface with the development team. This individual will also interface with the IV&V representative.

Each developer is responsible for ensuring that the code they create has met the criteria discussed in the NUREG/BR-0167. According to the contract that the INL holds with the NRC, SAPHIRE 8 is supposed to be brought up to "state of the art" software. This means that activities that are called out in the NUREG/BR-0167 not currently being performed by the developers should be modified so that they are brought in compliance. If required, additional support tasks may need to be incorporated into the development process. Some tasks are the responsibility of the developers to incorporate into their code. Other tasks could be done by support personnel such as a software technician. A subject matter expert familiar with PRA modeling techniques needs to be available for consultation. Due to finite programmer resources supporting the SAPHIRE

effort, automated analysis tools may be purchased to support QA and IV&V activities and improve the analysis process.

A distinction needs to be made for clarification of IV&V activities. Verification and validation activities encompass all activities that the developers and testers, software quality assurance representatives and independent auditors perform to ensure a quality software application (see Appendix B - Figure 1 for an overview of typical testing activities). Each participant has specific roles and responsibilities based on the function being performed by the individuals. In this plan, it was attempted to delineate the expected inputs and outputs between the developers and SAPHIRE 8 team members as compared to the IV&V team members.

For each functional area, the tasks outlined in the NUREG/BR-0167 Software Quality Assurance Program and Guidelines will be noted. If, upon review, an item is found to be lacking, an action plan will be implemented to take corrective action and monitored until corrected or explained. Not every item listed will be applicable to each major functional area. Further, not all comments will need to be resolved prior to a general release of SAPHIRE 8 – minor issues and recommendations may be addressed during a later release of the software. The NRC will make these determinations.

Appendix B - Figure 1. General Testing Activities and the Software Life Cycle.

Figure 1 maps the basic phases of software development and the types of testing possible during the life cycle of a software application development effort. The SAPHIRE 8 development team is not performing every type of test that is indicated in the figure. The SAPHIRE team has selected certain test phases as the most effective approached to the testing effort. See Table 1 IV&V Tasks Based on NUREG/BR-0167 for the specific test phases to be performed. The IV&V Team will witness all or a portion of the tests and inspect the results of the tests performed by the development team. Additional analysis and indication of needed test effort may be required by the IV&V Team as part of the overall verification and validation effort and to provide customer confidence in the new software release. See Table 1 IV&V Tasks Based on

NUREG/BR-0167 for a break out of specific products required for by the development team and the IV&V team to support the SAPHIRE 8 V&V effort .

2. Referenced Documents and Sources

Applicable sources of information that will be available to the IV&V team include:

- Access to personnel staffing the development team
- Source code stored in the revision control system
- Beta test feedback stored in the change log system
- NRC Form 173s
- NRC Form 189s
- General INL project information (e.g., monthly reports)
- Automated tests and QA results
- SAPHIRE Verification and Validation Plan, Volumes 1 and 2
- Module design documentation
- SAPHIRE 8 New Features and Capabilities document
- User feedback checklists
- Design review documentation
- Past IV&V reports, including prioritization of key features
- SAPHIRE 8 Source code.
- SAPHIRE 8 Software Requirements, Design and Test documentation
- NUREG/BR-0167 Software Quality Assurance Program and Guidelines
- NUREG/BR-0167 SQA Audit Check Sheet
- IEEE-1012 2004 Standard
- SAPHIRE Modeling & Analysis Software Compliance to Requirements - Assessment Checklist

3. IV&V Overview

This section discusses the project organization, schedules, resource allocation and tools, techniques, and methodologies.

