1.0 INTRODUCTION

The Toxic Substances Control Act, 40 CFR 761.65(a)(1) provides an exemption from the one year storage time limit for PCB/radioactive waste. PCB/radioactive waste may exceed the one year time limit provided that the provisions at 40 CFR 761.65(a)(2)(ii) and 40 CFR 761.65(a)(2)(iii) are followed. These two subsections require, (ii) "A written record documenting all continuing attempts to secure disposal is maintained until the waste is disposed of" and (iii) "The written record required by subsection (ii) of this section is available for inspection or submission if requested by EPA."

EPA Region 10 has requested the Department of Energy (DOE) to submit an inventory of radioactive-contaminated PCB waste in storage at the Idaho National Laboratory (INL) for the previous calendar year.

The annual inventory is separated into two parts, INL without Advanced Mixed Waste Treatment Project (AMWTP) (this includes Battelle Energy Alliance, LLC, CH2M-WG Idaho, LLC, and the Naval Reactors Facility), and AMWTP.

2.0 CONTINUING ATTEMPTS TO SECURE DISPOSAL OF RADIOACTIVE-CONTAMINATED PCB WASTE

The following summarizes the INL and AMWTP continuing endeavors to secure disposal of PCB/Radioactive waste:

1. A total of 17 items or containers (excluding AMWTP) totaling approximately 29,672 kg of radioactively contaminated PCBs were shipped for disposal, or disposed during the calendar year 2014. Facilities used for disposal included a TSCA permitted incinerator capable of burning radioactively contaminated PCB liquids and Resource Conservation and Recovery Act (RCRA) permitted Subtitle C facilities capable of accepting radioactively contaminated PCB solids.
2. A total of 1082 items or containers totaling approximately 536,002 kg of radioactively contaminated PCBs from the AMWTP were shipped for disposal, or disposed during calendar year 2014. Facilities used for disposal included a TSCA permitted incinerator capable of burning radioactively contaminated PCB liquids; RCRA permitted subtitle C facilities capable of accepting radioactively contaminated PCB solids and the Waste Isolation Pilot Plant (WIPP).

In February 2014, the Department of Energy suspended operations at the Waste Isolation Pilot Plant (WIPP) following a salt truck fire and a subsequent radiological event. WIPP is the nation's only repository for the disposal of transuranic (TRU) contaminated waste. Since there is no other disposal pathway for TRU-contaminated PCB waste, shipments from the INL Site of such waste were subsequently suspended. The WIPP is identified to resume receipt and disposal operations (in the WIPP Recovery Plan schedule issued on September 30, 2014) for the first quarter of calendar year 2016.

Total Number of Items: 12435

Total Weight : 2,242,818 1,824,677

Total Weight. Weights are rounded to the nearest kilogram, except where the container weight is less than 0.5Kg

Note 1: Container description updated from the previous report.

Note 2: Container net weight changed from the previous report.

Note 3: Container gross weight changed from the previous report.

Note 4: Date of removal from service was corrected from the date listed on the previous report to the oldest known date.

Note 5: The removal-from-service date listed on the shipping manifest for this container was incorrect. However, the removal-from-service date listed in this report for this container is correct.

Note 6: The waste in this container is comprised of secondary waste resulting from the repackaging operations performed in 2014 by the Accelerated Retrieval Project at the RWMC.

Note 7: This container resulted from sludge repackaging operations performed in 2014 by the Accelerated Retrieval Project at RMWC.

Note 8: Identified as a PCB Container during characterization performed during 2014.

Note 9: Identified as a PCB Container during characterization performed prior to 2014, but was inadvertently omitted from the previous report.

Note 10: PCB Container contains waste generated in 2014 from the management of legacy PCB Wastes.

Note 11: Container was retrieved from the waste stack in 2014. Based on Acceptable Knowledge, a conservative removal-from-service date of 12/27/1971 was applied.

Note 12: Container was retrieved from the waste stack in 2014. Based on a lack of Acceptable Knowledge, the date of retrieval was applied as the removal-from-service date.

Note 13: Date of removal from service was taken from the original container during a repackaging operation performed in 2014.

NOTE: All of the above notes may not apply to this report.

Note 5: The removal-from-service date listed on the shipping manifest for this container was incorrect. However, the removal-from-service date listed in this report for this container is correct.

Note 6: The waste in this container is comprised of secondary waste resulting from the repackaging operations performed in 2014 by the Accelerated Retrieval Project at the RWMC.

Note 7: This container resulted from sludge repackaging operations performed in 2014 by the Accelerated Retrieval Project at RWMC.

Note 8: Identified as a PCB Container during characterization performed during 2014.

Note 9: Identified as a PCB Container during characterization performed prior to 2014, but was inadvertently omitted from the previous report.

Note 10: PCB Container contains waste generated in 2014 from the management of legacy PCB Wastes.

Note 11: Container was retrieved from the waste stack in 2014. Based on Acceptable Knowledge, a conservative removal-from-service date of 12/27/1971 was applied.

Note 12: Container was retrieved from the waste stack in 2014. Based on a lack of Acceptable Knowledge, the date of retrieval was applied as the removal-from-service date.

Note 13: Date of removal from service was taken from the original container during a repackaging operation performed in 2014.

NOTE: All of the above notes may not apply to this report.

Note 1: Repackaged drums of organic sludge ID-RF-S3114 from AMWTP that does not correlate to one specific parent container (reported in the 2013 AMWTP report) due to comingling of sludge from numerous parent containers during processing. Repackaged drums returned to AMWTP during 2014.

Note 2: Repackaged drums of organic sludge ID-RF-S3114 from AMWTP that does not correlate to one specific parent container due to comingling of sludge from numerous parent containers during processing. Container did not appear in either the 2013 AMWTP or INL reports because the container was retrieved, overpacked and transferred to CWI for processing during 2014 by AMWTP, processed by CWI and returned repackaged drum to AMWTP during 2014.
