# Source Term Modeling for Advanced Gas Micro-Reactors

Pacific Basin Nuclear Conference

Battelle Energy Alliance manages INL for the  
U.S. Department of Energy's Office of Nuclear Energy

Idaho National Laboratory

# TRi-structural ISOtropic (TRISO) fuel to be used in advanced gas micro-reactors.

## Particle Structure:

- Kernel
- Buffer
- Inner Pyrolytic Carbon (IPyC)
- Silicon Carbide (SiC)
- Outer Pyrolytic Carbon (OPyC)

# A mechanistic analysis that uses conservative assumptions to predict fission product release.

- Expanding model from 1991 for New Production Reactor – Modular High-Temperature Gas-Cooled Reactor (NPR-MHTGR) program.<sup>1</sup>
  - Multi-Node
  - AGR Release Data
- Uniaxial, radial diffusion.
- Model particle as kernel and SiC layer.
- Assume the broken particles occur on the edge of compact.

1. EGG-NPR-8522, "6.0 Safety and Environmental Assessment," March 1991.

## Phenomena Modeled in TRISOATOPS

\*Figure by David Petti

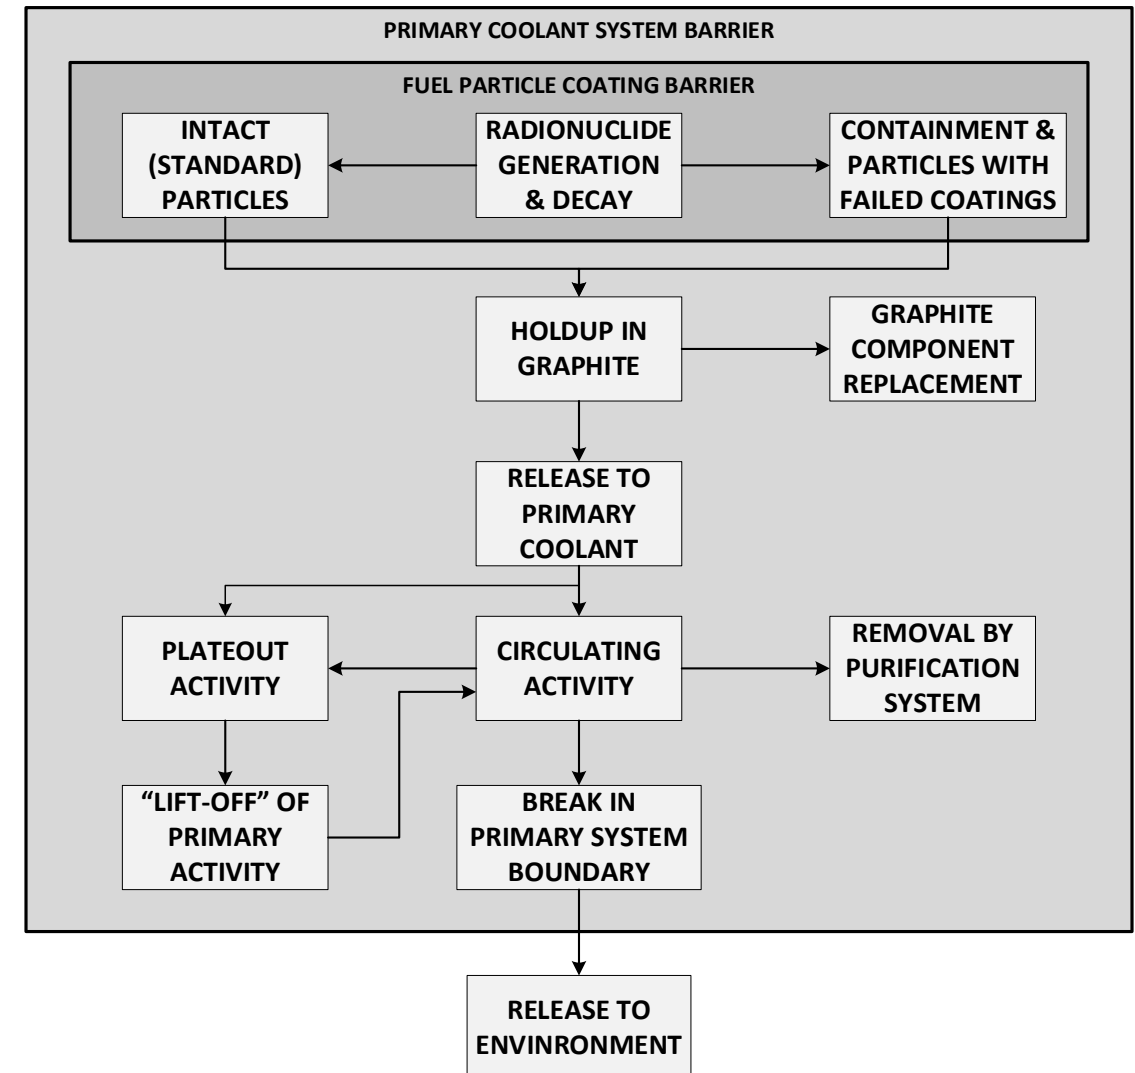

# The model is simple and versatile with a variety of user inputs and optional conditions.

## User Inputs:

- Radionuclide Inventories
- Temperature Profiles
- Failure Fractions
- Etc.

## Optional Conditions:

- Clean-Up Model
- Accident Model

Idaho National Laboratory

*Battelle Energy Alliance manages INL for the U.S. Department of Energy's Office of Nuclear Energy. INL is the nation's center for nuclear energy research and development, and also performs research in each of DOE's strategic goal areas: energy, national security, science and the environment.*