3.1. Organization of IV&V Activities

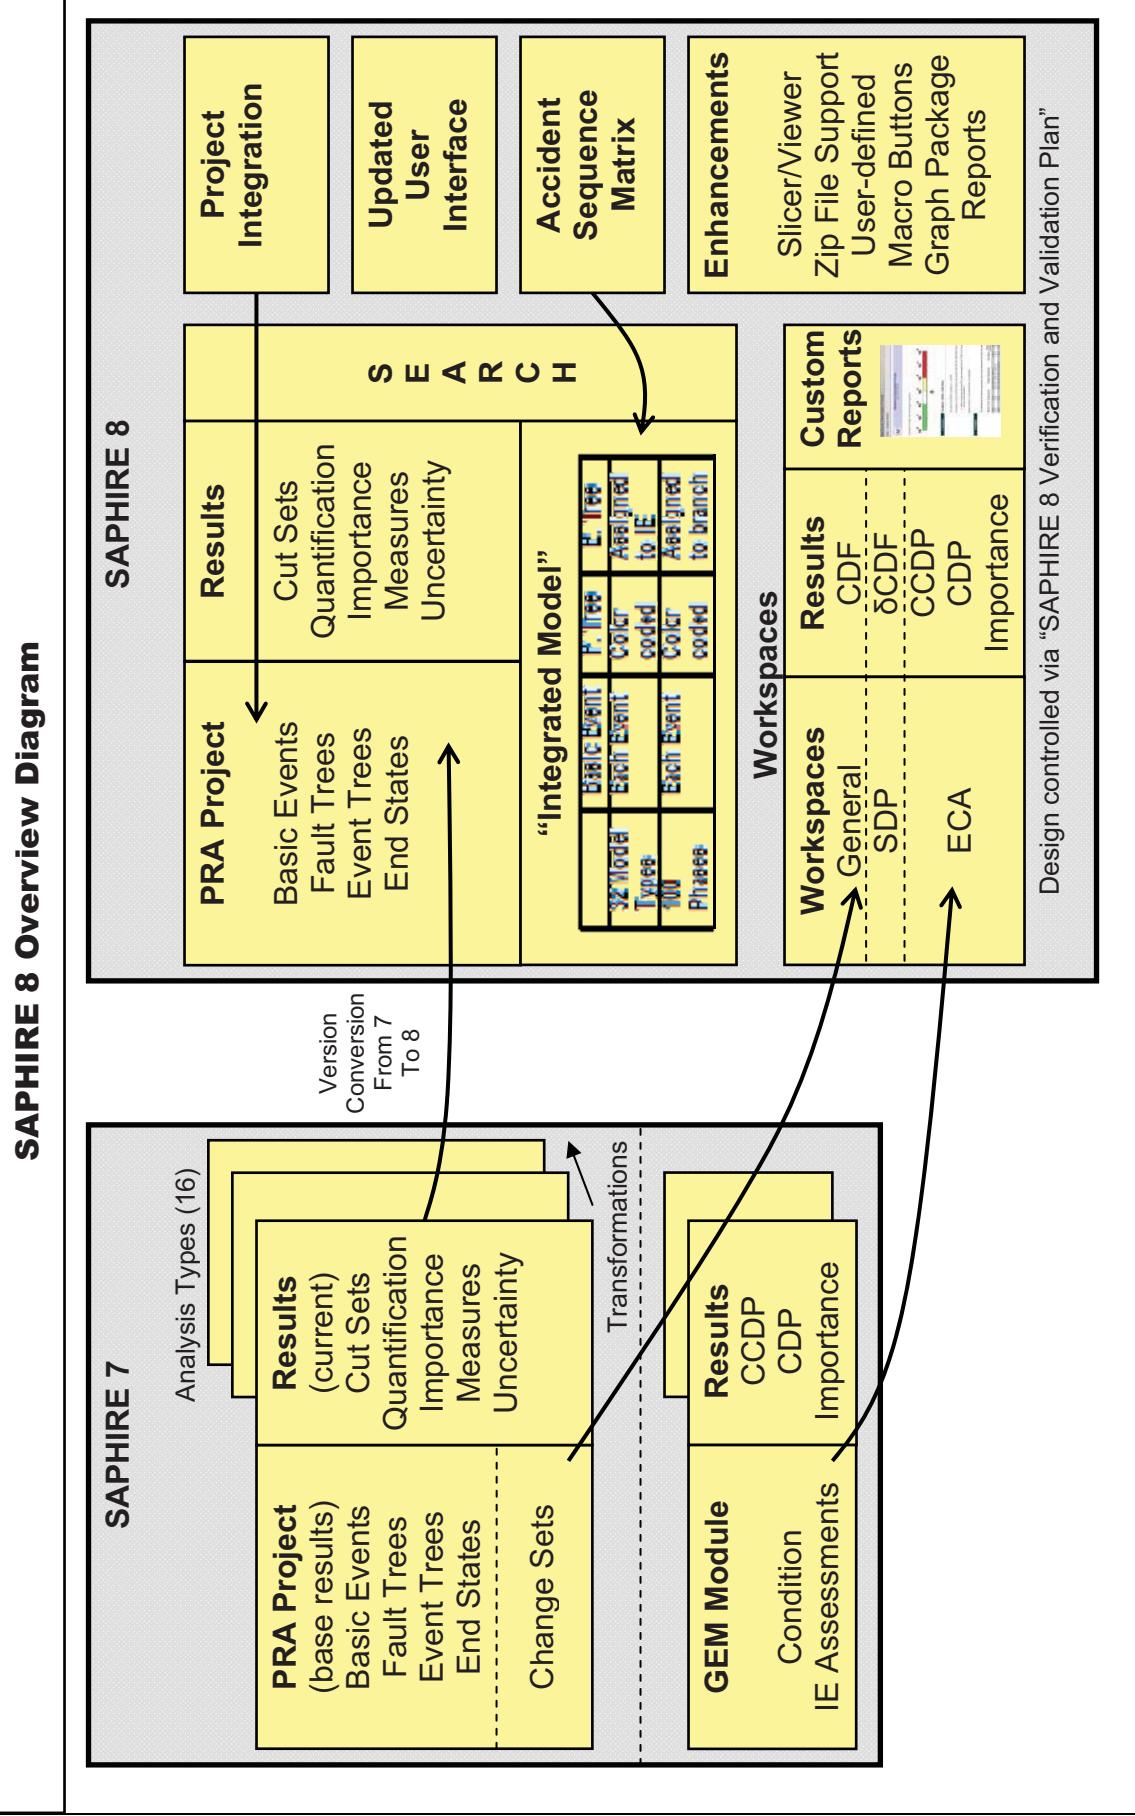

The Table 1, “IV&V Tasks Based on NUREG/BR-0167,” provides the list of activities to be performed by life cycle phase. As can be seen in this table, certain activities also correspond to activities in the IEEE software standard. The checklist developed for the NRC audits of SAPHIRE can be found in the Revision Control System (RCS). This checklist may be useful for the IV&V team to consult, but does not replace the activities and products given in the table which are to be completed.

The key functional areas of focus for the IV&V team are shown in Appendix B - Figure 2. The team, which will be selected during the initial phase of the IV&V, will focus on vital aspects of these key areas. Vital aspects, new or carried over from the previous SAPHIRE version 7, will be included in the IV&V. Non-vital aspects should also be included in the scope of the IV&V; however, the focus should be on the vital aspects.¹

Note that the team members will have a variety of backgrounds (e.g., QA, PRA). The SAPHIRE 8 IV&V team is looking for "functional" independence (from the SAPHIRE development project) for team members. Consequently, INL staff that work on other NRC projects or that have used SAPHIRE in the past can be considered for the IV&V team.

¹ For the V&V of SAPHIRE Version 5 (as described in NUREG/CR-6116 Volume 9), a “vital feature” was defined as those that (a) affected the results of a PRA and (b) are essential for completing a PRA analysis.

Appendix B - Figure 2. Key Elements of SAPHIRE Version 8 Software and Contrast with Version 7.

The SAPHIRE 8 graphical user interface (GUI) is implemented using a modern Windows-design environment which allows for multiple, resizable forms. Functionality for the previous GEM and SAPHIRE interfaces will be accessed from within SAPHIRE 8. The GUI is coded in Delphi and object Pascal.

The GUI has a top-level main form that allows the user to choose between model development or to perform an analysis. Under the model development option, the user will be able to select a fault tree logic diagram, an event tree logic diagram, basic events, end states, or a project workspace.

When a user performs an analysis, a copy of the relational database files are created and stored in a unique workspace folder in the workspaces directory. Once the analysis is complete (i.e., saved) the relational database files will be compressed into a single .zip file. The compressed file may be shared with another user if desired. The uncompressed file may be opened at a later time and the database reviewed to inspect the analysis. Currently, three types of workspaces are available: General, SDP, and Events and Condition Assessment (ECA). The analysis process, reports, and results are customized specific to each type of workspace.

A variety of enhancements have been implemented in SAPHIRE 8. For example, SAPHIRE has a more powerful cut set slicer, supports compressed files, allows users to assign macros to on-screen buttons, contains a better graphing package, and uses HTML-based report templates.

Analysis improvements have been implemented. In SAPHIRE 7, different “types” of models were stored in select analysis type parts of the database such that aggregate results were not available. In SAPHIRE 8, the user may define up to 32 “model types” (e.g., full power internal events, low power internal events, seismic events, and flooding events) such that this information is shareable within a single project enabling aggregate (or single if needed) risk assessment.

To support the development of “integrated models” (models with multiple model types), features such as an “accident sequence matrix” are used to enable the development of external events models via a semi-automated process. The fault tree model editor has been designed to be aware of the different model types and will show the user which events (and their respective probabilities) apply to the individual model types.

In SAPHIRE 8, the user now has the ability to search (in text fields such as names and descriptions) on objects in the project database, thereby facilitating a way to quickly find information in large project.

3.2. Schedule of Activities

The IV&V functions can commence upon receipt of funding and will last approximately eight months. An approximate schedule is presented below in Schedule and Products, assuming a March start (a later start will push the timetable back by the delay time). For example, the first area targeted will be the core functionality of model construction and examination of the updated and existing SAPHIRE 8 capabilities. This includes construction of Basic Events, Fault Trees, Event Trees, and End States. Since this is the core of the SAPHIRE application and will support

any additional functionality, performance of SQA and IV&V as early as possible will insure a solid review for future use of the software.

Key Areas

1. Model Construction
2. Standard Analysis Interface
3. Workspace Analysis Interfaces
4. PRA Quantification
5. General Support Features and Capabilities

Schedule and Products

T0 – IV&V team selection and finalize IV&V plan, including prioritization of activities. Final test plan must be approved by the NRC Project Manager.

Period: March, 2009

Product: IV&V plan including comments from IV&V team

T1 – Requirements, Design, Implementation Review, IV&V assessment

Period: April – July, 2009

Products: Monthly progress reports; IV&V products in the table; draft report sections for final report. Checklist review (e.g., requirements, design, implementation, etc.), IV&V assessment.

Note: Some IV&V observation/evaluation/testing can begin.

- Checkpoint: NRC assesses progress and determines if additional IV&V time is needed

Milestone: Version 8 beta 4 ready for IV&V testing completed by end of June, 2009. NRC will review this version to ensure it is ready for IV&V testing prior to it being provided to the IV&V team in July. This version will not include algorithmic improvements for SAPHIRE calculation speed.

T2 – Test, Installation and Checkout

Period: August 2009 – January 2010

Products: Monthly progress reports; IV&V products in the table; draft report sections for final report.

- Checkpoint: NRC assesses progress and determines if additional IV&V time is needed

Product: Final Report – January 2010 or later as specified by NRC Project Manager based on NRC assessments. Checklist review (e.g., testing, installation and checkout, etc.)

Note: IV&V observation/evaluation/testing to be completed. In addition, the development team is utilizing a rapid application, spiral methodology approach for software development.

Therefore some criteria in the checklist may need to be reassessed and reviewed to complete any remaining life cycle phases.

Milestone; Version 8 beta 5 ready for NRC review by end of January 1010

T3 – SAPHIRE Development Team Finalizes Version 8 for release

Period: February, 2010 – March, 2010

Management

NRC approval is necessary for

- the final IV&V plan
- changes in scope, level of effort, or schedule
- acceptance test plan developed by the development team for the vital and non-vital aspects prior to beginning the test phase (T2)
- determining which major IV&V team recommendations to resolve before releasing Version 8 (it is recognized that not all recommendations will need NRC approval for resolution)

Detailed monthly progress reports will be provided to the NRC Project Manager and Technical Monitor.

The INL SAPHIRE development team will respond to IV&V findings, as appropriate, as the IV&V review is being done. Additional time (T3) will be available to the SAPHIRE development team after completion of the Final Report to allow the team to finalize Version 8 for release.

3.3. Resource Summary

The IV&V personnel will consist of one “Full Time Employee” assigned to act as the IV&V Lead. This person is an experienced developer or QA engineer that has not developed code specifically for SAPHIRE 8.

Two additional ½ time support persons on an as needed basis for performing some the IV&V activities. This may include but is not limited to subject matter experts, software technicians or student interns. All personnel will be required to read this document and be familiar with the software development methodology. These roles may last for a few days or a few weeks depending on the need. A resume of all personnel utilized in this effort will be on file.

All test equipment needed currently resides at the INL.

3.4. Tools, Techniques and Methodologies

The tools to be utilized in the SAPHIRE 8 IV&V process are:

Windows XP Professional Desktop computer with all current security patches
SAPHIRE 8 executable installed on the Windows computer

Component Software Revision Control Software tool (CS-RCS)
SAPHIRE automated test suite
Code Healer Software Analysis Tool Version 2.5 SOCK software
Delphi 2007 Software Development Environment
MS Word Processor
SPAR models
Delphi and Modula-2 Coding Standards

Techniques and methodologies will include code review of randomly chosen source code files against the NUREG/BR-0167 standard, Code Healer analysis of randomly chosen sections of the software, tracing of randomly chosen functional areas from requirements to final test results. Possible auditing of any and all documentation pertaining to design reviews, software change processes or other pertinent SAPHIRE 8 processes and products.

4. Completion and Deliverables for the IV&V Activities

The basic high level functional areas will be examined in the order listed. This will echo the application development and provide immediate feedback while the code is still being developed and tested; and provide a solid basis for further interface and development for the next iterative cycle. See Table 1 for the high level focus areas. For the high level areas, the IV&V team will be reviewing and testing as described in the NUREG/BR-0167 and IEEE STD 1012-2004 (IEEE STD 1024-1998 has been superseded) as a secondary reference where applicable. See Section 3.2 for the high level breakdown of the SAPHIRE 8 IV&V focus.

For each functional area, the tasks outlined in the NUREG/BR-0167 Software Quality Assurance Program and Guidelines will be accounted for. If upon review an item is found to be lacking, an action plan will be implemented to take corrective action and monitored until corrected or explained. Not every item listed will be applicable to each major functional area.

Table 1 lists all the expected tasks and deliverables to support this activity. Since the IV&V echoes the development process, as each vital feature for key areas are complete, the corresponding IV&V activities should commence. If the development is delayed, the IV&V activities must be delayed as well.

The key deliverable will be the final IV&V report listing the results of the IV&V process. This report will provide input to the SAPHIRE developers in order to focus future software development. This report will focus on what modifications should be considered in order to ensure SAPHIRE Version 8 is a quality product. The NRC will review these suggestions and, in conjunction with INL feedback, prioritize the suggestions for resolution. An overview of the IV&V process and results will also be summarized as a chapter in the SAPHIRE SVVP document.

4.1 Final Report Format

For each IV&V Review Area evaluated, the IV&V Review Report should contain the status of the SAPHIRE 8 Project, including any pertinent historical background information. The report should also contain a detailed analysis of each applicable IV&V Review Area, which answers at least the following questions:

- What are the current processes, procedures, practices and technology?
- What is good about the current processes, procedures, practices and technology?
- What about the current processes, procedures, practices, and technology needs improvement?
- What are the test results and insights?
- Is the project documentation accurate and up-to-date?
- What deviations from the IV&V plan exist and are they reported?

Here are the sections that will be presented in the SAPHIRE 8 Software Independent Verification and Validation Review Report

- Section 1 Executive Summary
- Section 2 Background Information
- Section 3 Project Summary
- Section 4 Summary of Findings
- Section 5 Summary of Analysis
- Section 6 Summary of Recommendations
- Section 7 Summary of Best Practices
- Section 8 Summary of Lessons Learned
- Attachment 1: List of Personnel Contacted
- Attachment 2: List of Documents Reviewed
- Attachment 3: List of Software Test Tools and Tool Descriptions
- Attachment 4: Detailed Findings and Recommendations Table
- Attachment 5: Project Best Practices
- Attachment 6: Project Lessons Learned

Note – IV&V will generate independent tests and review developer test processes, test suite , and test results as specified in this plan.

Appendix B - Table 1 IV&V Tasks Based on NUREG/BR-0167

Life cycle Phase	Tasks performed by IV&V based on Developer Requirements	Inputs to IV&V from Development Team	IV&V Products
Project Plan	Project Plan - Compliance to NUREG/BR-0167 ₁	• SAPHIRE 8 Project Plan ₁	Results of document review ₁

SAPHIRE Modeling & Analysis Software Compliance to Requirements - Assessment Checklist

The following checklist items are provided at a level of rigor that is intended to:

- 1) Provide sufficient information to NRC for audit purposes.
- 2) Update artifacts to begin a path forward for further improvements to meet good software engineering practices commensurate with NRC and industry standards.
- 3) Conduct IV&V in a cooperative environment with developers. It is not the intent that IV&V be conducted in an “adversarial” environment. IV&V and the developers must work as a team to be successful. Should issues arise that cannot be resolved between IV&V and the developer, the issue(s) can either be resolved by the NRC sponsor or identified in the checklist with developer and IV&V differences addressed in the comments section of the checklist.
- 4) Identify the IV&V test effort. IV&V will **not** conduct independent testing and also will evaluate and observe the developer’s tests to ensure they are complete and accurate and that the test processes are met according to the approved documentation. The applicable IEEE integrity level is level 1; however, the IV&V may consider IEEE testing activities (or other activities) at a greater level given the schedule and budget constraints.
- 5) The checklist comprehensively covers NUREG/BR-0167. Some tasks performed in a “full-up” IV&V effort as identified in industry standards, such as IEEE, will not be performed. IV&V tasks will be identified in the IV&V Plan and developed in a coordinated effort with the developer and the sponsor
- 6) Only those checklist items that are applicable (as agreed between the developer, sponsor, and IV&V) will be evaluated. This checklist is only a guide and some of the checklist items may be N/A. However, during the assessment process, checklist items may precipitate additional items that will be incorporated into this checklist. Checklist items are also prioritized to help meet schedule and budget constraints.
- 7) Provide information in the comments for EVERY checklist item. Comments must identify the location (e.g., RCS) for criteria that “Pass” for use as objective evidence of the review. The intent for using the checklist is not only to identify issues (i.e., “Fail”) but also any “exceptional” practices. Explanations for N/A criteria must also be identified.
- 8) Each of the criteria in the checklist is prioritized. High priority is “1”, medium priority is “2”, and low priority is “3”

This checklist does not require that the assessment items be conducted as provided in the order below.

SAPHIRE Modeling & Analysis Software

Compliance to Requirements - Assessment Checklist

SOFTWARE REQUIREMENTS		
It is assumed that shall and will are requirement identifications whereas should and would are “statements of fact” and not considered “testable” requirements.		
Criteria Priority: 1	Does the Requirements Document identify requirements that are uniquely identified, testable, and traceable through the software life cycle? NUREG/BR-0167 Section 4.3	
Pass	Comments	
Fail		
N/A		
Criteria Priority: 1	Does the Requirements Document address the functions that the software is to perform and only what is to be performed? NUREG/BR-0167 Section 4.3.1, Software Engineering Practices	
Pass	Comments	
Fail		
N/A		
Criteria Priority: 1	Does the Requirements Document address time-related requirements of software operation such as speed, response time, and/or other performance requirements? NUREG/BR-0167 Section 4.3.2	
Pass	Comments	
Fail		
N/A		
Criteria Priority: 3	Does the Requirements Document address constraints imposed on implementation activities, including but not limited to hardware platform and programming language? NUREG/BR-0167 Section 4.3.3	
Pass	Comments	
Fail		
N/A		
Criteria Priority: 2	Does the Requirements Document address attributes of the software, such as portability, access controls, property of an object, element, or file? NUREG/BR-0167 Section 4.3.3 – Best Practices	
Pass	Comments	
Fail		
N/A		
Criteria Priority: 2	Does the Requirements Document identify external interfaces – interactions/communications with people, hardware, and other software? NOTE: Interfaces may be identified in a separate document, e.g., an Interface Requirements Specification. NUREG/BR-0167 Section 4.3.3	
Pass	Comments	
Fail		
N/A		
Criteria Priority: 1	Does the Requirements Document identify internal interfaces – interactions/communications which exist between separate software components and provide a programmatic mechanism by which these components can communicate? NOTE: Interfaces may be identified in a separate document, e.g., an Interface Requirements Specification. NUREG/BR-0167 Section 2.2, Section 3.2.2.2 – Section 3.2.4.1 -Software Best Practices	
Pass	Comments	
Fail		
N/A		
Criteria	Does the Requirements Document identify assumptions, constraints, or dependencies
